PREFACE

ONE needs no longer to fetch an oracle, — *antiquam exquirite matrem*, for example, — in order to compel attention when one writes about the sources of language, literature, and institutions of the great English-speaking race. This volume aims to give an account of the founders of that race while they still held their old home, their old faith, their old customs; and the sole purpose of these “forewords” is to explain what materials and what method have been employed. The author has tried to free his text from cumbrous allusions, and to put into the notes material for wider study. These notes, as well as a portion of the introductory chapter, tell the reader what sources have been consulted in the making of the book itself. Quotations at second hand occur only where the authority from which they are taken is itself of the first class, such as Grimm on mythology, Müllenhoff on archæology, or Waitz on institutions. All quotations from the range of Early Germanic literature are at first hand, and the same statement holds good of classical

sources like Tacitus or Cæsar. Translations from Anglo-Saxon and German poetry have been made by the author; those from the Edda are in the majority of cases by Vigfusson and Powell, but are always duly credited.

F. B. G.

HAVERFORD COLLEGE, 21 December, 1891.

CONTENTS

CHAPTER I

INTRODUCTION..... 1

Germanic and Celtic in the English race—Appearance of the Germanic element in European history—Clash of Roman and German—Sources of information about the early Germans—Chronological and geographical data—*Germania* of Tacitus chief authority—The Ingævonian tribes.

CHAPTER II

LAND AND PEOPLE..... 30

The German in Germany—His former home—Inherited and actual culture—Country and climate—Pastures, flocks, and herds—Nomad or farmer?—Boundaries.

CHAPTER III

MEN AND WOMEN..... 57

Stature and features—A fair-haired race—Sense of personal beauty—Food and drink—Habits of daily life—Clothing—Adornments.

CHAPTER IV

THE HOME..... 90

Hatred of cities—Underground dwellings—Houses wooden and frail—Construction, and later improvements—The *burg*, and the hall—Descriptions in *Béowulf*—Banquet, songs, flyting, etc.—Amusements and vices—Hunting—The primitive house compared with modern dwellings.

CHAPTER V

HUSBAND AND WIFE..... 129

The husband a warrior, the wife housekeeper and farmer — Rights of women — Germanic chastity — Woman as sibyl — Her courage — Wooing and wedding — How far love was a factor — Dower or price — Ceremony of marriage — Punishment for infidelity.

CHAPTER VI

THE FAMILY..... 162

Hospitality and gifts — Responsibilities of the head of a family — Importance of kinship — Conflicting duties — Feud — *Wergild*, and other substitutes for feud — Paternal power — Exposure — Education of children — Names — Old age.

CHAPTER VII

TRADE AND COMMERCE..... 206

Household industries — The smith — Commerce — Exports — Amber — Myths relating to commerce and seafaring — Ships — Love of the sea — Money and bargains.

CHAPTER VIII

THE WARRIOR..... 226

Military service of two kinds — War the chief business of Germanic life — Courage — Types of the warrior — Cowardice — Germanic weapons — Armor — Cavalry — Importance of the infantry — Tactics of the army — The onset — Second kind of military service — The *Comitatus* — Its meaning in Germanic life and history — Age at which the German took up arms.

CHAPTER IX

SOCIAL ORDER..... 270

The king originally a creation of the race — His authority and duties — Inheritance and election — Ideals — The queen — Nobles by birth and by office — The Germanic freeman — The freedman and the slave — The alien.

CHAPTER X

GOVERNMENT AND LAW..... 289

Gifts, not taxes—Organization of government—Elements of monarchy and of democracy—Popular councils and assemblies—The town-meeting—Legal system—The function of priests in civil administration—Punishments for crime—Forms of law—Ordeal and trial by battle.

CHAPTER XI

THE FUNERAL..... 305

The weapon-death—Burning and burial—The former a primitive, Germanic habit—The mound or barrow—Its position—What was burnt or buried with the dead—Sacrifice of the living—Ship burials—The land of souls—Germanic horror of the grave—The elegiac mood in our poetry—Games and feasts at the funeral—Ceremonies at the burial of Attila and of Béowulf.

CHAPTER XII

THE WORSHIP OF THE DEAD..... 337

Germanic religion in general—Cult and creed—Heathen scepticism—Agreement of old and new faiths—Cult of ancestors, and superstitions about the dead—Survivals—All Souls—Swiss customs—Heathen rites made Christian—The patron-saint and the *fylgja*.

CHAPTER XIII

THE WORSHIP OF NATURE..... 366

Dualism in worship—Spirits of the natural world—House-spirits—Spirits of the air—The Mighty Women—Charms—The Wild Hunt—Spirits of the earth—Wood-spirits—Tree-worship—Water-spirits and well-worship—The Swan-maidens—Giants—Worship of the elements—Water, air, and fire—Mother Earth—Sun, moon, and stars—Day, night, and the seasons.

CHAPTER XIV

THE WORSHIP OF GODS..... 416

Germanic gods and goddesses—Evidence of their cult—The days of the week—Woden—Thunor—Tius—Nerthus, and the Ingævonian group—Other deities.

CHAPTER XV

FORM AND CEREMONY..... 440

Places of worship—Temples—Images and columns—Priest and priestess—Prayer, offering and sacrifice—Survivals—Divination and auguries—Runes.

CHAPTER XVI

THE HIGHER MOOD..... 472

Public and private standard of morals—Ideals of the race—Æsthetics—Germanic faith—Notions about a future life—Conclusion.

GERMANIC ORIGINS

A STUDY IN PRIMITIVE CULTURE

*“Under the drums and trappings of three
conquests. . . .”*

SIR THOMAS BROWNE

GERMANIC ORIGINS

CHAPTER I

INTRODUCTION

Germanic and Celtic in the English race — Appearance of the Germanic element in European history — Clash of Roman and German — Sources of information about the early Germans — Chronological and geographical data — *Germania* of Tacitus chief authority — The Ingævonic tribes.

WHO were the founders of our race? Working backwards, up the stream of national descent, we come to the great influx of Norman people, Norman words, Norman ways; and we stop to reckon with this fact in the development of English life. A very brief study, a few minutes of consideration, assure us that here are no founders of England, but only generous contributors; immigrants we may call them, who brought along valuable property, and furnished us with some new and desirable elements of civilization. Again, and for still stronger reasons, we reach the same conclusion with regard to that earlier conquest of England by the Northmen. The Danes gave us a few words, — the common vocable “are,” for example, — a few customs, a few laws; and that is the whole

story. It lies, therefore, between the Celts, the people whom Cæsar found in his Britain, and the Germanic invaders and conquerors who seized upon the island when the Roman legions were withdrawn. Of these two claimants, the latter race is recognized by history and criticism as furnishing the real foundation of our national life. True, there is more or less opposition in the matter of actual descent. We are Germanic in our institutions, concedes Professor Huxley; but the race itself is at least half Celtic in its blood. "Not one half," Mr. Grant Allen is inclined to think, "of the population of the British Isles is really of Teutonic descent;" and he carries the battle into still remoter territory when he concedes our language to Germanic origins, but claims our literature, especially the imagination displayed in it, for Celtic influences. Furthermore, the greatest of our critics in literary matters, the late Matthew Arnold, has broken a lance for this Celtic influence in our national development, and is half inclined to answer the question, "What is England?" by saying, "A vast obscure Cymric basis with a vast visible Germanic superstructure."¹ In particular, Arnold attributes so high a quality of our literature as its humor — and what quality is so peculiarly its own, so triumphantly its own? — to the dash of Celtic impulse and fancy, clashing with our Germanism.² And he goes on to say, that our poetry probably got its turn for style, probably its turn for melancholy, and certainly its "natural magic," from the Celtism in our character. Such statements as these from a man who on his own

¹ *On the Study of Celtic Literature* (Macmillan & Co., 1883), p. 64.

² *Ibid.* p. 101.

ground had no rivals deserve most careful consideration. Arnold, however, is off his own ground when he asserts that rhyme, which he calls the main source of the romantic element in our poetry, "comes . . . from the Celts." Kluge has shown, in an article dealing with strictly scientific evidence, that our Anglo-Saxon poetry, which already possessed that form of rhyme loosely called alliteration, was in its own fashion developing that form which we commonly understand when we use the general term.¹ Now this mistake of Arnold's, trifling as it may be, shows us the need of very severe tests when we attempt to pass judgment on questions so intricate and rooted in such difficult and distant soil. It is a little too loud protesting when Mr. Grant Allen, though he may well be quite in the right, lays down the positive law that "our modern poetry" — and *a fortiori*, our prose,² — "is wholly Romance in descent, form, and spirit." We are tempted to ask Mr. Allen for definitions, for sources, for proof. It is just the same hesitation that besets us when he says that while our social and political organization must be regarded as Germanic, this Germanic element did nothing for our culture, which is "wholly Roman."³

¹ *Ibid.* p. 120; Kluge in Paul-Braune, *Beiträge zur Geschichte d. deutschen Sprache u. Literatur*, Vol. IX.

² Anglo-Saxon prose is vigorous, and sometimes, as in Ælfric, not without a certain compactness and form. But every one knows that the best qualities in the older period of English prose — as in Hooker or Milton — were Latinistic, and that the best qualities in the later period are distinctly indebted to the French.

³ See Grant Allen, *Anglo-Saxon Britain*, pp. 106, 224, 227. For the other side, see Professor Freeman, — who opposes "the witness of speech" to "the witness of skulls," and insists on the continuity of our race from Schleswig to New England, — in his *Four Oxford Lectures*, 1887 (Macmillan & Co., 1888), especially pp. 71, 78, of the lecture on *Teutonic Conquest in Gaul and Britain*.

Granting all that these critics claim, we find in their concessions of speech, custom and law, broad enough basis for our assumption that the Germanic race is the source of English life, and that the Germanic invaders of Britain may fairly be styled founders of England. Moreover, in regard to the disputed territory, while we feel sure that Arnold has considerable justice in his claims for Celtic liveliness as a factor in the imaginative qualities of our literature, we do not wish to see the Germanic element fairly elbowed out of our poetry. We are willing to concede that Prospero found his Ariel on the island; but what shall we say of Prospero himself?

Vom Vater hab' ich die Statur,
 Des Lebens ernstes Führen,
 Von Mütterchen die Frohnatur
 Und Lust zu fabuliren, —

sang Goethe of his own "origins"; and father Germanic and mother Celtic may have contributed the same elements in the case of English poetry. But Mr. Grant Allen says that our Germanic origin gave our literature "patience and thoroughness," and nothing more.¹

It is little better than beating the air to argue in general terms against these random conclusions. It is a question of facts; and we must first of all inquire how we can best reach the facts. We could take that complex mass which we call English Literature, and by a grand *Quellenjagd*, such as the modern German loves, spread origins and sources over every land and time. It is easy with a certain facility in tailor-lore

¹ *Ibid.* p. 229.

to show how oddly this literature is "suited," to trace the doublet to Italy and the round-hose to France, — pretty sport and often profitable, — but how is it with the flesh and blood of literature? Is the heart of our literature Germanic or Celtic? Or is it neither? Is it rather the result of classical or even Romance traditions? How can we so much as begin to answer these questions until we know what "Germanic" means? If we wish to know what elements in our literature or our life we ought to refer to the Germanic invaders of Britain, it is of prime importance to study this Germanic invader in his habit as he lived. He is the subject of these pages; and it is to be hoped that a view of him, in different types and periods, may leave some general impressions — we may not hope for a sharp picture — of the Germanic character.

Our knowledge of the early German must be derived from three main sources, — the accounts of his foreign contemporaries, the early literature of Germanic races, and survivals; the *Germania* of Tacitus, our Anglo-Saxon *Béowulf*, and the church festival of All Souls, are respectively examples of the three sources. In all of these classes our material must be sifted with extremest caution, but particularly in the second and third. No direct literature remains to us from the Germans of Tacitus, and the songs¹ about god or hero which they chanted in those early days have perished quite beyond the faintest hope of recovery. But heroic legend was richly developed by the Germans of the "Wandering," the period when Roman and barbarian were opposed in the hottest struggle;

¹ Tac. *Germ.* II.; *Ann.* II. 88.

and these legends have passed with more or less purity into early Germanic literature. The Christian setting often contains a purely heathen jewel.

Evidently, with material scattered over so great a stretch of time, one is in danger of rescuing no old German at all, but rather of holding up a bit of literary patchwork, a veritable scarecrow of ill-matched garments passing for a man. The danger is real; but it must be remembered that a type is far easier to establish for primitive than for modern times. Facts have wider bearings and life is more uniform of tone, the further we go back in history. Early times lacked diversity of employment, fine divisions in the drift of thought and feeling. It is civilization which brings out the individual and lays emphasis on his importance, — consider the “interview,” — which creates distinctions, and puts a thousand angles of vision to-day for a hundred in the past. One reason why Shakspeare seems so much more modern than Chaucer is that the latter still drew types, while the former drew men and women. The Squire becomes Romeo, and the Wife of Bath yields to Mrs. Quickly of Eastcheap. What we must particularly avoid is to confuse types, to treat on one plane the German of Tacitus and the German who has absorbed elements of classical and Christian culture. The players of the fifth act must not be huddled in one group with the simple and hardy characters who open the action and set the play upon its path of development. First of all, moreover, we must glance at the stage itself on which our German made his rude and clanging entrance; we must study the scene.

Civilization in the first centuries of our era re-

volved about the Mediterranean, where a complex of races was held together by the organizing genius of Rome. But the Roman state was in decay; its lack of moral greatness combined with certain political and physical defects to bring about what a French scholar has called the "mortal illness" of epochs which are destitute of lofty aims and firmness of conviction. The slow "death of Rome,"¹ consequence of this malady, may be said to begin with the invasion of Alaric in 402, and to end with the invasion of Alboin in 568. With the latter name we touch mediæval literature; for Alboin is mentioned in our oldest piece of Anglo-Saxon poetry, in the curious medley of description and memories put into the mouth of an ideal Germanic minstrel, Widsith, "the far-wanderer."

When the historian begins to reckon the causes of downfall, he has the right to put first and foremost the general corruption of the age. But, as was just now hinted, there were other and specific causes,² such as thriftless administration of public and private property, excess of taxation, and high cost of living. The individual was crushed by the dead weight of imperial organization. Trade and manufactures must needs languish; science led to no practical results; and there was absolutely no material progress to keep pace with wider responsibilities. As Hehn remarks, the empire stretched further and further, and yet Roman ships remained what they always had been, coasting vessels, unable to contend with the perils of winter or the open sea. Where commerce did find

¹ Hodgkin, *Italy and her Invaders*, I. 3.

² Best summed up by Victor Hehn in his wholly admirable book *Culturpflanzen und Hausthiere in ihrem Uebergang aus Asien, u.s.w.*, 4th ed., Berlin, 1883, p. 394 ff.

its way, it gave no spur to invention, and accomplished little for the arts of life; like the sailor, the farmer clung to the methods and implements of his forefathers. In the world of mind it was no better, and literature gradually lost itself in rhetoric, its only remaining form. A deep scepticism prevailed, stifling all creative joy; the old gods were merely excuses for a priesthood, objects of a cult in which no one really believed.

Over and through this outworn civilization swept two great waves, — Christianity from the east, Germanic invasion from the north. In one sense, both of these movements were hurtful to literature; for the invaders doubtless annihilated a mass of precious material, and what they spared was often the prey of monkish bigotry.¹ As a piece of revenge, the answering wave of culture, the reacting civilization which carried rudiments of criticism and letters among the barbarians, went far toward destroying whatever native elements of literature were to be found. The spirit of Christianity rudely checked the development of the heathen epic poetry; and such song as had reached form and substance was put under ban. The Frankish or Saxon monk disdained in most cases the artless poetry of his vernacular; and in the hands of the monk lay all destiny of letters. Still, in that general wreck of literature, it was Christianity which

¹ See the famous story of the Athenian libraries which the Goths were about to burn during a raid into Greece, near the end of the third century. It is told in Gibbon's *Decline and Fall*, Chap. X. The "bigotry," by the way, was not always "monkish." Under Valentinian and Valens the persecutions on account of supposed "magic" involved the destruction of a vast amount of philosophical and classical literature; and this was a political, not simply theological persecution. See Gibbon, Chap. XXV., and Hodgkin, *Italy*, I. 40.

manned the only life-boat. Christian zeal rescued many precious remnants of classical culture, keeping them for a time that could use and value them aright. Patriotic monks were here and there found who would set down the songs and legends of the fatherland, notwithstanding occasional survivals of heathendom which crept between the lines, — so we have a *Béowulf*, a Lay of Hildebrand; or else the old subjects were treated in the new style, as where German Ekkehard sings in vigorous Latin hexameters the story of Walter and Hildegund.

This last example brings us to the greatest service which the church ever did for the cause of letters. It established a neutral ground on which classics and barbarism could in some manner join hands and so save what was best in each. Christianity inspired an international literature. Despised by the learning of a riper age, this literature nevertheless saved the classics and preserved those early records of the Germanic nations which we now value beyond price. To it we moderns owe what a great scholar owes to the simple books and lessons of his first school-days. With its universal medium of Latin, it controlled and shaped the beginnings of every literature which arose in the states of Europe. Its great advantage was universality; its defect was monotony. It already realized, as Ebert points out,¹ the later dream and longing of Goethe for a World-Literature; but it lacked the vitality of a national consciousness, is everywhere the same, and has an air of saying its lesson, — not always too

¹ The standard work for this subject: Adolf Ebert, *Allgemeine Geschichte der Literatur des Mittelalters im Abendlande*, 3 vols., Leipzig, 1874-1887.

fluently, — after its teacher.¹ This Christian Latin literature was the village-school of learned Europe; but while it trained, it could not create. The vital power of mediæval literature lay in the poetic impulses of old Germanic life, — we are speaking here of the northern nations alone, — in that joy of “singing and saying” which our forefathers brought out of their forests. The original songs have vanished. One lay about Arminius, such as Tacitus assures us was sung in his time, were worth its millions. But the later legends, which sprang up with the national consciousness in the victories over eastern and western Romans, still keep the early note and give us some of our best material for studying the ancient German. True, they are inspired by contact with civilization, but the contact calls out a national and original utterance.

It is in the first flush of Germanic conquest, in the clash of a fresh, ignorant race with a corrupt, outworn but highly civilized race, in the awakening of national consciousness, that we should like to make our picture of the ancient German. But such a picture is no easy affair. The clash of Germany and Rome lasted five hundred years; and the Goth had grown as civilized as the Romans at a time when his Saxon brother was still the barbarian of Tacitus. We must look to our historical and geographical perspective.

The pressure of Germanic invasion which finally burst the barriers of Rome was not altogether spon-

¹ “One feels,” says Müllenhoff, “that the early middle ages wore another color and spoke another speech than we find in their chronicles and documents.” *Deutsche Alterthumskunde*, Vol. I. Vorrede, p. v.

taneous. For a long time previous to the fall of the empire, there had been a restless movement in the heart of Germany; and while we find some explanation for this in the nomadic character and military instincts of the race, we must attribute no small share to the pressure of Huns and other tribes upon Germans of the east and north. The actual "movement of the tribes," or *Völkerwanderung*, is usually referred to a round century from the flight of the West-Goths into Roman territory, — they were driven by the Huns, — until the fall of the Western Empire.¹ The late Professor Scherer tells us² that the historic consciousness of the Germans dates from this movement; and we may say that it was during this entire period that German after German came out of his barbaric environment and took up that strange battle between an old civilization and a new race in which each is victor and each is vanquished. It is in this period that we have the real conflict between Roman and German, a struggle along the entire line and fought for life or death; but there had been many a previous encounter. Southern Aryans first heard of their kinsmen in the north, not so much by conquest, as in the peaceful way of trade. Müllenhoff is of opinion³ that nearly all the supply of tin came from Britain, and that the trade began in times too early for computation. Tin was needed for the making of bronze; but another eagerly sought article was valued for itself. Amber — it is mentioned in the *Odyssey* — was in all probability the means of putting Greeks in communication with the shores of

¹ See F. Dahn, *Bausteine*, I. 282.

³ *D. A. I.* 211.

² *Geschichte d. deutschen Lit.* p. 22.

the Baltic, and with the Germanic tribes who lived there. Greek coins of the fifth and sixth centuries before Christ have been found near the Baltic; but in Müllenhoff's opinion, commerce at that time was indirect, and articles were forwarded from tribe to tribe. The first person, therefore, who brought to the Greeks a definite knowledge of the north, was Pytheas of Marseilles, a Grecian geographer of the fourth century before Christ, who "followed the old path of the Phœnicians," and was an eye-witness of the tin-mining processes in Britain.¹ He went further. We may assume, concludes Müllenhoff, after a most elaborate investigation, "that Pytheas saw with his own eyes the islands and shores of the North Sea, passed the mouths of the Rhine, and the boundary between Celts and Scytho-Teutons; but found it best to push no further among unknown races, and so contented himself for the rest with what he heard of them."²

Thus, so far as we know, came the first tidings about our ancestors to the ancient world. Their first actual appearance on the border of the civilized countries about the Mediterranean, is not definitely settled. Müllenhoff thinks the Bastarnæ were Germanic, a tribe mentioned by Tacitus and Pliny; they appeared on the lower Danube about the beginning of the second century before Christ. A king of Macedonia

¹ Müllenhoff, *D. A. I.* 375, 472. "The Humboldt of antiquity," as Pytheas is called, is also discussed, with less critical knowledge, by Elton, *Origins of English History*, p. 6 ff. It should be added that Professor Rhys, *Celtic Britain*, p. 47, says there was no direct trade between Cornwall and the continent, and adds that there is no "scrap of evidence, linguistic or other, of the presence of Phœnicians in Britain at any time."

² *D. A. I.* 495.

is said¹ to have sent an embassy to them and to have asked them for troops as allies. According to Müllenhoff, the Bastarnæ came from the neighborhood of the upper Vistula, attracted by southern fertility; in the third century of our era they vanish utterly.

Next of Germanic races to tread the tempting but perilous path southward were the Cimbrians and Teutons. A large part of the second volume of Müllenhoff's great work on German Archæology, the *Deutsche Alterthumskunde*, is devoted to a searching investigation into the details, scanty and disconnected as they are, which Greek and Roman writers have left us in regard to this movement, — a movement which, like the battle of Marathon, though less decisively, struck into the very heart of history.² Müllenhoff makes³ it strongly probable that these tribes were Germanic, and that their names — for the later term 'Germanic' was not used at Rome till about 80 B.C.⁴ — were given to them by neighboring Celts. Cimbrians⁵ may be translated "robbers," and Teutons "bands," or "multitudes." They came, after a succession of Celtic movements had left vacant tracts between the Weser and the Rhine, from the old home of the Germans, a region bounded by the Oder, the Harz mountains, and the Thuringian hills. Till a couple of centuries before Christ, if Müllenhoff is right, this girdle of

¹ For references, see Zeuss, *Die Deutschen und ihre Nachbarstämme*, p. 129. Zeuss says without reservation: "Die Bastarnen sind das erste deutsche Volk welches auf dem Schauplatze der Geschichte auftritt. . ."

² The author reminds us that it is now about two thousand years since that Cimbrian terror heralded the Germanic invasion of Europe.

³ *D. A.* II. 207.

⁴ *Ibid.* II. 189.

⁵ The name has nothing to do with "Cymry," etc. *Ibid.* II. 116.

primeval forest¹ had separated the Germans from the Celts. Now they broke their bounds and streamed southward, the Cimbrians a swarm made up from various tribes along the middle Elbe,² the Teutons mainly from the coasts of the North Sea. The Romans had a tradition that this great invasion was caused by floods, which drove Cimbrians and Teutons out of their homes "in the uttermost parts of the earth."³

What havoc they wrought in Italy we know from Livy and Plutarch.⁴ Rome was saved at Aquæ Sextiæ by the genius of Marius; and the great barbarian wave melted away to the northward almost as suddenly as it had come. Not very long afterward, however, a kinsman of Marius, bent on the conquest of Celtic Gaul, found, across his path and intent on the same errand, an army from east of the Rhine, the hordes of Ariovistus the German. Cæsar was quick to see that here was the deadliest foe of Rome.⁵ The destruction of the Suevians, the Rhine-bridge, the legions led upon German soil, are evidences of Cæsar's greatness as statesman as well as soldier. His achievements not only furnished a model for the few victorious campaigns of his successors, not only saved Gaul to the Romans, but in the judgment of competent men, prolonged by centuries the very existence of Rome

¹ See also Kiepert, *Alte Geographie*, p. 535.

² *D. A.* II. 289.

³ Dahn (see next note) finds this notion credible.

⁴ A vivid account of the invasion is given by Dahn, *Urgeschichte der germanischen und romanischen Völker*, in Vol. II. Of course, Plutarch's *Marius* is the most detailed ancient account.

⁵ Read, *Bell. Gall.* I. 33, his own words upon this danger to his country. Chapters 43-46, describing the interview of Cæsar and Ariovistus, have high dramatic interest.

itself. There is something almost theatrical in that opening clash of arms between the conquerors of the world, with perhaps the greatest of all generals at their head, and a mass of half-naked barbarians, — in this beginning of a war which lasted for five hundred years, which saw the old world with its arts and learning go down in wreck, and the new world arise in all its incompleteness and rawness, but in all its immense and eager vitality. Rude as they were, these Germans henceforth held a foremost place in the eyes of statesmen who knew how to estimate the perils of the empire. Germans were sought as soldiers, as allies; the two nations came in touch; what Germans were and what they did became a matter of interest. Cæsar fixed his keen eye upon them; a century or so later came Tacitus and studied them. Roman statecraft now bought, now fought, but always kept planning the destruction of such unwelcome neighbors. At first, Drusus and Germanicus almost completed Cæsar's policy of conquest; but later this was given up, and a system of border fortifications¹ threw the Germans back upon themselves, brought about their solidarity, checked the old nomadic driftings of the tribes, and organized them into nations. Four centuries of wars and treaties, bribes and bargains, — the Germans fighting together against the Romans, as allies with the Romans, and against one another, — must have sent a vast amount of civilization, both for good and for evil, across the

¹ The so-called *Limes* ran from about the junction of Lahn and Rhine to a point near the junction of the Altmühl and the Danube. This line was held by the Romans for two centuries. See Arnold, *Deutsche Urzeit*, p. 81 f.

Rhine. Indeed, most of the early lessons which Germans learned of Rome seem to have lain in the direction of perfidy and bribes. "We have taught them," even Tacitus could say, "to take our money;"¹ and they soon became skilled in the art of selling a treaty, and of breaking it. Vellejus² says that the Germans, for all their barbarism, are thoroughly sly and seem born for lying and deceit. But this opinion is provoked by the victory over Varus. (Large bodies of soldiers were formed who lived along the Roman border, separated from the good influences of home and family,³ and exposed to all the vices of mercenary warfare; centuries of this life must have destroyed much of the old Germanic virtue.) The low-water mark of Germanic morals was reached by the Merovingian Franks. Stubbs does not seem to think that much change was wrought in Germanic character during the early part of the period we have described. The institutions of our forefathers, he believes, remained practically the same for the two centuries succeeding the time of Tacitus; "nor is there any occasion to presume a development in the direction of civilization."⁴ Much of this may be true for the remote tribes, for Angles and Saxons; but the border

¹ *Germ.* XV.

² II. 118.

³ See Loebell, *Gregor von Tours*, 2d ed. p. 75 f. A description of certain German tribes, who were still heathen, and whose virtues are held up to the dissolute Christians of Rome and Gaul, is often quoted: "Gothorum gens perfida, sed pudica est [the Goths held the Arian heresy], Alamannorum impudica sed minus perfida. Franci mendaces, sed hospitales, Saxones crudelitate efferi, sed castitate mirandi." That is, the Goths are faithless but chaste, Alamannians unchaste but less treacherous, Franks liars but hospitable, Saxons ferociously cruel but of admirable chastity. Salvianus, however, has a suspicious leaning toward antithesis. See Grimm, *Deutsche Mythologie*, 4th ed. III. 1 f.

⁴ *Const. Hist. England*, I. 37.

and interior tribes of Germany must have changed greatly, and some faint ripple of these changes may have reached the north. Victor Hehn, in the admirable book already quoted,¹ says that the Romanizing process began before the movement of the tribes; and he calls attention to the great part played by Belgium in mediating between culture and barbarism.

With the overthrow of the empire we have a leveling of walls and dikes, a rush of strange elements in each direction. Barbarians sit on the throne of the Cæsars, and Roman laws are current in the forests of Arminius. Over all is the mediation of the new faith. Wattenbach reminds us that while later accounts attribute the spread of the Christian religion to individuals, apostles like Boniface or bishops and missionaries like Augustine, in reality much was done by persons of no name or fame, — merchants, soldiers, laborers, — converted men, who worked in many places and with great effect.² We can extend this humble but potent influence to other fields. Culture of every kind must have been carried in this fashion to all parts of northern Europe, which were open to Roman and German.

Enough has now been said to show that our typical German, like Plato's ideal horse, is a very difficult matter to define and draw; and, indeed, he has been drawn in every shade from absolute savagery to a graceful and accomplished person, as unlimited in courtesy and intellect as in muscular development, who "cultive ses jardins, les vertus et les arts." Jacob Grimm had some indulgence for this nobler

¹ p. 403.

² Wattenbach, *Deutschlands Geschichtsquellen im Mittelalter*, 5th ed. p. 37 f. See also Winckelmann, *Geschichte der Angelsachsen*, p. 22.

type; and while one would rather err with Grimm than be right with Adelung, one must nevertheless admit that love for the Germanic past has sometimes carried even the greatest scholar of our century too far. There are two assumptions. One is that the German of Tacitus was a mere nomadic barbarian, and all attributes of civilization found in him a few centuries later are the result of contact with Rome. The other assumption clothes the primitive German with these same attributes,—that is, with the virtues and mental habit, if not with the accomplishments, of civilization. The advocates of both theories can find in the chaos of material whatever facts they need. In recent times, modern savage life has been heavily drawn upon to supply pictures of early Germanic culture. It is the disciples of ethnology who depict our ancestor in such a degraded guise; while the philologists still paint a portrait that glows with too many hues of civilization.¹ Of course it is the point of view that is continually shifted with such disastrous results. What an enormous difference between the Germany of Boniface and the Germany of Tacitus or Cæsar! We turn from the idle, half-naked brawler of the *Germania*, the chieftain of Tacitus, to Theodoric the Goth quoting Tacitus himself on the subject of amber . . . “*Cornelio scribente*,” he says, just as any Roman would give us a line of Virgil.²

¹ Wackernagel thought a fair mean could be obtained by taking the civilization of the Greeks as described by Homer, and assuming the same stage for primitive Germany. See *Kleinere Schriften*, I. 2.

² The king—through Cassiodorus—is thanking a tribe by the Baltic for certain gifts of amber. See Cassiod. Var. V. 2, quoted by Dahn, *Bausteine*, I. 17.

Basis of our description must be the *Germania* of Tacitus. But we are justified in adding to this picture those traits of Germanic temperament which were developed under pressure of the later struggle with Rome. Thus the virtues of Siegfried are not classical or Roman virtues; they are the attributes of an ideal German of the warrior type, blending with conceptions of the Germanic myth. But where are we to stop in this process? Where shall we draw the line which separates Germanic from Christianized and Romanized Germanic? The answer is involved in the question. Christian faith and Roman culture, from the time of the tribal movement on, went hand in hand; and where the German stands hostile to these, he must retain most of his primitive characteristics. Now the West-Goths were converted in the fourth century, about 375, then the East-Goths and Vandals; early in the fifth century the Burgundians, later the Franks; in the sixth, Alamannians and Lombards; Bavarians in the seventh and eighth; Frisians, Hessians, and Thuringians in the eighth; Saxons in the ninth. This is for the Continent. Anglo-Saxons were converted about 600, and took the lion's share in converting their continental brethren. Scandinavians accepted Christianity in the tenth and eleventh centuries.¹ It is evident not only that these tribes must have varied in the extent and accuracy of their heathen traditions, but also that we are at liberty to use primitive material even when we find it covered with more or less theological varnish

¹ Legend said that King Arthur had conquered and Christianized Norway and Iceland, and it even went so far as to make the apostles themselves carry the gospel to Scandinavia.

from the hands of a monkish scribe. Moreover, let us remember that the epoch of heroic legends was closed about the end of the sixth century, when at least half the Germanic tribes were unconverted. The Angles, Saxons, Jutes, and perhaps Danes, who conquered and settled Britain in the fifth century, were absolute heathens; and it needed three hundred years more to bring the gospel to those swamps and forests which stretched along the German ocean and into the Cimbrian peninsula. The continental Saxons had the reputation of great conservatism, and up to the time of the exodus to Britain had wandered least of all the Germanic tribes.¹ We must therefore be careful to abstract from our notion of the Germanic settlers of England whatever traits, found in the continental German, are to be ascribed to a long contact with Christianity and Roman culture.

Chronology in some wise determined, and enough historical perspective assured for our purpose, we need to fix clearly the geographical limits and divisions of Germany. All work done in this field rests, in the first instance, on the information given us by Tacitus; and we must face the question of credibility. What of the *Germania*? There have been doubts raised regarding the trustworthiness of this book, none, perhaps, going so far as a general denial, but in one instance at least, making, if successfully proved, utter havoc of all foundation for the modern historian. In Dr. Latham we have the most outspoken enemy of the *Germania*; he assails its ethnography and opposes its statements. "Much," he says, "which is

¹ Dahn, *Urgeschichte der german. und roman. Völker*, II. 307.

held to be German is Slavonic," and he insists that there were "Slavonians from the Teutoburger Wald to the Vistula."¹ These assertions of Dr. Latham are rejected utterly by modern criticism. There is, however, another sort of opposition, not yet silent, which attacks not so much facts as motives. Most energetic in this respect is the commentator Baumstark, who has somewhere spoken of the "rose-red romanticism of the sickly sentimental Tacitus," — in troth, my captain, bitter words! And another writer, but of a very different school, Lippert, the follower of Spencer, tells us that Tacitus, for the sake of the moral effect upon his countrymen, makes out of every German necessity a German virtue, and so gives us a quite false picture of German civilization.² That is no new accusation. The poet Heine speaks of hearing E. M. Arndt lecture on the *Germania*, and to our satiric young Hebrew the enthusiastic professor seemed to "seek in old German forests those virtues which he missed in modern drawing-rooms."³ Moreover, the same Heine, in a less playful mood, compares the *Germania* with Madame de Staël's book *De L'Allemagne*, and thinks the former "a satire on Rome."⁴ Are we, then, to regard this study of the Germans as partly an idyl and partly a political pamphlet? Is it a Roman "Utopia"? There may be some justice in this conclusion. One recent writer has based it upon a critical study of the method employed by Tacitus, and shows, or tries to show, that

¹ In Kemble's *Horæ Ferales*, pp. 1-35, and especially p. 47.

in the arrangement and description of the different races of Germany,¹ the Roman historian was governed mainly by the idea of artistic grouping and picturesque effect.² Much of this claim may be granted. True, so great an authority as Waitz insists³ that Tacitus wrote purely as a historian, and not as a moralist. But we may concede something to the artist in Tacitus. It is likely enough that he cared more for his coloring and contrasts than for the accuracy of his line. He paints the Chatti ferocious to a fault, the Chauci full of the fruits of peace. But granted that he purposely arranges his models, and here or there exaggerates their peculiarities, no one can doubt that the group as a whole is true to nature. His chief sources of information were the works of Sallust, Cæsar, Livy, and Pliny the Elder, in addition to the reports of officers and soldiers who had served in Germany. It is hardly likely that Tacitus saw much with his own eyes; but as politician and office-holder he had many indirect opportunities of studying his subject. After the fiercest possible light has beaten for centuries upon his work, the author of the *Germania* is hailed by modern criticism as a keen observer and an accurate historian.

The name "German" has given rise to a great deal of discussion. It seems to be of Celtic origin, and may mean either "neighbors" or "those who shout in battle." Tacitus explains it to be of late origin

¹ *Germ.* XXVI.-XLIV.

and due to the fact that a tribe, in his day called "Tungri," but earlier known as "Germani," crossing the Rhine and driving away the Gauls, had brought it about that the name of a single tribe was extended to all the race.¹ It is reasonable enough that a race should get its name from abroad. Jacob Grimm remarks² that names of tribes, like names of human beings, are given to them by others: "the need is greater to name a third person than to name ourselves." Still, the Germans had a sense of relationship, even if they lacked "solidarity."³ Long afterwards, they called their own tongue "belonging to the people,"—in Anglo-Saxon, *theodisc*, as opposed to "Welsh," the talk "of the stranger." It was long a favorite gibe with Englishmen that the fiends in hell spoke this latter language; and from a passage in the Anglo-Saxon Life of St. Guthlac (in prose), down to Hotspur's remark: "Now I perceive the devil understands Welsh," this notion held both in jest and in earnest. Dunbar, the Scottish poet, refines the fun a little by making even the devil rebel against the hideous Gaelic of his followers.⁴ To this day, Germans call Italy "Wälschland." The names of the different tribes or clans were gentile, sprung from the family system.⁵

¹ *Germ.* II., a much disputed passage, but clear in the fact, if not in the reason for the fact. The best recent summary of criticism is by Müllenhoff, *Deutsche Alterthumskunde*, II. 198 f. See also Baumstark, *Germania*, 100 ff.

⁵ Stubbs, *Const. Hist. England*, I. 38. Compare further Birmingham, Walsingham, etc., also the names of tribes in the *Widsið* Lay.

How much territory the Germans occupied in the first century of our era is stated with sufficient clearness by Tacitus. "Germany as a whole,"—that is, Greater Germany, east of the Rhine, not the Gallic provinces called Germania,— "is sundered from Gaul, Rhætia, and Pannonia by the rivers Rhine and Danube, from Sarmatia and Dacia by mutual fear or by the mountains: the rest is bounded by Ocean, which flows around broad peninsulas and huge islands."¹ In this description it suited the political purposes of Tacitus, so conjectures Müllenhoff,² to leave Germany practically unlimited in at least one direction; else the Vistula would have been given as a boundary. Moreover, for artistic reasons it may be, Noricum is also omitted from the contiguous countries. Still, the general facts are clear enough.

Within the territory named, Tacitus informs us, the population of Germany may be divided into three groups: the Ingævones (or Ingvæones) who lived nearest the ocean; the middle race of Herminones; and in the south the Istævones (or Istvæones). Pliny adds another group, the Hilleviones; these Zeuss assigns to Scandinavia.³ The fact that these three continental tribes have names which are bound together by rhyme — so-called "alliteration" — in the well known Germanic fashion,⁴ makes their genuine character extremely probable. The traditions which held together each of these groups were probably of

¹ He seems to think North Germany full of islands, and long after his time Scandinavia itself passed for the greatest of them.

a religious nature, and were retained in a common cult.¹ The Ingævones, our own ancestors, held Ingvas as father and founder of our race; and we find Ing mentioned, seemingly as a god, in the Anglo-Saxon Rune-Lay. Ermanas and Istvas were similarly the founders of their respective clans. The three names, if we may follow Müllenhoff's interpretation,² mean "He who is come," "The exalted one," "He who is desired and honored." In ancient song, says Tacitus, our forefathers record (*celebrant*) these three as sons of Mannus, the original man, himself son of Tuisto, whom Tacitus calls "a god born of the earth," *deum terra editum*. In this way the clans about the North Sea and along the Cimbrian peninsula, though hardly a united political body, felt a close tie of kinship. It was emphatically a sea-loving race, — Frisians, Angles, Jutes, Saxons: these are our forefathers, together, it is probable, with a few of the Danes. It is significant enough that Saxons, Danes, and Normans made the three conquests of Britain.

Let us glance a moment at the separate tribes of these three groups. In the first and second centuries after Christ,³ the Saxons were settled on the right bank of the Elbe opposite the Chauca, with Reudigni and Anglii north of them and running well up into the peninsula. Southeast of the Saxons and east of the Langobardi were the Suevi-Semnonnes. Scandinavia was already settled by Germanic tribes. The Goths were still on the right bank of the Vistula,

¹ Waitz, *Verfassungsges.* I. 15, thinks the division was based on linguistic differences.

with Slavonic and other neighbors on the east and northeast. Such was the situation in the earliest centuries of our era. Then came the great movement of the tribes, which changed completely the positions of many German nations; but Frisians, Angles, and Saxons held their ground. The latter had long been known as desperate pirates,—in fact, as early as the second century. They gave the name to that “Saxon Shore” of Britain, and made necessary the appointment of a *Comes Litoris Saxonici per Britanniam*, one of the most important officials of the empire, with his “nine strong castles dotted along the coast from Yarmouth to Shoreham.”¹ These Saxon pirates, with their Frisian and Anglian neighbors, clung to the coast, while the Goths were wandering from the mouth of the Vistula to the shores of the Black Sea, or while the Lombards made their slow way to Italy.² The sea-myths of the latter tribe were changed to suit an inland life; what was once an ocean legend was forced to adapt itself to the tamer scene of a river.³ As our forefathers had been, so they remained; and it was no new path they sought, when, about the time that Attila was crushed upon the Catalaunian plains, these heathen Germans were “driving their foaming keels” over the North Sea towards the coast of Britain, no longer pirates, but invaders, conquerors, settlers. Nor need we assume

¹ Hodgkin, *Italy*, I. 228.

² Possibly the three families of Ingævones, Herminones, and Istævones failed to keep strict lines in this general movement. Possibly some of the later groups, like Franks or Thuringians, may have been formed from two of these divisions. See Arnold, *Deutsche Urzeit*, p. 125.

³ The story of Lamissio, Paulus Diac. I. 15, and Müllenhoff, *Beovulf*, 10 f.

any pressure from enemies at home, the Danes for example, as sending our forefathers into exile.¹ They were men of their hands, and had that love for fight and adventure, that habit of seeking war afar if they could not find it at their doors, which Tacitus records of the Germans at large. Indeed, the Ingævonian race is early known in history. The Romans had no more dangerous foes and no more valued allies than the men of this same strain. Thus the Frisians, to whom we are closely related, are first mentioned during the campaigns of Drusus; with the Batavians, they dwelt on the northwestern coast of Europe, near the mouth of the Rhine.² They threw off the Roman yoke and were free and unmolested until the year 47 A. D. Again they fought, and were enrolled against Rome in the revolt headed by Civilis.

The large and powerful tribe of the Chauci were also first known through the expedition of Drusus.³ They lived on both sides of the Weser, where they were seen by the elder Pliny; they stretched over a large territory which, says Tacitus, "they not only hold, but fill (*implent*)."⁴ Huge of stature, bold of heart, sound in morals, they are praised extravagantly by Tacitus⁴ as "the noblest race of the Germans"; they are self-contained, dignified, justice-loving, molesting no one, always maintaining honorable peace, but ready to rise in arms upon provocation, horse and foot in multitudes.⁵ Pliny, however, Pliny the

³ Zeuss, p. 139. Möller, *das altenglische Volksepos*, p. 86, thinks that Chauci settled in Kent and Northumbria, and so play a decided part in our ancestral history.

⁴ *Germ.* XXXV.

⁵ Vellejus confirms Tacitus; see Zeuss, p. 140.

eye-witness, seems to have received a very different impression. In his *Natural History*,¹ he tells us that he saw them in their desolate swamps where ocean claimed almost as much right as the earth itself, forcing the miserable inhabitants to seek such high places as can save them from the tide. "There a wretched race of men must seek refuge on the hillocks or in dwellings laboriously raised above the highest known tides. When the water covers their neighborhood (at high tide), they are like sailors; when it recedes, they are like shipwrecked folk. The fish going out with the tide are caught close by the huts. These people have no herds as their neighbors have, and do not live on milk; nor do they hunt wild beasts. For fish-nets they braid ropes of sedge and swamp-grass. For fuel they use peat. . . . They have no drink save rain-water caught in a trench about the houses." Then Pliny adds his rhetoric and his compliment. "Enamoured of their barbarism," he exclaims, "these men actually declare that if they were to be conquered to-day by the Roman people, they would call it slavery!" But evidently, as Zeuss points out, Pliny is here, quite as much as Tacitus, the seeker after rhetorical and artistic effect. One wishes to emphasize the virtues of the people; the other is bent upon a completely dreary picture of the land and the climate.

The Saxons, whom we must not too quickly confuse with the great nation which Charlemagne so forcibly converted to Christianity in the ninth century, are first named by the geographer Ptolemy.² He means the separate tribe which afterwards helped so

¹ XVI. 1.

² Zeuss, p. 150.

much to conquer and settle England. They were not only pirates; a land-expedition which they sent against the Roman province provoked the description of them as "a race who live in the trackless coastlands and swamps of ocean, and are terrible for bravery and agility." They were seated at the foot of the peninsula and by the mouth of the Elbe. Next to them were the Anglians; the traditions of this old home held long in England, and there seems no good reason to doubt the truth of Beda's statements.¹ The Anglians lived in what is now Schleswig.² The Jutes lived in modern Jutland and must have been close neighbors of the Danes.

We have laid more stress upon the Ingævonic tribes because they were beyond question the founders of our so-called Anglo-Saxon race. In the middle parts of Germany, however, were the Herminones, Suevi, Hermunduri, Chatti, and Cherusci: out of these tribes, not without mixings and shiftings, emerge the later Thuringians and Franks.³ Other minor divisions are given by Pliny and Tacitus. It should be mentioned that philologists have divided the Germanic race into two broad groups, — the East-Germanic and the West-Germanic. The former includes Scandinavian and Gothic; the latter, High German and Low German, — Low German naturally covering the Ingævonic tribes.

¹ References in Zeuss, p. 495 ff.

² Müllenhoff, *Beovulf*, p. 59.

³ Waitz (*Verfs.* I. 14) says the Franks were Istævones; Simrock says Ingævones; Zeuss (p. 80) as in our text.

CHAPTER II

LAND AND PEOPLE

The German in Germany — His former home — Inherited and actual culture — Country and climate — Pastures, flocks, and herds — Nomad or farmer? — Boundaries.

IN a district bounded by the Elbe and the Oder, north of the mountain ranges, and protected by the vast forest of Southern Germany, Germans had grown into a peculiar race, a *gens tantum sui similis*.¹ But it is improbable that they were original inhabitants of the land. Their forefathers must have broken, centuries before the time of Tacitus,² from that mysterious East which has sent out wave after wave of western conquest; and must have driven away, or possibly enslaved, the primitive tribes which held the land. No legends, no dim traditions even, seem to have survived from this remote epoch to tell the story of the conquest or keep memorial of an older home.³ Dahn, indeed, suggests that some vague recollection of conquest may lurk in those legends of a dwarfish folk which fled from men and sought refuge in the

¹ *Germ.* IV.; Müllenhoff, *D. A. V.* 1.

² Müllenhoff is inclined to place this date as early as the entry of Greeks and Italians upon their respective peninsulas.

³ "Ohne Zweifel hielten sie sich für Autqchthonen." Müllenhoff, Schmidt's *Allgem. Zeitschr. für Geschichte*, VIII. 216.

crevices of rock and field and moor, — in other words, an indigenous race, smaller and darker than the Germans.¹ Grimm is more poetical than clear when he speaks of rumors, still faintly pulsing (*nachzucken*) among all Germanic races, of primitive emigration out of Asia, rumors that connect themselves with the legends of Alexander, of Priam and Æneas, and furnish to mediæval tradition the origins of British tribes.² But this is extremely uncertain. The tribes which our forefathers drove before them may have been such as the Finns, a hunting folk low enough in the scale of civilization, who “had neither wool, salt, nor wagons with wheels, and could not count to one hundred.”³

Where the Germans parted from their Aryan kinsmen; where, moreover, all the Aryan race once dwelt, and whence the various families set out, — these are questions which bid fair to be long discussed and very late decided. The general assumption has pointed to Asiatic origin and a mainly westward course of Aryan conquest; but against such a view decided protest was made some time ago by Dr. Latham and Benfey, and lately by Canon Isaac Taylor and Professor Sayce.⁴ As rivals to the

¹ *Bausteine*, I. 285.

² *G. D. S.* 520.

³ Hehn, p. 18.

⁴ The isolated German attacks of Penka and others became a general advance at the meeting of the British Association in 1887. In addition to the philological arguments, Huxley has thrown the weight of biological research into the scale for a European origin of the Aryans. (See *Nineteenth Century* for November, 1890: “The Aryan Question and Prehistoric Man.”) His arguments arrive at much the same conclusion (see p. 766) as that reached by Dr. Latham. The best book on the subject is Dr. Otto Schrader’s *Sprachvergleichung und Urgeschichte*, now accessible in an English translation by F. B. Jevons, 1890. Dr. Schrader collects the material and gives a fair summary of the arguments advanced in opposition to the old belief.

old table-lands of Asia, may be mentioned the country north of the Black Sea, modern Germany itself, and Scandinavia. Indeed (limiting the question to our own race), in the older generation of Germanists there were men like P. A. Munch, the historian of Norway, and Wilhelm Wackernagel, who believed that our ancestors came out of Scandinavia down upon the continent and drove the Celts before them.

A candid critic is forced to admit that the whole question hangs in the air, belongs to a time quite beyond the reach of investigation, and probably will never be settled. If there is any drift of argument to decide the matter after we have looked at such results as Hehn has given us, it is in favor of Asia.¹

Easier to answer is the question of inherited culture, brought by the Germans from their earliest home. The absurd practice long prevailed of collecting all facts of culture which could be found in older Sanskrit literature, applying these first to the primitive Aryans, and then, by easy implication, forcing them bodily upon the early Germans. Victor Hehn has done something to check these unbridled imaginings, and he is sustained by such an eminent philological authority as Professor Johannes

¹ A vivid and plausible sketch of the Aryan invasion of Europe is given by Hehn in his monograph, *Das Salz*, p. 21 f. Referring to the argument for an Asiatic origin which is based on the character of domesticated animals and cultivated plants, Huxley, in the article quoted above, says (p. 768): "But even that argument does not necessarily take us beyond the limit of southeastern Europe; and it needs reconsideration in view of the changes of physical geography and of climate." For our own purposes in the following pages, which have nothing to do with origins of the Aryan race, Hehn's conclusions have abiding value.

Schmidt.¹ In the first place let us take the primitive Aryans, the parent stock of our race. What culture had they as common dower for all the members of the family, as one after another left the early home? Conservative inference from the facts of philology assures us that the primitive Aryan was on a higher plane of civilization than the North American Indian. The Aryan was no longer a mere hunter; he knew horses and cattle, though the latter were used mainly for the yoke. The dog was already domesticated; but, oddly enough, the cat, most domestic of animals, was not known to the household until modern times.² The Aryan plucked — not sheared — the wool of sheep and braided from it a sort of felt; for he did not as yet know how to weave. He knew the use of barley, but had little or no regular agriculture; for the use of wild grains can be assumed where there is no attempt to plant and cultivate. Flesh was eaten, though probably the Aryan had no salt.³ Milk was a favorite, and butter; while out of honey was made a fermented liquor, — mead. Houses, wagons, boats, and swords were common. The state was organized on the basis of the kin, and there were some beginnings of a legal system. The decimal system had been invented for counting, and time was reckoned by the moon, “the measurer”; hence the habit of

¹ In his lectures on Comparative Philology, as well as in his special works. See also Hehn, *Culturpflanzen*, p. 14 ff.

² Hehn, p. 374. Against an assertion that the Romans did not have the domesticated cat, see Thomas Wright, *Womankind in Western Europe*, p. 18.

³ Races still without use of salt are mentioned by Hehn, *Das Salz*, p. 16. Hehn thinks the Aryans first found salt in the neighborhood of the Caspian Sea.

our ancestors to count by nights (as in "fortnight") rather than by days.

Above this stage of culture we need not fancy the Germans of Tacitus very far advanced; nor, on the other hand, must we picture them below it. Philology insists that the words brought from a common Aryan vocabulary represent things and thoughts brought from a common Aryan life. Moreover, it is well worth noting that the conclusions of archæologists, especially those of the north, make Scandinavia emerge from the stone age about 1500 B.C.; place the bronze age, with considerable culture evinced by its relics, from that date until 500 B.C.; and from this point date the iron age. For the time of Tacitus, therefore, savagery cannot be assumed of the Germanic races, unless we believe that some great revolution or invasion, some social cataclysm which washed away one race and floated in another, made a breach with the past. It might be alleged to suit this theory that graves of the later bronze age do not contain so many or so fine objects as the earlier burial-places, and rarely have weapons in them.¹ But the burning of bodies, which came in about this time in place of the older and simpler burial, may account for the change; and, again, we have the hard facts of philology. Montelius says that Southern Scandinavia three thousand years ago had a civilization like that described in the Homeric poems.

In the time of Cæsar and Tacitus, Germany was covered with dense forests. Pomponius Mela, who,

¹ Montelius, *Civilization of Sweden in Heathen Times*, transl. Woods, p. 86. Some recent authorities put an age of copper between stone and bronze.

in the reign of Claudius, wrote a sort of geography, tells us that the land was crossed by many rivers, rough with many mountains, and for the most part impassable because of woods and swamps.¹ Swamp and forest, while they held back German culture, made mightily for German independence. Without these vast and dangerous reaches of woodland and morass, the military skill of Drusus would doubtless have conquered Germany as the genius of Cæsar conquered Gaul; for Gaul had been no wilderness, and in some branches of agriculture had given lessons to the farmers and gardeners of Rome. But Germany was one vast forest, broken by swamp or meadow, with here and there a stretch of open land: nothing about it was likely to attract an Italian. "Who," cries Tacitus, "would leave Asia or Africa or Italy to come to Germany, with its desert aspect, its harsh climate, its lack of cultivation, — a dreary world!" The German swamps are often mentioned, and abounded particularly in the north; what difficulties they made for the Roman soldier may be read in the nervous Latin of Tacitus.² Quicksands were plentiful enough. Jordanes, the historian of the Goths, tells, in his fourth chapter, a legend of the early wanderings of his race. They had come to Scythia,³ drawn by fruitful soil; and as they were crossing a bridge it broke, and numbers of them perished, not only in the stream but in the *tremulis paludibus* on both sides. With a touch evidently taken from old song about the tragedy, Jordanes adds that even in his time voices of cattle could be

¹ Pomp. Mela, *de situ Orbis*, III. 3.

² For example, *Ann.* I. 63.

³ Probably we are to think of Lithuania as the scene.

heard there, and forms of human beings could be seen. How swamp and fen and moor must have abounded in the low country northwards by the sea, the land of our Ingævonic forefathers! In their myths we find many allusions to these moors. The coast-line of northwestern Europe has changed since those days; where now is firm land was then a maze of islands, inlets, and marshes.¹ The epic of *Béowulf* deals largely with a demon of swamp and seaside; and even if, with Uhlund and Laistner, we regard this monster as a fog-demon, he rises from the waters. Ingævonic poetry seldom wanders far from the scent of brine and dash of waves.

The winters were keen and long. True, the "harsh climate" of Tacitus would be echoed by a modern Italian; but swamp and forest of that day made the winter far more severe than it is now: there was more ice and snow, more fog and rain. Like land, like people. The genius of Germanic poetry is tragic, and is fain to sing the fall of empire, such as the ruin of the Burgundian house, or the collapse of Theodoric's great kingdom. But back of the tragedy lies the melancholy temperament, and back of this the gloomy world in which our forefathers dwelt. Their song echoes to a homelier note of sorrow, — to hunger and cold, howl of wolf, grinding of ice, exile and misery of friendless men, bitter toil on a wintry ocean; such is the shadow to which a fierceness of delight in battle and slaughter makes the only contrast. So far as Germanic fancy pictured an underworld of sorrow and gloom, — not, of course, of pain

¹ Müllenhoff, *Nordalbingische Studien*, I. p. 117: "Die deutschen Völker an Nord- und Ostsee in ältester Zeit."

or of punishment,—it was a world of cold and cheerless waters: a “water-hell,” men have named it. In the Old English ballad of Thomas the Rymer, or Thomas of Ercildoune, we hear of these chill and gloomy waters. Thomas is led away to Elfin Land by the Elfin Lady:—

Scho ledde him in at Eldonehill
 Undirnethe a derne lee,
 Whare it was dirke als mydnyght myrke
 And ever *water till his knee.*

The montenans of dayes three
 He herd bot *swoghynge of the flode* ;
 At the laste, — *etc.*¹

Scandinavian poetry would yield us a plenty of similar examples.

These swamps, these vast and sullen forests, made the German of fitful and passionate temper, savage, inclined to gloom or to unchecked revelry. The *furor Teutonicus* was no fiction. Yet the German loved his forest; and trees are everywhere near to his heart.² The grove was his temple, with dark and horrid rites that suited the scene; the dead were often buried under trees, as in old Hebrew days when Rebecca's nurse, Deborah, is said to have been buried under an oak, afterwards called “the oak of weeping”;³ and the boundaries of estate or mark were designated by some tree, as oak, ash, beech, thorn, elder, lime, and birch.⁴ These sacred trees long continued to be a source of anxiety to the

authorities of the church, and one was cut down by the apostle of Germany, St. Boniface. Under a tree was held the old Folk-Moot, the primitive court and local assembly;¹ and the Westphalian descendant of these older courts, the famous *Vehmgericht*, not only held its sessions under such a sacred shadow, but hanged the victims of its process "on the nearest convenient tree," after the manner of early Germanic executions.² The peasant still loves to plant trees about his home, and in olden days the tree itself was centre and prop of the house; even in our prosaic America,³ one can often tell from far away where the different farm-houses stand, simply by the groups of tall pine trees that cluster about each home. Of the German forests, however, we find here and there such a picturesque periphrase as "where the squirrel leaps for miles from tree to tree."⁴ The oak tree was the dearest; and it has held its royalty. It gave acorns to the swine; and where game was scarce and other food exhausted, the same humble fruit kept life in man himself. Later times inquire carefully about the ownership of acorns which drop into a neighbor's ground.⁵ Next to the oak stood the beech, and these two are "noble" trees;⁶ although the ash often took high rank in Anglo-Saxon days. The ballads preserve traditions of their sanctity.

Glasgerryon swore a full great othe,
 By oake and ashe and thorne :
 "Lady I was never in your chamber
 Sith the time that I was borne."¹

Punishments for injuring trees were inconceivably harsh; and beheading is among the milder penalties.² Fallen into disuse in historic times,—we find no examples recorded of the worse punishments,—these old laws were, nevertheless, once part and parcel of the system and were doubtless rigidly enforced.

Inhabitants of such a land must have been more nomadic than agricultural; but, although marsh and forest predominated, Germany was not without fertile fields and a rude system of farming. We read in Tacitus of good farming land offered as an inducement for German tribes to make peace with Rome. The proportion of cultivated fields to pasture and woodland might perhaps serve as a test of civilization; and Arnold calls the German now a "nomad-farmer," now a "farmer-nomad." Again, the bronze sickles and the hand-mills found in graves show that tillage was known in Sweden previous to the fifth century before Christ.³ Cæsar, to be sure, discovered very little which testified of agriculture among the Germans; but Tacitus mentions it in more favorable terms. The increase of population acts on a nomadic race as a stimulus to further wanderings; but when Roman barriers threw the Germans back upon themselves, there was natural demand for some steadier supply of food, and they learned to till the soil. The Angles, Saxons, and Jutes, once settled in the fertile

³ Montelius, work quoted, p. 71. See also Waitz, *Verfassungsges.* I. 16.

fields of Britain, became as outright farmers as were ever seen. Nevertheless, nomadic instincts were very strong with the German, and, on the Continent at least, he put his chief trust in flocks and herds. The German pastures were famous. Among the Ingævonian tribes especially, swine must have been raised in great numbers, and, though of an inferior breed, doubtless were a prime source of food.¹ The horse was raised or hunted, not for modern reasons, nor yet for the milk of the mares,² but for its flesh. Like the oak, horses had a sacred association, and were among the noblest offerings that could be rendered to the gods. White horses were used for divination,³ and the color still remains a mark of royal ownership. Modern anthropology is inclined to associate the prominence of the horse for sacrifice with its prominence as an article of food.⁴ Certainly the eating of horse flesh at feasts and celebrations was a practice which the church in Germany opposed as strenuously as possible, and drove out only after a long and hard struggle. About the year 732, Gregory, wisest and best of popes, wrote as follows to Boniface in Germany: "Thou hast allowed a few to eat the flesh of wild horses, and many to eat the flesh of tame ones. From now on, holy brother, permit this on no account." Perhaps, hints Hehn,⁵ the apostle of the Germans

¹ Tacitus does not mention them. See Hehn, p. 16; Waitz, I. 36.

² "Das melken der Stuten ist bei reinen Germanen nie Brauch gewesen." Hehn, p. 45.

³ Tac. *Germ.* X.: "candidi et nullo mortali opere contacti."

⁵ *Culturpfl.* p. 22. The church also forbade the eating of storks, beavers, and hares. Cæsar says, in Britain *leporem et gallinam et anserem gustare non fas putant*—sign of sacred associations. Hehn, p. 272.

had been thus liberal because the custom was known to him in his native England, while it seemed but abomination to the Italian. The horse was cared for in droves and was watched by herdsmen. In the Old Saxon *Héliand*, a paraphrase of the gospels made early in the ninth century, the "shepherds" of the original become in Germanic rendering *ehuskalkôs*, horse-servants, who were not watching their flocks by night, but rather were guarding their horses.¹ Down to the year 1000, horse flesh was eaten in Germany; and in Poland horses were objects of the chase as late as the seventeenth century. It must be noted, however, that certain rock-pictures of the Scandinavian bronze age show the horse in regular cavalry combats; and it was doubtless used for riding, not hauling, in the earliest Germanic times.

Cattle came later than horses, and at first were used mainly for the yoke. As with the horses, which were neither fleet nor handsome, and with sheep, Tacitus notes in German cattle an inferior breed; and he points out the lack of that *gloria frontis*, the stately horns of an Italian herd. A German commentator on Tacitus murmurs in a note that the short-horns probably gave much better milk! In the year 225 of our era enormous herds of cattle are reported as covering Germany. It is a characteristic trait of nomadic times that cattle might be honorably stolen from a neighboring tribe, provided it was done openly, — just as wood might be cut and hauled away if the act was accompanied by noise and shouting. The mortality of cattle in those days must

¹ Pointed out by Vilmar in his excellent little work, *Deutsche Altertümer im Héliand*.

have been enormous: with all modern resources, a severe winter kills thousands upon our western plains, and it was infinitely worse with the Germans.

As in the case of oak tree and of horse, cattle, which entered so closely into the life of the Germans, were connected with sacrifice and rites of worship. Kemble¹ sees signs of a cult of this sort in the fact that bones of oxen and cows, as well as of horses, have been found in divers Germanic graves. He also notices the cows which drew the wagon of Nerthus, chief goddess of the Ingævonic race, and the oxen yoked to the chariot of the Merovingian kings. Cattle were of course supremely important to the nomadic Aryan. One thinks of the great part played by the cow in Sanskrit literature, of the heavenly cattle, more or less frequent in all Aryan mythology, and of the customs which we can easily revive for our imagination from such fossils as the Latin "pecunia" or the English "fee." The clouds, those fascinating objects for early myth-makers and modern myth-mongers, are represented as horses, ships, swans, — but most of all as cows, which are milked by Indra or our own Thunar.² There was a "holy cow, first-born of all things," in Hindu myths; and the cow remained, for the whole race, chief synonym of good. In Scandinavian cosmogony, a cow appears on the scene at the earliest possible moment; and we even hear of a certain Swedish king who was wont to take a cow with him into battle. Good reason for all this. Alive, cattle gave milk and drew loads; dead, they were useful in many ways, — flesh for food, skin for

¹ *Horæ Ferales*, p. 68.

² So interprets Mannhardt, *Germanische Mythen*, p. 1 ff. and p. 37, n.

clothing, sinews for bowstrings, horns for cups, bone for needles and tools.¹ Even to-day, proverbial wisdom insists that there is "nothing like leather," and leather is palpably a weaker avatar of the holy cow herself.

Fowls and bees are not unknown to nomadic life; and they were common with our forefathers. Of fowls we meet geese, ducks, and chickens. Pliny tells of the famous German goose-feathers, highly valued for bed-coverings in Rome, and fetching enormous prices; though we are reminded that such use of feathers for stuffing cushions and pillows was not originally Roman, but borrowed from Gaul and Germany.² Geese were even kept as pets, and we have a case recorded where they sympathize audibly with the grief of their mistress:—

Lamented Gudrun, Giuki's daughter,
so that tears flowed . . .
clamor'd answer geese in courtyard,
beautiful fowls the fair one owned.³

As for the bee, its industry did something more than point a moral for our ancestors and provide an occasional luxury. It furnished them with fermented liquor; while honey itself was prized far beyond any standard of modern times. This is true of nearly all nomadic races, and at first concerns only the wild honey; later there sprang up a regular bee-culture. In Slavonic lands, we can trace for a long while the custom of paying taxes and tribute in honey; in Iceland, wax was used for the same purpose.⁴ The old

¹ Hehn, p. 14.

² Hehn, p. 302.

³ *Edda*, ed. Hildebrand, *Guðrúnarkviða*, I. 16.

⁴ Weinhold, *Altnordisches Leben*, p. 89.

laws were very strict and minute in their treatment of property in bees, particularly the right to mark and keep a tree in which the insects have taken quarters, — evidently nomadic jurisprudence:¹ a fine was imposed on him who took the bees from such a marked tree, “de arbore signato in silva alterius apes tulerit.” If the tree had no mark, no fine could be levied.² In the Anglo-Saxon “Rectitudines Singulorum Personarum,” we find the functions of the beechurl, *béo-ceorl*, clearly defined; among others, he is to pay so much tax in honey.³ He is evidently an important personage, and much in demand. In that priceless account of the voyages of Ohthere and Wulfstan which English King Alfred added to his translation of the History of the World, by Orosius, we have Wulfstan’s description of the Esthonians (*i.e.* the Old Prussians) as follows: “And there is very much honey and fishing; and the king and the richest men drink mares’ milk (the fermented liquor); poor folk and slaves drink mead. . . . And there is no ale brewed among the Esthonians, but there is mead a plenty.” Alfred’s own people used honey in all cases where later times employ sugar.⁴ The older Anglo-Saxons drank mead galore; their chief building was the “mead-hall.” Indeed, as late as the reign of William the Conqueror, a very large proportion of the products of the country, as shown by Domesday

¹ Grimm, *R. A.* 596 ff. Agricultural races, of course, raise barley and hops, and soon turn to beer-brewing.

² Homeyer, *Haus und Hofmarken*, p. 10.

³ Schmid, *Gesetze der Angelsachsen*, p. 376. Moreover, we have the “bee-thief.” In Alfred’s laws (Schmid, p. 76) three special thieves are named, — of gold, of horses, and of bees.

⁴ Cockayne, *Leechdoms, Wortcunning, and Starcraft*, II. p. ix.

Book, consisted in honey, used chiefly for the making of mead.¹ There is a question in the *Demaundes Joyous*, printed after the French by Wynkyn de Worde in 1511, and quoted by Kemble in his *Salamon and Saturnus*:² “Whiche is the moost profytable beest and that man eteth leest of? — This is bees.” Finally, bees passed into religion and superstition. He that kills a bee is the devil’s own. Bees speak to one another, and understand what is said to them.³ We “tell the bees” of a house-owner’s death; and in old times people added a humble request that the bees would kindly remain with their new master. In Westphalia, they sing on such an occasion: —

Ime, dîn här es dot,
verlått mi nit in mîner not!

Bee, thy lord is dead:
forsake me not in my need!

When the bride was led to her new house, a similar rite was performed: —

Imen in, imen ut,
hir es de junge brut;
imen üm, imen an,
hir es de junge mann:
imekes, verlått se nit
wenn se nu mal kinner kritt!

That is, “Here is the bride and here is the groom; good bees, don’t leave them when the children come.” One of our old bits of English poetry is a charm to prevent bees from deserting their home.⁴ They are

⁴ Grein, *Bibl. d. ags. Poesie*,² I. 319 f.

called *sigewîf*, a name of the Valkyrias, "victory-women," and are evidently not far from active myth. Like the cow, honey is a precious thing among the Germanic (or at least, the Scandinavian) gods. It is the main ingredient of their drink; it is connected with the origin of poetry, their gift to men; and Grimm reminds us that, in like manner, Grecian fable made bees carry to Pindar — or any other convenient poet — the divine gift of song.¹

All these things point very strongly to a nomadic existence; but there was, nevertheless, a certain amount of farming practised even by the Germans known to Cæsar and Tacitus. We need not in our haste hand them over to barbarism or savagery.² Guizot, in his *Histoire de la Civilisation de la France*, assumes that our forefathers were savages outright, and he prints along with the *Germania* parallel passages describing American Indians and other equally barbarous races.³ Aside from positive evidence to the contrary, we may reasonably object to this view, as confounding what the Germans call *Uncultur* and *Vorcultur*. The former is the state of tribes which never come to anything better than a raw clanship and remain mere hordes; the latter is the note of those races which are passing through the clan-stage to higher forms of national life.⁴ The Germans of Tacitus are a developing, ardent, ambitious race, destined soon to become a dominant race. They undoubtedly had more or less agriculture; and this

¹ *Deutsche Mythologie*⁴ (henceforth, *D. M.*), p. 579.

² A. Lang, *Myth, Ritual, and Religion*, I. 222, calls the society of the Germans of Tacitus "a higher barbarism," like that of the Scythians of Herodotus.

³ See Waitz, I. 32.

⁴ Dahn, *Bausteine*, II. 77.

is perhaps the best standard of civilization, seeing that it marks definite advances from the merely nomadic state. Agriculture among the earliest Germans has left ample proof at least of the beginnings of its existence. In the first place, we have Cæsar's account, derived from his contact with a warlike and aggressive tribe. He says the Germans do not care much for farming, since they depend for food mainly upon milk, cheese, and flesh of animals.¹ They have no individual farms, — but he goes on to tell how they cultivate their fields. Moreover, he tells us that Germanic tribes, Usipites and Tencteri, crossed the Rhine with a great mass of men, in the year 55 B.C., driven out of their homes by the Suevi, *who hindered them in their farming (agricultura prohibebantur)*. Again, Cæsar tells of Germans who went into Belgium on account of the fertile land there, and this "in ancient times." He himself burns the villages and destroys the crops of the Sigambri.² What the warriors whom Cæsar met would think and say of such a peaceful pursuit as farming, appeared to the Italian almost a denial of the fact. Farming was entirely a matter for slaves and women, not in any way the freeman's business. By the time of Tacitus, — and he had doubtless better information than Cæsar could elicit in the hurry of a campaign, — farming is a more important subject.³ The description given in the twenty-sixth chapter of the *Germania* is unfortunately so brief and obscure as

¹ *Bell. Gall.* VI. 22. See also IV. 1.

² *B. G.* IV. 19.

³ Grimm, *G. D. S.*³ 16, believes that the Germans were mainly nomads (not, of course, savages) when they first appeared in history, but admits the beginnings of agriculture.

to remain one of the favorite skirmish-grounds of a work that furnishes opportunity for battle in almost every page. But whatever the real method of Germanic agriculture as the Roman here describes it, there is no doubt at all about the fact; there was a respectable amount of farming carried on in Germany when Tacitus wrote his book. Land, however, was plentiful, and pastures were probably much in excess of cultivated fields.

Moreover, we have older evidence, not so direct, indeed, but of a very convincing character. The best writers on Scandinavian antiquities find it probable that in the later stone age agriculture was known and practised; while for the bronze age the same assertion is made with absolute certainty. Rock-pictures of that time show scenes from the farmer's life with plough and oxen; and grain has been found in the graves.¹ Not so sure a witness is the allegory of Germanic myth; and yet, if Müllenhoff's brilliant interpretation be correct, the prelude of our own great epic, *Béowulf*, tells in mythical language the story of agricultural beginnings among our far-off ancestors by the North and Baltic seas.² The Anglo-Saxon kings boasted descent from Woden, the chief divinity of the Germanic race in the time of Tacitus; but the genealogies go even farther back than Woden. The remotest ancestor that appears in any of them is Scéaf;³ for Anglo-Saxons he seems to have been the type of the oldest times, the most

¹ Kålund in *Grundriss d. germ. Philol.* II. 2, 209 f.

² First developed in *Haupt's Zeitschrift*, VII. 410 ff.; then in the book *Beowulf*, printed after Müllenhoff's death.

³ Grimm, *D. M.* III. 386. See also Müllenhoff, *Beowulf*, p. 6.

ancient of all kings and heroes. The Saxon Chronicle, with the customary confusion of two religious systems, asserts that Scéaf was born in Noah's ark. An exquisite myth is told about him, standing in evident relation to those later romances and legends about the swan-knight which are most familiar to us in the story of Lohengrin.¹ In some Scandinavian country, or possibly in the old seat of the Angles on the Cimbrian peninsula,² a ship without oars or rudder drifted one day to land, its only freight a new-born boy lying asleep upon a *sheaf* of grain and surrounded with treasure and weapons. It was a kingless land, and the folk hailed this omen joyfully, named the boy Scéaf (sheaf), and brought him up to be their king. We shall see more of this legend when we come to speak of Germanic ship-burial;³ for the present we are concerned with Müllenhoff's interpretation. "If we look closer at the legend," he tells us, "ship and sheaf must evidently mean navigation and agriculture, weapons and treasure are as much as war and kingship; and thus all four gifts point to the chief elements and foundations of civilization among the ancient Germans by the sea." Müllenhoff goes on with his *deus ille fuit*; but whatever the truth may be about Freyr and the rest, it certainly seems safe to believe that our heathen forefathers held traditions of a dim past in which the first shadowy figure is the "culture-hero," the benefactor of his race, who shows them how to till the

¹ *D. M.* III. 391.

² Müllenhoff, *Beowulf*, p. 6.

³ The prelude of *Beowulf* is translated below, p. 324. Scéaf is here confused with his son Scyld, the warlike king, "Scyld Scéfing." The story certainly relates to the old Ingævonic legends, perhaps to Ing himself.

soil. Moreover, the myth comes from a neighborhood where heathendom held stubbornly for long centuries after Southern Germany had been converted. From all this various evidence it seems clear that the early Germans were, to a certain extent, farmers; they sowed and tilled and reaped; but how much they gathered into barns is a more difficult question.

We should like to know how far the idea of individual ownership of land had become fixed, and how far a legal and executive system had taken the place of mere paternal or patriarchal jurisdiction; for farming means property, and property means law. J. Grimm¹ points out that a nomadic race is naturally most interested in public or common lands, but farmers in private and divided estates. As we go back to the beginnings of our institutions and laws, folk-land, as the Anglo-Saxon terms run, grows more important than book-land,—the mark or common than the farm. Uncultivated land is highly important to the nomad; he looks to it for his hunting, his grazing, and his bee-tracking. For this reason, we hear so much about the mark. Moreover, land was very plentiful; there was enough for everybody, as Tacitus expressly tells us. It is likely that farming tracts were occupied by small clans or families, and land was assigned by lot to the individuals. We thus have farmsteads (*Einzelhöfe*), scattered about the country as this or that locality invited settlement.² With advancing need of land for agriculture came the increased power of single leaders and princes,

¹ R. A. 495.

² *Germ.* XVI.: "colunt discreti ac diversi, ut fons, ut campus, ut nemus placuit."

who doubtless took up by conquest, or otherwise, large tracts of country and let them out to tenants under conditions which varied according to the time and the locality; the conditions grow more complicated, step by step, until we come to mediæval Europe and the full-blown feudal system. The individual ownership of land seems to have found earliest and sharpest development among the Anglo-Saxons; but on the continent it was not unknown. To own land came to be the test of one's gentle condition; and some writers are fain to carry back this instinct to the most primitive times. ✕ Waitz, for example, thinks that the individual ownership of land measured the amount of *wergild*, and formed the very foundation of personal freedom. ✕ On the other hand, Von Sybel denies that primitive Germans had any interest whatever in separate ownership of land. Arnold, in a more temperate spirit,² simply decreases the amount of private holdings and increases the area of common land, the further we penetrate into the Germanic past. Permanent, settled ownership came into full force, he thinks, about the fifth century.³

This vexed question is one that we may well leave to the historian of our institutions. Philology and literature, however, are not altogether silent on the subject. The names of our popular fruits and vegetables show conclusively their origin in Italy;⁴ and the same holds true of the refinements of gardening and the processes of the vineyard. But if the rude

¹ Work quoted, I. 126, 133.

² *Deutsche Urzeit*, p. 231.

³ There is much literature on this subject. See, among other books, Seebohm, *Primitive Village Community*, and D. W. Ross, *The Early History of Land-Holding among the Germans*. Ross gives a host of references.

⁴ Hehn, p. 405.

German had no such arts or resources as these, he nevertheless very early learned the luxury of owning land. The warrior who served his king was rewarded not only by the arm-rings of gold or silver or bronze, but by land. The young clansman of *Béowulf*, *Wiglaf* by name, who has left his prince to struggle alone against a dragon, is overwhelmed with shame when he thinks of the benefits the old king has heaped upon him. —

He minded the holding his master had given him,
stately homestead of sons of *Wægmond*,
all the folk-right his father had owned, — ¹

where Professor Scherer interprets folk-right to mean "share in the folk-land."² This is, of course, open to question; but in our two oldest Anglo-Saxon poems, both of them based on quite heathen traditions, we have reference to the gift of land to a person in reward for actual service. *Widsith*, "the ideal minstrel," says that he was with a king of the Goths and had from this monarch a precious ring: —

and this to *Eadgils* then I gave,
my helmet-lord, — when home I fared, —
to the lov'd one in pay for the land he gave me,
my father's heritage. . . .³

The minstrels, however, seem to have held their estates by an uncertain tenure. That altogether charming little poem which worthily heads the list of English lyrics, "*The Consolations of Déor*," tells

¹ *Béow.* 2606 ff.

² In the *Zeitschrift für oesterreichische Gymnasien*, 1869, p. 89 ff. Professor Kluge also makes *are* in v. 2606 as much as "Besitz" (see Paul-Braune, *Beiträge*, IX. 192), and so I have translated "holding," — awkwardly enough.

³ *Widsið*, 92 ff.

in the first person how a singer comforts himself for the loss of his position as court-minstrel. After enumerating some cases of particularly bad fortune taken from German heroic legend, Wayland the Smith coming first of all, Déor tells in the last stanza all about his own plight: —

Now I will say of myself, and how
 I was singer once to sons of Heoden,
 dear to my master, and Déor was my name.
 Long were the winters my lord was gracious
 and happy my lot, — till Heorrenda now
 by grace of singing has gained the land
 which "the haven of heroes" erewhile gave me.
 That past over, — and this may too!

Lastly, we may appeal to immemorial custom and the poetry of our old laws. Primitive is the fashion prescribed in oldest Germanic laws for one who should take possession of a piece of land. It was done by certain symbolic acts; one must break a branch from some tree on the property, or set one's chair in the midst of the field, or drive a wagon across it, or kindle a fire upon it.¹

In regard to the whole question of nomad or farmer, it seems most probable that the German of Tacitus was a nomad with the beginnings of agriculture, but also with a passion for warfare that threw all his other tendencies into the shade. He was a warrior: his nomadic traditions and his agricultural instincts found no expression in his own acts, but were left to slaves, captives, and women, the old and the infirm.² His farm was mainly in pastures

¹ Grimm, *R. A.* 109.

² *Germ.* XV.: "delegata domus et penatium et agrorum cura feminis senibusque et infirmissimo cuique ex familia."

with a few cultivated fields, in which he raised barley, perhaps oats, and rye, — the latter in the north, — and, of course, flax for his linen.

It makes against the theory of mere nomadic life among the Germans that they were so careful about their boundaries. The main boundary of a land, called the "Mark" in German, and in English "March," mostly neutral and uninhabited, was generally a forest; at any rate, the word meant both boundary and woods. Marcomanni can be "men of the wood," or "men of the border."¹ Or the boundary might be a moor, a stretch of swamp, as would naturally happen in North Germany and in parts of England. The lore of metes and bounds is evidently of great antiquity in Germanic law, and particularly with regard to the smaller estates. Boundaries are fixed by many a curious fashion; as far as the salmon swims up the stream, where a certain shadow falls, as a bird flies, or an egg rolls, or a hammer is thrown.² Later, but still in primitive times, rude marks, often of a sacred character, were cut into a tree.³ As in classical lands, these border marks and signs acquired a sacred character, and came into touch with myths. Perforated stones, which the ancients seem to have held sacred,⁴ served as sign of the boundary; and so did the huge mound which marked a grave. Nay, the gods themselves were thought to have laid out the boundaries of land and land; for not only have we the general

¹ J. Grimm, *Grenzaltherthümer*, Kleinere Schriften, II. 33.

⁴ Grimm, *D. M.*⁴ 976. A feeble child, people thought, would gain strength if he were made to sit in one of these holes.

testimony of such a word for "god" as Anglo-Saxon *metod*, measurer, but we find everywhere bold, irregular lines of rock, or huge, isolated stones, standing in some connection with the devil, — behind whom, remarks Grimm, there lurks an ancient god. Such a devil's wall the modern tourist of the Harz Mountains may still see in the neighborhood of Blankenburg. The Scandinavian Thor had to do with boundaries. Often the border-line was marked by a place of worship and sacrifice; and since any legal punishment in those days could be regarded as the offering to an offended deity, it is quite evident why a criminal should be punished "on the border." Kemble¹ refers to the well-known case in our Anglo-Saxon poem, *Juliana*. This saint and martyr is led "to the borders of the land, to that place where the stern ones determined in their hatred to behead her."² Other sacred traditions of the boundary-places are collected by Grimm in his essay on *Grenzaltherthümer*. Duels, ordeals, trials by combat, took place at the border, or on an island, — whence was derived the Old-Norse name for such a duel, *holmgang*. Equally romantic and far more peaceful customs, such as wedding or betrothal, may also have been observed upon the boundary; certainly it was custom for a prince to receive his bride on the frontier of the realm, as witness *Gudrun*: —

In fair and noble fashion they met the lovely maid
At the border of two kingdoms. . . .³

Nothing, however, testifies so clearly to the anxiety with which the German regarded the preservation of

¹ *Saxons*, I. 49, note.

² *Jul.* 635.

³ *Kudrun*, ed. Bartsch, 13.

boundaries, as his excessive punishment for violating them. The severity of these penalties reminds us of the laws about wilful injury done to a tree; and where the power of earthly law was brought to an end by the death of the offender, superstition took up the tale and told of many a wretch whose ghost haunted in this or that painful fashion the place where he had done his evil deed. It is perhaps not altogether accidental that in a bit of Danish popular tradition the punishment for this offence is the old Germanic horror of cold and freezing. Strande's wife had helped her husband move a boundary-stone; and now she is dead and haunts the place each night, and is heard crying pitifully to her husband—his punishment may be even worse—"O Strande, I'm freezing!"¹ Reaching down into modern times is the custom prescribed for a new purchaser of land, for an heir, or even for the king who has just obtained his throne. From all of these, custom demanded a formal inspection of bounds and borders; as is so often the case, even comedy and farce seize at last upon a grave tradition, and we hear of villagers whipping their children at the border of the hamlet in order that this important boundary may be indelibly impressed upon the memory of future townsmen. In fine, we conclude from all this mass of boundary-lore that the desire to have and hold a settled territory is Germanic instinct, is original, and needed no importing.

MEN AND WOMEN

Stature and features — A fair-haired race — Sense of personal beauty — Food and drink — Habits of daily life — Clothing — Adornments.

WE have long enough discussed the Germanic type; let us look at the individual German, his personal appearance, his home, the habits of his private and public life. About his bigness but one tale is told, from Cæsar, Quintilian, and Tacitus, down to the writers of the dying empire; all agree that he was huge of stature. To the small but wiry Roman this unspoiled son of the woods seemed a veritable giant. Even as late as Senlac, the Saxon is larger and taller than the Norman, whose Germanic blood had been crossed with a Gallic strain;¹ and for the earlier period, skeletons seven feet in length bear similar witness. The race seems to have been pure, so that these bodily traits were shared by all its members;² while the rigors of life and climate worked together for a very strict survival of the fittest. Puny or undersized children, pronounced weaklings, were

¹ Freeman, *Norman Conquest*,² III. 480, note.

² *Germ.* IV. See also Huxley's article, already quoted, in *Nineteenth Century*, November, 1890, p. 756 ff. The skull is of the "long" variety.

either treated as we treat superfluous kittens, or else were thrust aside into the byways of household and menial labor.

The giant was no lolling, good-natured fellow; his huge frame was easily shaken by passion, and in the hour of rage or battle, his blue eyes flashed an uncanny fire.¹ Even the Gauls, says Cæsar, were dismayed by the wild glances of their neighbors across the Rhine. Hehn is inclined to think that this ferocity is inherent in the glance of all nomads; but it was a characteristic of the Scandinavian down to recent times, and was known among them as the snake in the eye,—*ormr i auga*. Svanhild was daughter of Gudrun and Sigurd, and had all the pride and fire such blood should bring. On a false charge of dishonor, she is condemned to be put under the feet of wild horses, that they may trample her to death; and it is done. "But when she looked up at them, the horses durst not tread upon her, and Bike [Bicci, Sibich, the treacherous counsellor of the king] had a sack drawn over her eyes . . . and so she ended her life."² It was easy for this fearful glance to attract a superstitious terror, and pass into the domain of spells and enchantments. We read that when a sorcerer was executed in Norway, it was customary to throw a sack over his head, for his dying glances might well be big with harm.³

¹ *Truces et cærulei oculi*.—*Germ.* IX. Plutarch (in *Marius*, XI.) speaks of the Cimbrian eyes as "sky-blue." The blue eye and fair or ruddy hair were admired by the Hellenic race, and may have been their original type. Certainly their epithets for gods and goddesses bear out this view.

² P. E. Müller, *Sagabibliothek*, II. 83.

³ Maurer, *Bekehrung d. norweg. Stammes z. Christenthume*, II. 119.

Huge of frame, blue of eye, — often one may fancy it a keen, hard gray, — the German rounded out the list of his blond attractions with golden or ruddy hair. We are not to forget that he was a cavalier, at least in his flowing locks; to be a roundhead was to be a slave. This long hair was the German's conspicuous feature, for he used various means to heighten its color, and we read of a Roman army in Gaul surprising certain Germans who had been making a raid in the provinces and were engaged in the amiable occupation of hair-dyeing. The Roman leader, says our chronicle,¹ found them by a river, "some bathing, some, after their custom, coloring the hair red, and many engaged in riotous drinking." When Caligula was fain to make his Roman subjects believe that there were Germans among the captives whom he led in triumph, he made certain Gauls dye their hair red. Another emperor, Caracalla, went so far as to wear a blond "German" wig; and it became fashionable for ladies in Rome to dye their hair with a peculiar German soap imported for the purpose, — that from Batavia was the favorite, said to have been made of ashes mixed with goat's fat, — with which they obtained either a golden or a ruddy tint. Still better was actual German hair, — blonde wigs, — which they often affected.²

We have said that the German cherished his flowing hair; it was his outward and visible sign of freedom, a precious thing. The gift of a lock of one's hair was a symbol of submission. Among the

¹ Ammianus Marcell. 27, II. 2. It was in the year 367.

² For the popularity of yellow hair in Rome, see Wright, *Woman-kind in Western Europe*, p. 11.

Frisians, men who took oath to anything touched hair or beard;¹ and a story quoted by Grimm tells how those who were about to be beheaded took measures to save from stain of blood their long golden hair. Possibly some faint echo of this tradition lingered with Sir Thomas More when on the scaffold he "moved his beard carefully from the block." Particularly the kings, the *reges criniti* of the Franks, were marked by flowing hair; and if this were lost, with it went the fact and chance of kingship. Paul the Deacon, in his history of the Lombards, tells a pretty tale about one of their princes. A hostile tribe had resolved to put to death all the adult Lombards, and three of the princes escape on fleet horses. A younger brother, Grimuald, they deem incapable of keeping himself so long in the saddle, and are about to kill him that he may not pass into slavery; but as the spear is lifted against him, the boy begins to weep, and crying, "Do not kill me! I can hold myself on horseback!" is spared, and rides away with his brethren. Nevertheless, he is overtaken by a foe-man and is again in danger of death; but his enemy, impressed by the noble figure, the glittering eyes, and above all by the long blond waving hair, spares him, and leads him, still mounted, to the camp. But royal blood is in the boy's veins. He chafes at his disgrace; draws a short sword, "such as lads carry," splits his captor's head to the skull, rides off, and triumphantly rejoins his brethren.² The long locks were sign of

¹ Grimm, *R. A.* 147, 285.

² Paul Diac., *Langob.* IV. 37. Paul in IV. 22 describes the old fashion among his race as requiring neck and back of head to be shorn, and allowing the hair, parted in the middle, to fall over the cheeks down to the mouth.

freedom in woman as in man. *Frî-wîf loc-bore* — “free woman with curly or flowing hair” — is the phrase applied in an old Anglo-Saxon law.¹

It needs not to add that Germanic complexions were blonde, to suit the hair and eyes. The type is seldom found in modern descendants, and was broken in England by intermarriage with the native population; for while “the pure Anglo-Saxons were a round-skulled, fair-haired, blonde-complexioned race,” the Celts had “mixed largely in Britain with one or more long-skulled, dark-haired, black-eyed, and brown-complexioned races,”² and our present Englishman shows the crossing. In some parts of Scandinavia and in Saxony one can still find the “white girls and black bread.” Recent German school-statistics³ of one of these favored localities gave, out of 468,763 children, 317,444 who were “blonde,” and 136,014 who were “brown.” Andree, however, asserts⁴ that to-day the majority of that great “white” race, the Aryans, whose career of conquest helped Spencer to draw the conclusion that white races are “habitually the dominant races” in the struggle for existence, have a dark complexion; among these white families, “does not the dark-haired type,” asks Victor Hehn, “always conquer the blond?” How different is the story with our Germanic ancestors, or even among those early races whose modern representatives are uniformly

dark! For in Greece the gods, Eros, for example, were represented with golden hair, just as in our mediæval miracle plays and mysteries the sacred personages were always given golden hair and beards, and the angels wore "gold skins and wings." In the purely Germanic races gold and white are the aristocratic colors, and a Scandinavian legend¹ tells how god Heimdall, "whitest of the Æsir," wandering the green ways of earth under the name of Rîgr, begets in succession Thrall and Karl (Churl) and Jarl (Earl). Thrall's complexion was black, and he was straightway a hewer of wood and a drawer of water, worked afield, fed swine, dug peat. Karl the freeman tamed oxen, raised crops, made ploughs, built houses and barns and wagons. One of his sons is named Smith, or the artisan; and he and all his breed are of a ruddy hue, and are like their favorite god, plain old Thor. Highest of all was Jarl; when he was born he was "swaddled in silk," "his hair was yellow,² his cheeks were rosy, his eyes were keen as a young serpent's"; and as his complexion, so also his callings were of another color than Karl's or Thrall's. He learned to brandish the shield, to wind the bowstring, to span the elm-bow, to fit the arrow, to hurl lance and spear, to egg on the hound and tame the stallion, to swing the sword, and swim through the sea. To match this aristo-

¹ *Rígmâl: Edda*, ed. Hildebrand, 112 ff. Simrock's *Edda*, p. 111 ff. Vigfusson and Powell, *Corpus Poeticum Boreale* (hereafter *C. P. B.*), 1, 234 ff.

² Meyer, *Altgerm. Poesie*, p. 209, without special references, says that the typical Germanic hero's hair is not "blonde" but "bräunlich." The "jugendkräftige Mann" whom we have met in description of Germanic heroes, is certainly "blonde."

cratic type of earth, we find Balder, darling of the gods, "so fair to look upon that light streams from him, and the whitest of all flowers [or grasses] is likened to his eyelashes."¹ So the tradition passes down into the ballads; and what reader of these abstracts and brief chronicles of old time does not remember how all the knights and all the ladies have fair skin and yellow hair? Even Robin Hood has "a milk-white side." Churlish dispositions crop out in the dusky color of face or eyes or locks; in some versions of *The Twa Sisters*, "the younger sister is fair, and the older dark" to suit their characters:²—

Ye was fair, and I was din (dun).

Dark complexion is a badge of low birth, and then comes to be the note of undesirableness in English feminine beauty. Again and again Shakspeare returns to this theme in his sonnets about the "dark lady,"³ that "woman colour'd ill," with "mourning eyes":—

In the old age black was not counted fair,
Or if it were, it bore not beauty's name. . . .

In a Scandinavian saga, twins of a dark complexion are born to a certain queen, but her husband calls them "hell-skins" and refuses to own them.⁴ It is prejudice of race, this passion for the blonde,—at least in modern times; and we find the Arabian proverb just as scornful of fairness as the German could

¹ Prose Edda, *Gylfaginning*, XXII. ² Child, *Ballads*,² I. 120.

³ See, especially, Sonnets 127, 130, 131, 132, 137, 141, 147, 150, 152.

⁴ Here we meet not only a touch of theology, but also that absurd old notion, brought out—among many other instances—in our English romance of *Octavian*, that of twins one child must be illegitimate.

be of the brunette: "Ruddy of moustachio, blue of eye, and black of heart," which matches a phrase in our old friend the *Arabian Nights*: "Blue of eye and foul of face."¹ An international summary of the whole matter may be found in a proverb quoted by Uhland:² "Beware of a black German, a white Italian, a red Spaniard, and a Dutchman — of any color!" It would seem to run counter to this doctrine that we find in all Germanic nations, from about the year 1000 of our era, a decided prejudice against red hair. The so-called proverbs of Alfred affirm the red man to be a rogue; while

Alder-wood and red hair
on good soil are rare,

is a proverb found in nearly every Germanic dialect.³ To explain this we need not drag in honest old Thor by his red beard, — not even red-haired Loki, — nor appeal to the pictures of Judas Iscariot. It is the red which verges upon black, the dusky color that is meant, like those dull flames of hell which make darkness visible. The light, ruddy color, the golden red, has always a noble and gallant connotation; of such complexion and such hair was Kaiser Friedrich Barbarossa, or the West-Goth Theodoric II., who is described by Sidonius Apollinaris as having long and curly hair, snow-white teeth, and a skin colored like milk and flushed with manly red, — evidently a pattern of kings and Germans.⁴ It is not all

rhetoric, again, when Sidonius, describing the wedding of a young Frankish prince, arrays him in glitter of gold, in flame of scarlet, in sheen of whitest silk, — but assures us that all these were easily peered by the gold of the flowing locks, and by the fairness and flush of the complexion.¹ Add to these florid graces the power to hold us by his glittering eye, and we have a kinsman of whom we need not be ashamed. Even after we have stript the rhetoric from the description, and the robes of civilization from the prince, after we have put him into a simple dress of skins, and a bit of linen, and thrust him back into his forest, there still remains a huge, keen-eyed, florid, yellow-haired person, impetuous, melancholy, cruel, passionate, fitful, with dreams of conquest, with longings dull and indefinite, with a contempt for civilization, and an eagerness to touch and keep some of its nobler elements, — a person, in short, whom no amount of ethnology is going to put on a par with the modern African savage.

How far the sense of personal beauty was developed, how far his “lassie wi’ the lint-white locks” bewitched a Germanic youth with something higher than mere physical attraction, is a question not easy to answer. We must not inject too liberal a measure of romance into that old courtship; but yet there was surely something of the grace of love even in Germanic forests. Late as the myth may be, we feel sure

¹ In the ballad *Willie o’ Winsbury*, Child,² IV. 399, we have a fine match for the older figure: —

“ But when he came the king before,
He was clad o’ the red silk,
His hair was like to threads o’ gold,
And his skin was as white as milk.”

that when the Scandinavian god falls into utter love-madness for his longing after Gerthr, whose "white arms lightened all the sea and land," this was no new viking invention, but had its prototype in the passion of many an early warrior. *Béowulf* and the epic fragments show in their phrases a monkish abstinence when speaking of women: "gold-adorned," "fair-haired," "white," "fair," are the traditional epithets. There is more sense for manly beauty than for that of woman. In the one simile applied to woman, which is found in our wreckage of Germanic poetry, she is compared with the sunbeam.¹

- Unromantic but useful is the query what this glittering and florid person had to eat. For in spite of his gigantic frame, he lacked endurance, — not so much the natural quality as that which is born of discipline, systematic campaigns, and regular supplies. That he could bear cold better than heat, hunger better than thirst, is natural criticism for an Italian; ² and Plutarch notes the advantage enjoyed in this respect by the Romans in their fight with Cimbrians at Vercellæ. No doubt, however, the uncertain amount and kind of food helped to make the Germans less patient of fatigue. Often the larder must have been bare, often filled to excess. Their feasts, says Tacitus, while not of great variety and exquisite, are yet abundant; ³ — and this is concession from a Roman of the empire. They ate the flesh of wild or half-tamed horses and of swine, with other kinds of game, mostly fresh, — *recens fera*, says Tacitus, ⁴ — but doubtless often dried or salted. Cæsar seems to have

⁴ *Ibid.* XXIII.

believed a decidedly indigestible story about the habits of a German elk and the popular mode of snaring it. He says¹ that it does not lie down, nor can it rise if it has fallen; but it takes its rest by leaning against a tree. The hunter has simply to cut nearly through such a tree and leave it standing apparently in its usual case; the elk leans against it, overturns it, and falls with it to the ground.

It must be admitted that these statements about the German larder point to nomadic life and tend to confirm the view of Jacob Grimm, who saw "nomad" writ very large over primitive Germany. But it is going too far to seize upon an assertion of Pomponius Mela to the effect that our forefathers ate raw meat,² and hastily assign them to outright savagery. For they had milk, and probably butter and cheese;³ as time went on, they used more and more meal, whether baked in bread or eaten in a thick broth. In the earliest times they had nothing save wild fruits, apples, of an ignoble sort, one may think, and berries. All our modern fruits and vegetables came from Italy, and brought their foreign names along with them. Pytheas of Marseilles, already named as the earliest visitor to our shores who came from classic land, said that German tribes by the North Sea had hardly any garden produce or domestic animals such as the Greek knew, but that they lived on millet and other plants, on roots and berries.⁴ Perhaps the earliest vegetable which the Germans imported from their

neighbors in Gaul was the leek, a plant, it would seem, of decidedly magical qualities. Thrown into one's mead, it was a safeguard against treachery;¹ and for whatever reason, when the great Helgi is born, his father comes back from battle with "a noble leek" for gift.² Even among the Anglo-Saxons there were few vegetables, and chief of these was the leek; a garden is called outright "leek-enclosure," *léac-tún*, and the gardener is "leek-ward."³ A Danish ballad quoted by Professor Child⁴ speaks of the happy land where all birds are cuckoos, all the grass is leeks, and all the streams run wine. There were, however, other Germanic vegetables. There was asparagus, or something very much like it; the radish, of extremely large size; and sweet turnips that were good enough to be imported for the express use of the Emperor Tiberius.⁵

Saxons and Frisians by the sea ate fish; and of course the Scandinavians did likewise. Montelius cites King Sigurd Syr, stepfather of St. Olaf, who gave his guests fish and milk one day, and meat and ale the next. In a lay of the Edda, old Thor, who represented the homely life of days before the vikings were in vogue, says that he has been eating "herring and oatmeal porridge."⁶ Salt was valued highly, not

only as the best of all seasonings, but also for its anti-septic qualities. It kept the hunter's game, the coast-folk's fish. In Anglo-Saxon larders, salt meat was very prominent, and hence, as Wright reminds us, arose the custom of boiling nearly all flesh that was eaten.¹ The Germans themselves seem to have had no skill in the preparation of salt, an art first developed by the Celts; but Germany was especially rich in salt-springs, and these were the cause of many a desperate fight between neighbor tribes struggling for possession. Pliny and Tacitus testify to the extremely rude fashion of salt-making among the Germans. It seems that they piled up logs in the neighborhood of such a spring, set them on fire, and then quenched the flames by liberal application of the salt water. When the fire was out, a crust of salt was found clinging to the embers.

Once more we see the close connection between a necessary or favorite article of food and the ceremonies of primitive religion. The salt-springs were places of worship, and a story told by Tacitus about the desperate war waged between Chatti and Hermunduri for the ownership of such a prize is of interest in many ways.² The Germans, we are assured, held the place holy, deemed it in the immediate neighborhood of heaven, and believed that prayers nowhere else were wafted so quickly to the gods, — gods by whose grace it came about that salt was formed whenever the waters of the spring were poured upon a heap of burning logs. In the time of Emperor Julian, several hundred years later, we find

¹ *Domestic Manners and Sentiments*, p. 26.

² *Tac. Ann.* XIII. 57.

Alamannians and Burgundians fighting for the same sort of treasure.¹ In short, salt and its not particularly congruent rival, honey, were the main condiments of the primitive German.

How far more rich was the store of an Anglo-Saxon franklin! Even a modern epicure might not be displeased with such a larder as Cockayne² has discovered. The Germans who conquered Britain did *not* "stuff their bellies with acorns," maintains this lively editor; and the Saxon descendant knew well how to live, as witness a bewildering array of flesh and fish, with such side-lights as "oyster patties" and "junkets," and minor meats galore. We have testimony, a little later, about the boy's ordinary fare in an Anglo-Saxon monastery, — "worts and eggs, fish and cheese, butter and beans, and all clean things." Flesh he rarely got.³ But we cannot argue back from all this into the German forests. Only what seems sanctioned by an old tradition, or has come in touch with cult, has any value of this sort. For example, cheese enters into cult; even in modern times it was thrown into a sacred well in Scotland, hence called Cheesewell, by way of propitiation and offering.⁴ Frisians and Anglo-Saxons had an ordeal called the *corsnæd*, in which a bit of bread and cheese was put into the mouth of the accused; if he swallowed it, good; if he was choked, it was a sign of guilt.⁵ As for milk, we have the sacred cow

⁴ Liebrecht, *Otia Imperialia*, p. 10.

⁵ R. A. 931 f. Rochholz, *Deutscher Glaube und Brauch*, p. 12 ff., gives a number of cases when cheese or milk formed the staple of a myth, and hence belonged to the tradition of cult.

already noted, or the goat which in later Valhalla belief feeds upon the branches of the World-Ash and gives the milk of immortality to heroes of Odin. Here, too, belongs butter. Hehn draws a geographical line between the realm of "beer and butter" and the realm of wine and oil. According to Pliny's *Natural History*,¹ the Germans "made out of milk an article called butter, noblest food among barbarous races and one which sundered rich from poor." Butter was even used as a sort of ointment, northern pendant to the oil of southern lands. Milk and its products were of supreme importance to the nomad; no wonder that Scandinavian goat, German cow, and Slavonic mare should loom out of the past in such heroic proportions. With the herd there must be a dog, and very properly we find a magnified and non-natural dog barking fearfully as herald of Ragnarök, the end of all things, in a late Scandinavian myth.² The tradition of nomadic times pure and simple would seem to be preserved in Beda's explanation of the Anglo-Saxon name for the month of May, — "Three-Milk-Month"; that is, says Beda, the month when the cows (*pecora*) used to be milked three times a day: "So great was the abundance which once reigned in Britain and Germany."³

With butter, as soon as any of the necessary grain can be raised, is ranged beer, which gradually takes the place of mead, the original Aryan beverage. On the subject of beer Hehn lavishes his learning with a

¹ XXVIII. 133; Hehn, *Culturpfl.* p. 132.

² The Cimbrians had watch-dogs with them in Italy.

fond indulgence. Beer, as he tells us,¹ once held far wider sway than now; Egypt knew it, and Spain, and many a land which later bore only the olive and the grape. Pytheas of Marseilles found our ancestors drinking mead and beer; while among the Celts of Gaul beer was the common drink, and only the rich and great used wine. This was the case in England, and for even better reasons. In the colloquy just quoted, the master asks our monastery-boy what he drinks. "Ale [beer] if I have it, or water if I have no ale." "Don't you drink wine?" "I am not so rich as to buy me wine; and wine is not a drink for children or fools, but for old and wise people." The Emperor Julian made a satiric epigram in Greek on this custom of drinking beer, which in his day was so common with Gauls and Belgians.² For Germans, Tacitus bears ample testimony; but inasmuch as beer is inseparable from agriculture, we may argue not only that our ancestors of that time had taken some steps above the nomadic state, but also that beer could not have been their original drink.³ In earliest times mead ruled alone. Grimm sees in the name of the English river Medway a trace of the nomadic beverage; Medway would be "mead-cup," and there would be the mythical and classical whim of a stream "flowing from the horn or urn of a river god."⁴ Certain is the name of an Anglo-Saxon banquet-room; it is a "mead-hall," *medo-ærn*, where,

¹ *Culturpfl.* p. 117 ff.

² Cider also was used by the Gauls. Amm. Marc. XV. 12, 4.

³ There are traces of mead-drinking in Greece previous to the epoch of wine. Hehn approves the etymology of *bier* from *bibere*, and *ale* from *oleum*; neither word nor thing original. *Culturpfl.* p. 125. Others assail the etymology, and claim native origin.

⁴ *G. D. S.* 457.

however, beer-drinking, *béor-pegu*, goes on, and the ale-cup, *ealo-wêge*, makes its round. Wine, of course, came later to the Germans, and in the time of Tacitus was bought now and then from Roman merchants on the border,—no national drink.¹ Its origin is probably Semitic. We owe this race, along with the art of crushing from grapes the sweet poison of misused wine, the nobler gifts of measuring, of money, of the alphabet, and of what Hehn calls the profound abstraction, Monotheism,²—a heavy balance in favor of the Orient! But let us return to our beer. Cæsar does not mention it, nor Pliny; it was in its beginnings, like the parent art of agriculture; but Tacitus speaks very distinctly, and opens his twenty-third “chapter” as follows: “For drink they have a liquor brought into some resemblance to wine by process of fermentation³ from barley or wheat.”⁴ He gives no name for this liquor, but it is undoubtedly beer; and the trick of making it must have been learned from the Celts of the lower Rhine and the Danube.⁵ But it was not by any means modern beer, and Hehn warns the enthusiastic German youth not to fancy his remote ancestor indulging in such a beverage as the Fatherland boasts to-day; for hops, a most important element, were not used in breweries until the Middle Ages. Naturally we find beer in ceremonies of Germanic religion. St. Columbanus, about the year 600, surprised a group of Suevi who were sit-

¹ It was prohibited as imported ware among the Suevi, because it made men soft and effeminate. Cæsar *B. G.* IV. 2.

ting around a huge keg or vat¹ of beer, which they intended to offer to their god Woden; and later, as a more indirect sacrifice, we hear of tithes paid to the church in beer.

How much did the Germans drink? This parlous question is sufficiently answered by Tacitus. The German meals, he says, are frugal, but with regard to thirst, there is not the same temperance; and it is evident that these barbaric potations dismayed the moderate Roman. Much in the fashion of our familiar laments over the weakness of the Red Man, Tacitus bewails as a moralist and exults as a Roman that this German "is conquered as easily by his own vices as by foreign arms." But even immoderate drinking has its amenities; and civilization has witnessed as much excess as barbarism itself. How far the refinements which we easily see in the banquets of later Germanic races—those, for example, described in *Béowulf*—may be assumed for earlier times, is a matter of doubt. We find certain courtesies of feasting prescribed by law for the Anglo-Saxons. A Kentish law of the seventh century ordains that if any one shall take away another's stoup (*stéap*) or cup where men are peaceably drinking, let him pay *according to the old law* one shilling to the owner of the house, six shillings to the offended person, and twelve shillings to the king.² As Schmid points out, to remove a man's drinking-cup was a palpable insult, and would easily precipitate a quarrel among men who were wont to plead guilty to any charge sooner than to that of being pigeon-livered. The next laws

¹ "Vasque magnum quod vulgo *cupam* vocant." See *D. M.*⁴ 45.

² Schmid, *Ag. Ges.* p. 12, §§ 12, 13, 14.

impose a fine of one shilling, paid to the owner of a house where people are drinking, upon him who draws his arms in such a company, and twelve shillings to the king; and if the house (*flet*, really the floor) be stained with blood, one must pay to the man his *mundbyrd*, a fine varying according to the rank of the person in question. The law of Ine, after fixing penalties for several sorts of fighting, goes on to say that if the quarrel begins at a banquet (*gebéor-scipe*) or beer-drinking, and if one of the disputants bears it all with patience, the other is to pay a fine of thirty shillings.¹ In a law of Æthelred, of course much later, the various breaches of decorum taper down from the king's peace itself to the good order of an alehouse; the fine for breaking the latter depends on whether you kill your man, or simply wound him.² All these laws testify to the Germanic habit of drinking, quarrelling, and fighting, with quarrelling proper as a vanishing element in the situation; words soon yielded to blows, and the German would rather strike than revile. Holtzmann quotes very happily from the Nibelungen Lay: —

. . . How fits it heroes bold,
Like a pack of women to quarrel and to scold?

Evidently there was a certain measure of safety, if one could do it, in following the implied advice in Ine's law about the man who bears all in patience. To let the tongue wag was dangerous. In an Anglo-Saxon poem on the Destiny of Men,³ we are told that the sword shall slay many a man on the ale-

¹ Schmid, p. 24.

² Ibid. p. 212.

³ vv. 48 ff.

bench, many an angry tippler heavy with wine; "he hath been too hasty with his tongue."

Still, the flyting was by no means unknown at these banquets. There seems to have been a sort of formal entertainment in which first one, then the other, would hurl smart but pointed remarks at the opponent, delicacy being no object. For swing and dash, an Old Norse poem known as *Lokasenna*, "The Flyting of Loki," takes easy precedence. Loki enters a hall where all the other gods and goddesses are assembled, demands drink, and passes the time of day with each deity in turn. The following, in Vigfusson and Powell's translation,¹ may serve as example:—

Byggvi. Be sure, if I had a heritage like Frey, the Ingowin, and such a seemly seat, I would pound thee to marrow, thou ill-omened crow, and maul thine every limb.

Loki. What is the tiny thing I see there wagging its tail, snuffling about (doglike)? Thou wilt be always at Frey's hearth, yapping at the quern.

Milder, but still forcible, is the flyting between *Béowulf* and *Hunferth*, which will be found below;² while the language of the dialogue between *Salomon* and *Saturn*, and of the famous dispute between *Soul* and *Body*, may be termed parliamentary. Still another fruit of the banquet was the personal boast,—in Anglo-Saxon, *gilpewide*,—the proclamation of one's

¹ *C. P. B. I.* 107.

² See p. 114. For a vigorous aftergrowth of this style, see *Dunbar's Flyting with Kennedy*; as to influence of the French *jeu-parti*, see *Schipper, William Dunbar*, p. 64 f. *Schipper*, by the way, in his edition of *Dunbar*, pp. 141, 151, thinks there is little connection of development between *Dunbar's flyting* and these Germanic specimens. He assumes Celtic influence and French models.

own and singular virtues, together with vigorous revilings of one's foe, and promises of deeds of valor in the next fight.

Yet the outcome of revelry was not always of this bellicose nature. In the frankness and brotherly confidence begotten of their cups, the Germans opened heart and mouth in council and discussed public affairs. Reserve and suspicion were banished. When they were sober again, they made a decision upon the question which they had debated at their feast; and thus, says Tacitus, in admiration of so excellent an arrangement, "they deliberate at a time when concealment and deception are out of the question, and they come to a conclusion when mistakes are impossible."¹ He omits to note the probable interval of repose, which may have done its good service as well as the other factors; for Germanicus surprised the Marsi after one of their great banquets, and the legions had easy work with a mass of prone and drowsy warriors, — "drunken," as the historian calls them.²

The German did not simply eat and grow strong, but he helped nature by exercise. He also understood the value of baths, for sanitary if not for personal and altruistic reasons. Races which wear fur or skins of any sort, instead of linen or similar texture, are apt to suffer from vermin to an almost incredible degree; so that the story which follows may well come, as Hehn remarks, from the sincerest depths of Germanic consciousness. A certain king, in an Old Norse saga,

¹ *Germ.* XXII. The Rev. Mr. Sterne, in his *Tristram Shandy*, applauds this arrangement. Similar practices prevailed among the Persians, and with uncivilized races in South America.

² *Temulentos*; and they were "stratis etiam tum per cubilia propterque mensas. . . ." *Tac. Ann.* I. 50.

catches a merman, and the latter lives among human beings long enough to know their ways. The king asks him what has pleased him best of all that he has seen. "Cold water," he answered, "for the eyes; flesh for the teeth; and linen for the body."¹ When the Germans took to linen, — which meant that they first learned to raise flax, — this must have mitigated their sufferings; but even linen could not entirely protect them from the pests, and hence a passion for bathing. The Cimbrians were bathing when they were surprised by the Romans at Aquæ Sextiæ. Warm baths were a great luxury; and in later times a German house had its bath-room, even among the less flourishing classes. In Iceland the warm springs were used eagerly for this purpose; and such natural baths were everywhere coveted property and caused many a sharp struggle for possession. The Goths were plundering Thrace, says Jordanes,² and found on their march certain warm springs; these stayed for a while their impetuous career, and they lingered "many days" to enjoy the luxury. Of course, as Jordanes tells us in this special case, there was always more or less medicinal and healing virtue ascribed to such a well and to the divinity which protected it.

From the Germanic bath we properly pass to the Germanic wardrobe. Linen has already been mentioned; but it is doubtful whether it formed part of the German's original clothing.³ It was introduced,

¹ Hehn, p. 153; Weinhold, *Altnordisches Leben*, p. 160. ² Cap. XX.

³ Traces of linen, however, are found by antiquaries in remains of the Scandinavian bronze age, along with proofs of agriculture. See Kålund in Paul, *Grundr. d. germ. Phil.* II. 2, 210.

however, very early in the historical period. Goths, Franks, and the rest come upon the stage dressed in linen as well as skins; "dirty linen and short skins" is the costume in which certain West-Goths make their appearance.¹ Wool, on the other hand, is of very ancient date as an element in our forefathers' clothing. A find, described by Montelius,² shows excellent woollen garments in use in Denmark during the bronze age,—that is, at least as early as 500 B.C. The outfit consists of a cap, a long mantle, and a sort of covering for the legs. Another find shows the clothing of a woman of the same period; it was much like the dress of the man, and was abundant in quantity. We even find nets for the hair.

With regard to the clothing of Germans in the time of Tacitus, there are two opinions. The *Germania* tells us that the common garment of the people was a mantle or cloak fastened by a buckle or even by a common thorn. Without other clothing (*cetera intecti*) they spend whole days by the fireside. The richest people are distinguished by a garment (*veste*), which is not worn loose, in the fashion of Sarmatia and Parthia, but rather clings to the figure and the limbs. Moreover, the Germans wear skins of wild beasts, paying more attention to selection and adornment, the further they are removed from Roman influences. The dress of the women is like that of the men; only the women are wont to wrap themselves in garments of linen, which they embroider with purple,³ but use

¹ Hehn, p. 151.

² *Civilization of Sweden in Ancient Times*, trans. by Woods, 1888, p. 59 ff.

³ As the commentators point out, this is not the Roman purple, but probably a native vegetable dye.

without sleeves, leaving bare the arms, the shoulders, and the upper part of the breast. So far Tacitus.¹ Pomponius Mela, the geographer, follows the instincts of his kind in making barbarism very barbarous indeed. Even in severe winter weather, he says, the German men are clad in mantles,² or with the bark of trees; and it is by exposure to cold that they harden their huge frames. Boys go naked.³ Lastly, Cæsar and his Suevi may give evidence. These warlike Germans are described in the usual Roman fashion, as undisciplined and impetuous giants, who in that cold climate go without any clothing save skins, and these so small as to leave large portions of the body utterly bare.⁴ Cæsar says the same thing of the Germans as a race,—they wear skins or aprons, which leave naked a large part of the body.⁵

It must be admitted that these accounts make for a very slender outfit of clothing. But Müllenhoff enters the lists for a larger Germanic wardrobe.⁶ In the first place, he bids us look at the climate; it demanded at least a sufficient undergarment made of woollen or linen, together with a mantle or jacket. Instead of understanding Tacitus to say that the richest Germans are distinguished “by a garment”

¹ *Germ.* XVII.

² *Sagis*: the same word which Tacitus uses; probably made of thick and rough woollen material.

³ Pomp. Mela, III. 3: “qui habitant immanes sunt animis atque corporibus et ad insitam feritatem vaste utraque exercent, bellando animos, corpora assuetudine laborum, maxime frigoris. nudi agunt antequam puberes sint, et longissima apud eos pueritia est. viri sagis velantur aut libris arborum quamvis sæva hieme.”

⁴ Cæsar *B. G.* IV. 1.

⁵ *Ibid.* VI. 21.

⁶ In *Haupt's Zeitschrift*, X. 553 ff.

which fits closely to the figure, Müllenhoff would read, "by *the* garment," and would make the richness and adornment of its material the test of its wearer's rank. That is, he would make not only the *sagum*, but also the *vestis*, common to all Germans; whereas many commentators understand Tacitus to mean that the rich have a peculiar kind of garment, an exceptional garment.¹ This view is borne out by the testimony of Pomponius Mela, and of Cæsar, who does not even mention the mantle. On the other hand, however, the complete woollen outfit found in Denmark, later customs, and several other considerations, go to support the claim of Müllenhoff. The neighboring Gauls wore trousers and shoes, — Gallia Bracata would be nearest Germany in these respects, — and a northern climate would force some such habit upon the nations. Summer and winter would naturally make a difference, and Germans may have showed themselves oftenest to Roman eyes in scanty raiment, such as we know they affected for the hour of battle. Finally, the rhetorical impulses of the most truthful and sober Roman would exaggerate every difference of garb between the two races. It may well be true, remarks Müllenhoff, that a German warrior would sit whole days by his fire in such an undress as Tacitus describes; but it is not said that he went thus out of doors. Müllenhoff gives in good faith a somewhat amusing illustration of the ancestral habit drawn from the ways of a modern German professor. "Does not many a man," he asks, "content himself, when he rises from bed, with dressing-gown, one other garment, and slippers, and

¹ Baumstark, *Germania*, pp. 585, 592.

so work through the morning until he arrays himself to go out?"

The question seems to hinge on the *vestis* of Tacitus, — whether it was a general garment worn by high and low, which differed in its making and material, or whether it was a “lending” of Gallic or other culture, foreign to the Sabine austerity of a true primitive German. It is not an easy question to decide, and the doctors disagree radically. On one of the triumphal columns in Rome, German soldiers are represented in trousers and shoes, and, for the rest, either in a short doublet or else naked to the girdle. Of course they fought in scanty clothing;¹ and Paul the Deacon even tells us of a battle between his countrymen and the Heruli, where the latter went into the fight with nothing but a cloth about the loins, “either to fight more freely or else to show contempt for wounds”: the explanation, however, would seem to make this uniform an unusual one. Children at play wore little clothing; witness Pomponius Mela above, and Tacitus with his *nudi ac sordidi*, “naked and dirty.”

Even if we take the description of Tacitus, much as it leaves to be desired, for an authentic description of the Germanic dress, we may fancy at least a noble or wealthy freeman of that time in woollen *sagum*, or cloak, woollen, or perhaps now and then linen undergarment, something like trousers, and his inevitable arms. We may safely add shoes, made out of leather which was tanned with the aid of bark. Clothing was made chiefly by the women, who span and wove steadily through the long German winter; for Egypt

¹ Tac. *Hist.* II. 22.

is the only country of old times where men did the weaving.¹ German women had great skill in this art, and may well have taken pride in the raiment of their sires and husbands, and indeed in their own garb. The priestesses who came with the Cimbrians to Italy had white robes, with a girdle, and mantles of fine linen. Men whose wives and daughters are famous websters and spinsters — Pliny waxes fairly enthusiastic on this subject — could not have been like African savages, and would hardly have gone naked for the sake of enduring the cold. A Danish variation of “carrying coals to Newcastle” is “to give white bread to a baker’s boy”; and surely it is the same thing when we assert that foreign culture had to bring the merest beginnings of raiment to a race whose women were experts in weaving and spinning! The tradition held. Charlemagne, who clung to the old Frankish dress, made his daughters learn to spin and weave. Even in the time of Tacitus, rent or tribute from slave to master was often paid in clothing.² This, too, is hardly characteristic of the naked savage.

We may conclude our brief description of Germanic dress, just as we began it, with a notice of some garments found in a bog not far from the old home of the Angles on the Cimbrian peninsula. These clothes were in a good state of preservation, and seem to date from about the year 300 A.D.³ They probably belonged to a wealthy man, and consist of two mantles of a square piece of woollen cloth (the *sagum* of

¹ Lippert, *Culturgeschichte*, I. 173.

² *Germ.* XXV.

³ Weinhold, *Deutsche Frauen*,² II. 221. His description is taken from the Danish; the articles themselves are in the museum at Kiel.

Tacitus), with fringe one side and frogged on the other, and originally green in hue. There was also a coat of woollen, with sleeves of stronger material than the rest; of still heavier material were the two pairs of long trousers, to which stockings were sewed fast. There was a place for the belt. Further, there were leather sandals with attempt at ornamentation. Not unlike this fashion was the garb of those Hengists and Horsas, who, not simply "in 449," but many long years before, were wont to take ship for the tempting shores of Britain.

It is a well-known fact in ethnology that the custom of wearing clothes springs in the first instance not from the sense of decency, and hardly from the desire of warmth, but from the passion for adornment. Ornaments were familiar to our remotest ancestors. In the stone age of Scandinavia, more than a thousand years before the beginning of our era, men and women had an abundant supply of this aid to individuality, — which some philosopher has discovered to be the cause of personal adornment, — mainly articles made of amber. Some centuries later, in the bronze age of the same country, amber has yielded to metal, and rings, buckles, buttons, combs, and the like, are found in great profusion.¹ The yet later Germans were not without such adornments. Many articles, thinks the sanguine Waitz,² were of domestic manufacture; but the greater part were taken as booty or obtained in the way of barter. Gold, in the historic period, was furnished by the Byzantine coins sent to Goths on the Danube, and thence by the old trade-

¹ Kålund in Paul's *Grundr. d. germ. Phil.* II. 2, 210.

² *Verfassungsges.* I. 21, note.

route through Poland to the Vistula, and so to the Baltic Sea; and this tribute-gold may have been worked into rings and collars by the domestic smiths. Perhaps, however, the jewellers of Byzantium sent actual ornaments to their northern trade, and half-breed bagmen may have wheedled into purchase many a chieftain and many a matron of the German forests.¹ Like weapons, the old Germanic ornaments had a pedigree, and in the poetry of the day are called "work of giants," "the making of old days," "heirlooms of price." In *Béowulf*, the Danish king says that he has settled a feud by paying tribute to the enemy, —

To the Wylfings sent, o'er the water-ridges,
olden treasure . . .²

and at the end of the same epic we are told that the hoard, watched by a dragon and concealed in a cave, consists of —

old-time treasure . . .
the huge bequest of high-born race.³

This mystery and this antiquity which hedge about Germanic treasure would seem to indicate that most of it was bought or stolen, and the making of it no common and palpable affair, to be seen in any goldsmith's shop. The same sense of mystery induced the poets of Christian days to talk of "heathen gold," which had come down from the olden time. As to the value of these ornaments in the regard of their owners, we have the sequence of Florus, "horses,

¹ See also Montelius, work quoted, p. 126 f.

² *Béow.* 472.

³ *Ibid.* 2233 ff.

cattle, and necklaces," as the summary of German spoils made by Drusus.

Nearly all the metals seem to have been known, but neither gold nor silver was mined by the natives; and hence the lack of costly plate. When Tacitus tells us that his Germans care no more for silver than for common earthen vessels, we may certainly assume a rhetorical rebuke meant for the Roman collectors of such ware at fabulous prices, — German simplicity once more a foil to imperial prodigality. Massive articles made of the precious metals, such as those silver vases which the historian mentions as now and then seen in Germany, would hardly appeal to native taste; but ornaments of these metals, as well as of amber and glass, were freely worn by men and women. The conventional adjective of the minstrel, when he sings about dames of high degree, is "gold-decked," "gold-laden"; such is Hrothgar's queen in *Béowulf*, and such is even the Hebrew Judith, whom the Anglo-Saxon poet calls "adorned with rings." But the men by no means despised such decoration, especially kings and chieftains, who are called "gold-givers" and "ring-breakers" from their habit of wearing upon the arm spirals of gold, which they were wont to break off and bestow upon a valiant clansman. Neck-rings of massive gold — the so-called "snake-rings" — were the rarest and costliest of these treasures, arm-rings and finger-rings the commonest; besides, we find in the graves necklaces, clasps for mantles, buckles, and so on, made of gold, of silver, and of a mixture of the two metals. Perhaps the spirals are best represented in the museums of Europe; for not only the warrior but the singer was rewarded by these rings,

and sang the bounty of his patron from tribe to tribe. Widsith, the ideal minstrel of early Anglo-Saxon times, tells us : —

And from the Burgundians got I a ring ;
there Guthhere gave me glittering treasure
in pay for my song, — no puny king !¹

Ælfwine, too (Alboin), is generous to the minstrel, and Ermanric gives him another ring, which he spends for land, only to have gift of yet another from his gracious queen : —

Thus moved her fame thro' many lands,
whenever chanced I was charged to say
where under heaven I'd heard of the best
gold-deckt queen her gifts dividing.²

“To have gift of red rings,” as Weinhold remarks, sounds much better than to draw wages or to take money ; but it was all the same thing. The love of these rings was as keen as the love of money nowadays, and the appetite increased with what it fed upon. The Chatti, who regarded the wearing of rings as a sign of slavery, make, if the story which Tacitus tells³ be true, an exception. It was a franker and more childish love of gold than our modern and tempered affection, in days when we have so many people to tell us of the vanity of riches. For instance, in the Hildebrand Lay — that solitary bit of jetsam from the wreck of strictly German heroic poetry — a chieftain returning home after years of exile finds on the border of his land the son whom he left an infant in the cradle, now a warrior in arms. The son insists

¹ *Widsið*, 65 ff.

² *Ibid.* 99 ff.

³ *Germ.* XXXI.

upon fighting his father, whom he deems to be an impostor, and the old hero expostulates in vain. When, finally, all persuasion fails, the sire appeals to the last infirmity of barbaric mind, and offers his arm-rings: —

Unwound from arm winding rings
of Kaisergold wrought. . . .

In fact, plenty of this treasure and a good wife — with flocks and herds enough, *bien entendu* — made up the domestic ideal of the German. Says Giant Thrym in the Edda, waiting impatiently for the arrival of his bride: “Golden-horned cattle go about in my yard, all-black oxen. . . . I have plenty of jewels and plenty of rings, — I lack nothing but Freyja!”¹

Finally, as in so many cases, the thing dear and desirable to man is lovely in the sight of the gods. Rings occur in cult and in myth. In the rites of Scandinavian heathendom, an oath was sworn upon the holy ring of the altar;² it was smeared with blood of the sacrifice, and was worn on the hand of the chieftain at all assemblies of the people. In the myths, we find Odin taking oath upon a ring. An interesting case is mentioned by Maurer,³ where the vikings in England during King Alfred’s reign solemnly swear to leave the country. They take oath first upon the arm-ring, and then upon the Christian

¹ *prymskviða*, 92 ff. See *C. P. B.* I. 179.

² Maurer, *Bekehrung d. Norweg. Stämme*, II. 221; and II. 190, note; Grimm, *R. A.* 895 f.; Vigfusson and Powell, *C. P. B.* 1, 422 ff. The ring was of gold or silver, and weighed from two to twenty ounces.

³ Work quoted, I. 68. Maurer notes that only Asser and Florence of Worcester mention the relics. See also *Anglo-Saxon Chronicle*, anno 876.

relics. Our usual "magnified and non-natural" ring is also forthcoming in the pretty Scandinavian myth — allusions to it occur in Anglo-Saxon poetry — of the necklace belonging to the goddess Freyja (or Frija), made for her by the dwarfish smiths of the hillside.¹ Grimm compares it with the necklace, and even the cestus of Venus;² and the interpreters are ready with a host of explanations, — grass, crops, twilight, stars, what not. Our main interest lies in the fact that old Germans, like old Greeks, gave a necklace to their goddess of love. We may conclude the subject with a bit of Germanic paraphrase. The translator of the gospels who made the Old-Saxon *Héliand*, with the passage before him: "Cast not your pearls before swine," puts it as follows: "Ye shall not hang your pearls on the neck of swine, the treasure of jewels, *the holy necklace*," — and this last alliterative expression, *hêlag halsmeni*, Vilmar counts as a bit of the old heathendom.³

CHAPTER IV

THE HOME

Hatred of cities — Underground dwellings — Houses wooden and frail — Construction, and later improvements — The *burg*, and the hall — Descriptions in *Béowulf* — Banquet, songs, flyting, etc. — Amusements and vices — Hunting — The primitive house compared with modern dwellings.

WE pass to the Germanic house. The nomad has little need of cities, which are indeed a good index of civilization, if one bears in mind Aristotle's definition of man as "a political being," a being with gregarious instincts. Cities, we know, the German could not brook; his nomadic instincts were too strong, and these hated walls of stone, which so often set a limit to his raid and kept him from his booty, were but the *munimenta servitii*, ramparts and refuge of slaves.¹ Such confinement, cried a German orator, robs even wild beasts of their courage. Indeed, the city is in every way offspring and lover of peace. It is interesting, as Leo points out,² to note that among all Germanic races, the names of towns have no warlike reference such as we find in the names of people. Towns are named after races and families (Canterbury, Birmingham), or even after trees, stones, and natural

¹ Tac. *Hist.* IV. 64.

² *Rectitudines Singularum Personarum*, p. 14.

peculiarities. Not till he became at least in part a man of peace, did the German build his towns. Such cities as he took from his enemies were given over to plunder, and then left to crumble away in neglect. So fared the Roman towns of Britain at the hands of our invading forefathers.¹

When actual German towns are mentioned as the seat of chieftain or king, nothing is to be understood which could compare with the Roman city, — only a cluster of wooden houses, convenient place for the assembly of tribes or clans. Such may have been Mattium, the capital town of the Chatti,² which Germanicus burnt on one of his raids. This was doubtless a very easy task, since there was nothing used but wood in the construction of a German house. The use of stone, like so many other arts, was quite foreign to the north of Europe; it is first found “by the southeastern corner of the Mediterranean, and spreads, like the use of wine and oil, step by step along the coasts and peninsulas of southern Europe, and thence over the civilized world.”³ Stone masonry meant to the German something mysterious, uncanny, the doing of demigods in old time; and so it easily fell under the ban of the supernatural. This massive solidity seemed hardly of human origin; and the earliest Englishmen called such a building “the burg of

¹ For example, the city of Anderida. Whether our Anglo-Saxon poem, “The Ruin,” is to be referred to the Roman city of Bath — as Leo and Professor Earle think it should be — is doubtful. See Wülker, *Grundr. d. ags. Lit.* p. 211 ff., for the various opinions. Green (*The Making of England*) and Grant Allen (*Anglo-Saxon Britain*, p. 47) hold that the Saxons left the Roman cities of Britain to decay; but T. Wright (*The Celt, the Roman, and the Saxon*, p. 510) asserts that such towns were not generally destroyed.

² Tac. *Ann.* I. 56.

³ Hehn, p. 111.

giants," "the giants' ancient work." In the *Héliand*, "greatest of stone-works" is the phrase applied to the temple at Jerusalem. Moreover, it is not unlikely that Stonehenge and other works of the sort are monuments of a race which preceded Aryans in the possession of southern and western Europe, a race which "stretched from the Nile valley along North Africa, and so through Spain and France to the Atlantic."¹

In the time of Tacitus, the Germanic house was built entirely of wood, — etymology tells us that Latin *domus* and English *timber* are the same word, — and was either an isolated dwelling surrounded by cabins for slaves and dependents, like the modern *Hof* in Baden and Westphalia, or else stood in a village. The latter is the type of house in our *hâm* or *tân*. The house itself was not very substantial, if we may argue from the custom of going underground in winter; and was probably even in the time of our historian a comparatively new experiment. The primitive house must be sought for the northern tribes mainly in those same underground dwellings which so rudely blot our picture of the Germanic home. These are not specially Germanic;² Scythians, Armenians, races from all quarters of the globe, have used them. Hehn makes the later house an outgrowth of this primitive burrow; from a mere cave, the dwelling grew in size and form, and "little by little rose the roof of turf, and the cavern under the house served at last only for winter and the abode of the women." Villages made up of such houses can still be seen in Russia. We must not shut

¹ Hehn, p. 114.

² Again see Hehn's admirable work, p. 436 f.

our eyes to the darker side of Germanic life which this dwelling shows us; in evading the cold of winter, our forefathers found an atmosphere foul almost to suffocation, and abundance of every sort of vermin, — as is still the case with many places in Siberia. Yet here sat the women of the Germanic family and, as Pliny tells us, wove and spun, producing their exquisite linen in spite of all the squalor. Indeed, Virgil paints us a far cosier scene:¹ “For the people,² they keep careless holiday in caves delved deep under the earth, with store of timber, nay, whole elms pushed up to the hearth, and heaped on the blaze — there they lengthen out the night in games, and jovially imitate draughts of the wine with fermented grains and acid service-juice.”³

In later times than those which Tacitus describes, the Norwegian farmer had a subterranean room by his house, or even under it, with a secret passage leading afield, which served as an escape from the attacks of the foe or from a sudden outbreak of fire.⁴

Such was the nomadic German's winter home. In summer he had his wagon-like house, which could be pitched, after the fashion of a tent, for a day or two; and which, even after agriculture had begun to tighten its hold and fasten men to the soil, was still a very flimsy affair. The primitive German, though led by his fate to the forest with its abundant material for building, set up nevertheless no substantial house, — why should he do it? *Ubi bene, ibi patria*; all he asked was grazing and hunting and the coveted salt-

¹ *Georg.* III. 376 ff.

² Of the north, — Scythia, Germany, — “the frozen north” generally.

³ Conington's translation. The beverage is beer.

⁴ Weinhold, *Altnord. Leben*, p. 227.

spring.¹ Tiles, mortar, and the like were unknown to the German; and he seems to have been long in learning to use actual timber. Wattled work, twigs or flexible branches woven together, seemed to give enough stability for all his purposes; and even on the column of Marcus Aurelius what we may take to be contemporary German houses are "of cylindrical shape with round vaulted roof, no window, and rectangular door; they appear to be woven of rushes or twigs, and are bound about with cords." Tacitus says the sole material for German houses of his time is wood;² and this we may take to include the just-described twigs and rushes of the later Quadi and Marcomanni. When the German settled down to till the fields, he began to use the heavy rough-hewn timber of his forest. Nevertheless, the nomadic trick of carrying about parts of one's house was slow to die out. The Aryan's dwelling was his temple; there hovered the souls of his ancestors, and there he had often buried their bodies. When the Norwegian emigration to Iceland was in progress, certain men arriving off the island coast, and ignorant where they ought to land, threw into the sea the house-posts which they had brought with them; wherever the timbers drifted to the shore, in that spot they built their new abode.³ Parts of a heathen temple were also carried to Iceland.

¹ Hehn quotes Seneca *de Prov.* IV. 4: "Nulla illis domicilia nullæque sedes sunt, nisi quas lassitudo in diem posuit."

² *Germ.* XVI.

³ *Eyrbyggiasaga*, in P. E. Müller's *Sagabibliothek*, I. 189 f. For the rest, R. Henning, *Das deutsche Haus*, "Quellen und Forschungen," No. 47, Strassburg, 1882, p. 163 ff., gives examples of such a removal of houses, taken from Indian, Greek, and modern German history. See also below, p. 443.

Evidently the house which Tacitus describes must have been a very light structure, wholly made of wood, or with plaited work in the less stable parts. According to William of Malmesbury, the first Christian church in England was of the wattled material or hurdle referred to above. Foundation and floors are of more recent date, and the Norse *flet* is simply the earth itself stamped hard and firm. The modern peasant-house, which best shows in survival our old Germanic dwelling, is built directly on the earth, — this is particularly true of Saxony, — or else on a foundation made of posts.¹ To be sure, Professor Moritz Heyne, in his excellent monograph on the hall described in *Béowulf*,² says that all Anglo-Saxon houses had a stone foundation, and quotes both Anglo-Saxon and Gothic words in support of the assertion. But the general words for “foundation” do not prove for primitive times the existence of the specific part of a house, being rather applied later to the imitations of Roman architecture. Further proof of the absence of any elaborate foundation is seen in certain old German laws which seem to us not far removed from burlesque. But our ancestors doubtless took very seriously the law providing punishment for any man who should dig his way under the walls of a house, and so make criminal entrance. Still more suggestive is the ordinance against him who throws down or tears apart another man’s house.³ Further proof of frailty comes from the Anglo-Saxon, where the “tree-wright,” as a builder was called, certainly did not make houses which would last till doomsday. Wright⁴

³ Hehn, p. 114.

⁴ *Domestic Manners and Sentiments*, p. 14.

calls attention to an episode in the story of Hereward, where the "bower" or ladies' room of a certain house was built in such a weak fashion, that when one day a bear broke loose and rushed for the bower, in which the lady of the mansion had taken shelter, it was only the prompt slaughter of the bear that saved her.

The roof of the Germanic house was made of reeds or straw, was steep, and projected over the sides. By the nature of the case, fire must have been a dreaded foe; and the burning of a German village is often mentioned in history as well as pictured on columns of triumph in Rome. In later times, the German lighted his hall in the long winter evenings with flaming torches, or with candles, — mere lumps of fat, — and the fire burned freely on the middle of the floor.¹ Very picturesque was the Old Norse hall with its blazing fires, of which the Sagas and the Edda tell us; but the element of danger, said always to heighten the romantic, was not far to seek. Roof and walls in this constant smoke would dry to a perilous extent; a bit of quarrel in the midst of drinking and revels, and we can imagine many an overturned torch or scattered fire, and many a banquet hall bursting into sudden flames. This wild gleam of fire lights up our old poetry on every hand. Hrothgar's palace, in *Béowulf*, is one day destined to fall a prey to "hostile waves of flame."

There towered the hall
 high and hornéd; the hot waves bidding
 of angry flame. . . .²

¹ "... accenso quidem foco in medio et calido effecto cenaculo. . . ." Beda, *Ecc. Hist.* II. 13.

² *Béow.* 81 f.

The fine fragment of *Finnsburg* alludes to this as a common fate of castles ; while for Old Norse, Loki at the end of his famous flyting predicts a like destiny for the hall where he has been feasting.¹ In the Nial-saga, most dramatic of all the Icelandic stories, we are told how the avengers, letting "housecarls" and women and children first go out, set Nial's house in flames. Similar flames, but on a far grander scale, and with an epic splendor, light up the tragic close of the Nibelungen Lay. Moreover, even if earthly flame spared, one had to reckon with the heavens. Lightning made sad havoc, and the Saxon Chronicle tells how one year "the wild fire" destroyed a vast amount of property.²

The proportion of adornment to utility in the German's dress gives us a hint of what we may expect in his house. Frail as his dwelling might be, and built for the simplest need, it nevertheless showed an incipient decoration ; and he began to adorn it long before he had made what we should call the merest beginnings of comfort. We learn from Tacitus that the Germanic house was painted here and there with a glistening color, which was obtained from the earth, — probably of the description still found in the "ochre-swamps" of the Harz region ; but whether this painting was exterior or interior, or both, is hard to understand from the difficult passage of the *Germania*.³ In any case, the early German painted his

² Our ballads are often as vivid as the sagas. See "Edom O'Gordon," "The Fire of Frendraught," and other songs of the border. Child, *Ballads*,² VI., VII.

³ Cap. XVI. *Quædam loca*, he says, "certain parts."

dwelling. Later, he carved the woodwork of it into fantastic forms, an art which found its best development in certain parts of Germany and in the wooden churches and houses of Norway; and he adorned the inner walls with paintings and even with tapestry, — the latter an imported luxury. It is not unlikely that in the oldest times shield and spear and other weapons were hung upon the wall, with trophies of the raid and of the chase.

Whatever the primitive house, development was rapid; for war, and captivity, and service in Roman legions, put many a new notion under the Germanic helmet. Tricks of fortification were learnt from the imperial engineers; and it is quite certain that our Angles and Saxons made extensive use of the military improvements which Rome had given to her province. The "street" (*strata via*) and the "caster" (*castra*) were soon borrowed, thing and word; and in *Béowulf* we are told that the road which led up to Hrothgar's burg was "stone-variegated," — *stræt wæs stânfâh*, — paved in the Roman fashion; although it is plain that, as with stone in houses, so with these paved roads, the Germanic instinct regarded the process as something uncanny and savoring of those mysterious giants who long ago had rolled up the huge piles of masonry. So we read in *Andreas*: —¹

Manful they marched by mountain-dales,
stout of heart o'er the stony cliffs,
as far as ran the roads before them,
once built by giants, the burgs within,
stone-gay streets. . . .

¹ Wülker-Grein, *Bibliothek d. Ags. Poesie*, II. v. 1232 ff.

These roads are referred to the same source as certain pillars and statues of stone which are mentioned in the same poem, and are called by this stereotyped phrase, "old work of giants," — *eald enta geweorc*.¹

While wall and ditch were soon adopted for purposes of defence, the burg was often put upon a hill, or in some equally commanding place. In Anglo-Saxon poetry, the burg is called "lofty," "steep"; it stands on "the hoary stone."² A wall, of whatever material, soon encircled the place; *tân*, "town," is like German *zaun*, a fence or hedge; and in Anglo-Saxon the word *eodor*, "hedge or wall," soon passes into the general notion of house or fortified place; while in poetical speech the prince is called *eodor* of his subjects, their shelter. We have to distinguish between the "door" and the "gate," the latter being a most important strategic point, where the hottest struggle of a siege was mostly fought. The Anglo-Saxon Chronicle, in what Sweet calls "the oldest historical prose in any Teutonic language," gives us a vivid account of the siege of a king who is visiting at a house in Merton. It is set down for the year 755. The king has come to see a woman, and is with her in her bower (*bâr*), when an enemy of his, one Cyneheard, comes up with a besieging party, breaks through the "gate" and surrounds the bower itself. The king, aware of the danger, comes to the door, fights manfully and with success, until he spies his foe, the "ætheling," and so in sudden rage, rushes out upon him, away from the vantage-ground of the door. They all set upon the king and kill him.

¹ *Andreas*, 1495.

² Heyne, work quoted, p. 9; Vilmar, *Altert. im Hël*. p. 10.

Alarmed by cries of the woman, the king's thanes, who form his body-guard, come running up, — presumably from the hall, of which the bower was a dependency, — and vainly fight the besiegers, falling all of them about the dead body of their lord. Next morning the tables are turned; up ride the roused thanes and soldiers of the king; the late besiegers shut the gates, and are in turn besieged, stormed, and cut down, — all save one. It is easy to see that the English house of 755 has made considerable progress from the Germanic house described by Tacitus, for an active race does not stand still during six centuries, even to be photographed; and yet the dwelling preserves many of the old characteristics. The bower, detached from the hall, must have been fairly primitive; and very early, we may think, provision was made for the domestic animals. True, in the houses of ordinary men, as still in some peasant-dwellings of Europe, man and beast lived under one roof; but the home of chief or king must have been from the first independent of the domestic apartment and the stalls for cattle. In this case, we have to imagine the hall, with its sacred associations, its hearth and its fire, in the middle of a group of buildings;¹ nearest to it, and sometimes part of it, were the sleeping-rooms, then store-houses, bake-houses, barns, treasure-house. Such a group of houses, with a gradually increasing family to occupy them, lying in open country, and protected by a hedge or wall, was a *tûn* ("town") or a *hâm*; when it was a fortified place, high, a home of warriors, it was a *burg*. However, as Heyne re-

¹ The plural is often used in speaking of a single place: *on burgum*. See Heyne, p. 38.

marks, this distinction is not constant.¹ The *burg* might hold a single family or a whole city full; and *hâm*, *tân*, *burg*, and *byrig* are all used indiscriminately in the names of later English towns. With the rise of towns, we bid farewell to primitive Germanic relations, and note not only the use of older walls and roads, but imitation of Roman architecture. In this imitation, Anglo-Saxons were far more apt than their brothers on the Continent; though it must be conceded that with all his borrowings, the Englishman kept a certain independence; and while his language and his verse show material taken wholesale from classics or Romance, yet the heart of his speech, and the pulse of his poetry remained Germanic. There is, however, scarcely any material left to form a basis for our judgment in the matter of oldest English houses. Of the so-called Saxon architecture, very little has come down to us; and these meagre remains, says Lübke,² "remind one more of the carpenter than of the mason." Elaborate buildings, such as church or palace, were erected by workmen from abroad. How many of these foreign elements had crept into the Anglo-Saxon notion of a royal burg at the time when the materials of *Béowulf* were drifting together, or even how far the poet of that epic added his own ideas to the traditional account of Heorot, is a very difficult matter to determine; in any case, we must remember that the historical events of *Béowulf* are removed from the time

¹ Work quoted, p. 9. See also Kemble, *Saxons*, II. 550 ff. He gives a list of the towns mentioned in the *Chronicle*. Significant is the word *mægburh* as used to indicate the collective notion of a family, the clan in a narrow sense.

² In an essay on Gothic Architecture, in the *Zeits. f. Völkerpsychologie u.s.w.* II. 266.

of Tacitus by four hundred years, although the northern heathens would naturally preserve old traditions much longer than the converted border tribes. Let us assume that the burg itself, — the complex of buildings, — as described in *Béowulf*, is modernized; but why should not the hall be authentic? We will simply transcribe Heyne's account of the burg of Hrothgar, and then return to our study of the Germanic hall.

This burg, probably surrounded with a wall, is the home of the royal race of the Scyldings, or sons of Scyld; and here, with thane and thrall, with queen, children, relatives, and slaves, lives King Hrothgar. Chief of all the buildings is the hall; and near it is, of course, the bower of the queen, the *brýð-bûr*, where she and her children spend their time, whenever some particular occasion does not call her into the hall, to greet a guest at the banquet, or to bear the first beaker to her lord. "Hall and Bower" long remains an evident metonymy for Lord and Lady, — as in Wordsworth's famous sonnet.¹ To this bower, moreover, comes the king at night when he has closed the banquet in the hall: —

Then Hrothgar went with host of thanes,
 "shelter of Scyldings"² stept from hall,
 warrior mighty would Wealththeow seek,
 couch of his queen. . . .³

Scattered in the neighborhood of this bower, and thus submitted to the oversight of the mistress, lay those

¹ To Milton: —

"Altar, sword, and pen,
 Fireside, the heroic wealth of hall and bower. . . ."

² Kenning or metaphor for a prince.

³ *Béow.* 662 ff.

other domestic buildings for store and kine and cooking of food, which are below the dignity of epic mention. A special house, however, is named as affording accommodation for *Béowulf* and his companions. Finally, on a cliff overlooking the sea, is a sort of fortified watch-tower, whence the strand-ward and his men keep sentry over the ocean approaches and guard the burg from surprise of sudden raids. Such is the Germanic burg as painted in an epic of the seventh century; but it is difficult to shut our eyes to a certain touch of the mediæval castle in some of these arrangements, let the background be as primitive as one please: the "stone-gay" path from the sea to the palace, the courteous challenge of the strand-ward as *Béowulf*'s ship comes to shore, and the highly parliamentary answer of the chieftain,— these must be outward flourishes of the story, added by the monkish poet who was fain to let some bit of southern color fall upon this passing sombre legend of the north. If when, after the song of the minstrel in *Hrothgar*'s hall, —

The bench-joy brightened, bearers drew
*wine from wonder-vats. . .*¹

and the revellers thus forget their Germanic beer, we know that many other departures from the primitive order must be reckoned with in our epic.

Such beautifyings might be tolerated in the vaguer architecture and the unimportant details, but when it comes to the hall itself, the scene of that struggle between hero and monster which had doubtless formed the subject of more than one old ballad, here,

¹ *Béow.* 1161 f.

in a locality connected at every turn with tradition, we may expect the primitive arrangement.

The hall Heorot or "Hart," probably named so on account of the antlers which adorn its gables, differs from the usual centre and nucleus of a Germanic home, in that it lies outside the walls of the burg. The old hall had been within; but riches and power incline the king to build a new one, which shall outshine anything of the sort ever known to man; and since within the enclosure there is no room for such an edifice, it is built nearer the sea, and probably on lower ground. The material is wood; the general plan an oblong. Massive pieces of timber are held together by iron clamps, and rest, if we are to follow Heyne, upon a stone foundation. If so, these are modern touches. We are told that the floor was gleaming, bright, of variegated colors, —

On glittering floor the fiend then trod.¹

It would seem that there were two doors, one at each end of the building; and this is borne out by the often-quoted passage from Beda: "So seems to me, O king, man's life in this world compared with that which we do not know, as if you were sitting at meat among your thanes and nobles in the winter time, with a fire burning in the midst, and the hall full of warmth and light, but outside a raging storm of wind and snow, — and a sparrow should fly swiftly in by one door, and presently fly out again by the other. . . ." ²

¹ *Béow.* 725.

² *Hist. Ecc.* II. 13. A briefer and more spirited rendering is Green's in the *Shorter History of England*. Wordsworth has put the speech into verse, *Ecclesiastical Sonnets*, XVI.

The hall was entered on a level, or by a very few steps; for, as Heyne points out, the horses which are presented to Béowulf as a reward for his gallantry, are led directly into the hall; and we may add the later custom mentioned in an English ballad, where, by the way, the gift of an arm-ring has a decidedly ancient flavor: —

King Estmere he stabled his steede
 Soe fayre att the hall-bord;
 The froth that came from his brydle bitte
 Light in Kyng Bremor's beard.¹

Professor Child gives abundant references to older literature which support the custom, the most familiar being from the Squire's Tale: —

Whil that the kyng sit thus . . .
 In atte halle dore sodeynly
 Ther com a knight upon a steed of bras.²

Outside of the hall and along the wall, in which was the principal door, ran a row of benches; here sit Béowulf and his men until admitted to an audience with the king, and here they stack their "gray-tipped" spears. The roof and outer walls were probably painted in gay colors, a development of the art mentioned by Tacitus, and practised in the middle ages by the builder of a German castle.³ Our poem insists on the fact that Heorot "glistens," "shines far over the land": it is once called "gold-gay," and some have thought of a tile-roof in different colors, or even that the roof was plated with actual gold. But we need assume nothing more than the

² Aldine ed. Chaucer, II. 357.

³ Heyne, p. 44.

Germanic trick known to Tacitus. Huge antlers decked the gable. All burgs, it would seem, had such a decoration. Both the Anglo-Saxon author of *Andreas* and the Old Saxon poet of the *Héliand* speak even of the temple and houses of Jerusalem as furnished with these "horns." An Anglo-Saxon riddle¹ has such a horn for subject. A picture of an Anglo-Saxon house, reproduced in Wright's book² from a manuscript of the ninth century, shows the roof of a building which must be the "hall," adorned with a stag's head and antlers. The windows of the Germanic hall had, of course, no glass;³ they were high up in the wall, or even in the roof itself. In simpler halls the smoke of fires escaped as it could, through door or window; but there was often an opening in the roof directly over the fire, protected from rain by another and smaller roof above.

Within, the hall is supported by a single central pillar, which, as Henning tells us,⁴ is one of the oldest characteristics of the Aryan house. Such was the olive tree about which Odysseus fashioned his sleeping-room;⁵ such the huge oak in the hall of the Volsungs, into which Odin thrust the sword. For the king there is a special "High Seat," which in Heorot, Heyne thinks, was placed at this central pillar;⁶ in Scandinavian halls it was put on the

¹ No. 85 of the so-called Riddles of Cynewulf.

² *Domestic Manners*, etc., p. 15.

³ It was introduced in England, for church purposes, about 676. Heyne, p. 46.

⁴ *Das deutsche Haus*, p. 171.

⁵ *Odyssey*, XXIII. 190 ff.

⁶ Against this view, see Sarrazin, in his somewhat futile *Beowulf-studien*, p. 19. He claims *Béowulf* as a Scandinavian poem, and says Heorot is "plainly a Scandinavian tavern."

north side. A second seat or bench of distinction, probably opposite the throne, was meant for the prince and royal guests, like *Béowulf*. The High Seat had room for two persons besides the king,—the queen and his nephew; while at his feet, on a sort of dais, lay the *thyle*, a combination of master of the revels, orator, poet laureate, and jester. Inasmuch as the kin-system was the unit of Germanic life, the head of a house needed every conspicuous sign of authority; and this High Seat was no kingly symbol alone, but was used by each householder. It was probably found in all Germanic houses, no matter how rudimentary its grandeur; and it may still be seen in the cottages of Scandinavian peasants. On the death of a householder, the eldest son took possession of this seat with all pomp and ceremony, and dispensed the hospitalities of his house to relatives and friends. If he were chieftain or prince, he would thenceforth, sitting on this throne, called from such associations *gifstól*, or gift-seat, bestow on vassal or neighbor the ring which he twisted from its spiral, or some other piece of treasure, even the right to hold estates in land,—and so gladden the hearts of his retainers. Last stage of all, we find this gift-seat in the tomb. The Scandinavian sepulchre was sometimes built like a house, the freeman's final and permanent "hall," where he is now and then found sitting on the High Seat and ruling over his ghostly home.¹

About the other sides of the hall were tapestries, of course no primitive adornment, though not neces-

¹ Weinhold, *Altnord. Leben*, p. 498. See also the description of the tomb of Charlemagne.

sarily late in the history of Germanic decoration. In *Béowulf* they are called *web*:¹ —

. . . Gold-gay shone
webs along walls, wonders many
for sight of the heroes that stare at such.

The use of “weaving” in many figures of speech, — as “peace-weaver” for “wife,”² — together with the analogy of ornaments in dress, allows us the inference that rude tapestries may have ornamented the Germanic hall in comparatively early times. Under the tapestries, and adorned with carvings or even with gold, ran the benches of the retainers, the trusty vassals of the king, who drank his mead or ale, feasted and sang, and shared his treasures. These treasures were doubtless kept in the hall itself under a picked guard, or else were assigned to a fortified separate building.

Bearing in mind the date of our poem, but remembering as well the conservative nature of custom and of the traditions of social or family life, let us glance a moment at the picturesque scene which the poet of *Béowulf* shows us in Heorot.

Ranged along the walls are the benches filled with vassals, warriors old and young, — as the old English phrase ran, *duguð and geogoð*, — who drink from horn or cup, replenished by servants who hasten with vessels of ale about the room. On the throne sits the king, and at his feet lounges Hunferth the *thyle*. Béowulf is announced, and his peaceful message; the king bids his chamberlain go back, see that the

¹ *Béow.* 994 ff.

² See Bode, *Die Kenningar in der Ags. Dichtung*, p. 48.

weapons are stacked without, and usher in the guests. Leaving a small guard over spears and shields, Béo-wulf and his men, clad in their armor and helmets, enter the hall. Then Béo-wulf salutes the king, tells his name with a brave deed or two by way of credentials, and announces the purpose of his visit.¹

Then the warriors went as the way was showed them
under Heorot's roof; the hero stepped
hardy 'neath helm, till the hearth² he neared;
Béo-wulf spake — his breastplate shone,
war-net woven by wit of the smith: —
"Thou Hrothgar, Hail! Higelac's I,
his kinsman and follower; fame a plenty
have I gain'd in youth. This Grendel-deed
in my native land is known full well.
Seafarers say how stands this hall,
best of houses, for heroes now
empty and useless, when even-light
in the harbor³ of heaven is hidden away.
Then my retainers told me this, —
brave and wise, the best of men, —
that I, O King, should come to thee;
for my nerve and might they knew right well.
Themselves had seen me from slaughter come,
blood-fleck'd from foes, where five⁴ I bound,
wasted the giants: i' the waves I slew
nicors by night, in need and stress,

¹ This long extract from *Béowulf* is given not only for its illustration of the ways of a Germanic hall, but also on account of its allusions to other parts of our subject. The author is responsible for these, as for other translations from Anglo-Saxon which occur in the book.

² Reading *heorðe* for *heoðe*: see Holder, *Béowulf*, and others.

³ Reading *hador* for *heaðor* "receptaculum," with Grein (*Sprachs.* II. 40) and Heyne. Wülker-Grein, *Bibl.* and Holder read *hâdor* = "brightness." Grendel, the monster, came to plunder the hall every night, and killed any whom he found there.

⁴ Owing to discrepancy of this and the narrative below, Bugge would read "on the monster-sea" — the sea that breeds monsters. See Paul-Braune, *Beit.* XII. 367.

avenged the Weders¹ for woes they bore,
 crush'd the grim-ones. — Grendel now,
 monster direful, is mine to quell
 in single battle. — And so from thee,
 Prince of the Danes, I pray indeed,
 thou Scyldings' Bulwark, a single boon; —
 refuse it not, O thou Friend of Clans,
 Warriors' Shield,² now I've wandered far:
 that I alone with my liegemen here,
 a hardy band, may Heorot purge!
 More I hear, that the monster dire
 in his wanton mood no weapon recketh;
 hence shall I scorn — so Higelac bide,
 king of my people, kind to me! —
 brand or broad shield to bear in fight,
 no golden³ targe; but with grip alone
 must I front the fiend and fight for life,
 foe against foe. There faith be his
 in the doom of God whom death shall take!
 I ween that fain — if the fight he win —
 in battle-hall my band of Jutes
 will he eat unfearing, as oft before⁴
 the main of Hrethmen.⁵ — For me, then, needless
 to hide my head; ⁶ his shall I be,
 dyed in gore if death shall take me.
 The bloody booty he bears afar,
 ruthless devours it, the Roamer Lonely,

¹ *Sc.* the Weder-Géatas, Jutes (according to some, Swedes), the race to which Béowulf belongs.

² Notice the complimentary heaping of metaphors for the king's person.

³ Yellow; the color of the linden bast with which the shield was covered. (Heyne.)

⁴ *Sc.* "he ate." "Main" (A. S. *mægen*) = "chief power." "Goes it against the main of Poland, sir?" *Hamlet*, IV. 4.

⁵ Danes, the men of Hrothgar whom Grendel has previously destroyed.

⁶ These words are interpreted by some (see Heyne's note in his 5th ed.) to mean: "I ask thee to give me no guard of honor this night; I will meet the foe alone." Others refer it to burial; "Grendel will devour me, and hence I shall need no grave."

marking the moorlands :¹ no more thou need'st
 for food of my body further care.
 To Higelac send, if Hild² shall take me,
 noblest war-weeds warding my breast,
 fairest armor, heirloom of Hrethel,
 and work of Wayland³ . . . fares Wyrð⁴ as she must." —
 Hrothgar spake, Helmet of Scyldings : —
 "For fight defensive, friend my Beowulf,
 for sake of helping, hast sought us here.
 Fought thy father⁵ a feud unequalled ;
 Heatholaf with his hand he slew
 among the Wylfings ; Weder kin
 failed to hold him for fear of the host.
 Thence he sought the South-Dane folk,
 over wallowing waters the well-thewed Scyldings,
 when first I was wielding folk of the Danes,
 youthful ruled o'er the rich in gems,
 hoard-burg of heroes. Was Heregar dead,
 my elder brother had breathed his last,
 Healfdene's bairn : he was better than I.
 Then the feud with fee I settled,⁶
 to the Wylfings sent o'er the water-ridges
 treasures olden : oaths he swore me.
 Sore is my soul to say to any
 of the race of men what ruth for me

¹ *Sc.* with blood.

² Battle, death in battle personified.

³ Wayland Smith. Weland was the Germanic Vulcan, of whom more under the head of Industries ; his legend is well known in all Germanic poetry, and is referred to in our oldest English lyric, *The Consolations of the Minstrel Deor*.

⁴ This whole passage, stamped with primitive Germanic marks, is replete with mythologic interest, though the elegiac and mournful tone is specifically Anglo-Saxon. *Wyrð* (= that which is accomplished) is Fate, a Germanic goddess ; compare "To dree one's weird."

⁵ Hrothgar at once shows his knowledge of royal histories and genealogies, a great point with the Germanic chieftains. In the Hildebrand Lay, old Master Hildebrand, when he unwittingly meets his son, and asks the name of his opponent's father, says proudly : "If thou namest one to me, I shall know the rest ; boy, in the kingdom all folk are known to me!"

⁶ By paying the *Wergild*. See p. 178.

in Heorot Grendel with hate hath wrought,
 what sudden harrings. Hall-folk¹ here,
 my warriors wane; Wyrd hath swept them
 into Grendel's terror: God is able
 the deadly foe from his deeds to turn.
 Full often boasted the beer-drunk earls,
 over the ale-cup, arméd men,
 that they would bide in the beer-hall here
 Grendel's onset, with edgéd terrors.²
 Then was the mead-hall at morning-tide
 dyed with gore when daylight broke,
 all of the benches blood-besprinkled,
 with gore of the sword: I had guards the less,
 darling clansmen, whom death had seized."

With these speeches, the king and his noble guest
 have put themselves on the proper terms, and Hroth-
 gar proceeds to bid a feast.

"Sit now to banquet, unbind from restraint
 victor-heroes as heart shall prompt thee."³
 There for the joinéd Jutish band,
 in banquet-room was a bench assigned,
 whither the warriors went to sit,
 lofty-thoughted.⁴ A thane attended,
 who carried in hand the carven ale-cup,
 clear mead poured out; oft minstrel sang,
 cheerly in Heorot; heroes revelled,
 warriors many, Weder and Dane.

The songs sung to harp or zither⁵ by such a min-
 strel were sometimes, it is true, gnomic verses full of

¹ Vassals, retainers; those who dwelt in the hall.

² Would await him with drawn swords.

³ Evident parallel of our "Make yourselves at home." Other inter-
 pretations in Heyne's note, 5th ed.

⁴ Men who thought of noble deeds; bold-hearted.

⁵ Symons, in Paul, *Grdr. d. germ. Phil.* II. 1, p. 7.

proverbial wisdom,¹ but mostly, as befitted a warrior throng, ballads of heroic or mythic acts done by members or ancestors of the clan; or else — for the family stock of songs would easily grow too familiar — some legend of other Germanic tribes would be eagerly greeted, like the song sung by one of these minstrels attached to Hrothgar's court as the men are riding up to the hall, after the combat of *Béowulf* and *Grendel*.² Personal compliment would have its

¹ Such are, in late guise, the gnomic verses preserved in Anglo-Saxon poetry; this proverbial poetry was very popular, and it is easy to justify the ways of Tupper by the practice of our ancestors.

² Very few words will be in place concerning the nature of Germanic poetry. Its chief fault is lack of artistic finish; it has "more matter and less art" than the poetry with which we are familiar. Its development in respect of form and style was rudely checked by the conversion, and never came to maturity. I have elsewhere made bold to apply to this early poetry of ours those infinitely pathetic words of Goethe's *Mignon*: —

Vor Kummer altert' ich zu frühe.

Sorrow made it old before its time. But for the facts. Of course, the material is human speech, and many words used in poetry were used in daily life. Substantives, not verbs, are the chief consideration. A certain number of words, however, constituted by their solemn and formal nature an exclusively poetical vocabulary, and these joined with certain artistic factors to make up our old poetry. Rhythm is the chief of these factors; tone-color, the second; parallelism of phrase is a third. Sievers has shown a far greater regularity in Germanic rhythm than was suspected by older scholars. With certain subordinate regulations of quantity and balance, the main law of our old poetry called for a verse which fell into halves, — in each half two accented syllables. These verse-accented syllables must also be word-accented; in other phrase, the rhythmic accent coincided with the syntactical or logical, — the distinguishing element of all Germanic poetry. Scherer says that this desire to force home the root-syllables, the sounds which bore the sense, was due to the passionately earnest character of the race. To bind together the two halves of the verse, tone-color was employed, — what we call alliteration or beginning-rhyme. The first accented syllable of the second half was standard; with the initial sound of this syllable must rhyme one, and might rhyme both, of the accented syl-

place. On this occasion in question, we may fancy that some deed of Béowulf, or of a member of his kin, was sung amid the enthusiasm of the warriors and their guests, with shouts of applause and remembered delight of battle, with copious flowings of the ale. But Béowulf has another proof to endure. The *thyle*, or king's master of the revels, is not at his post in vain; and the guest is to be put to his mettle in one of those flytings, or contests of wit, which seem to have been so popular, especially among the Scandinavians. Lolling at his chieftain's feet, heated with liberal potations, the *thyle*, Hunferth, jealous and vexed, tries to jeer and scoff the guest out of countenance; and so he calls across to the bench where Béowulf sits: —

Hunferth spake, son of Ecglafe,
 who sat at the feet of the Scyldings' lord,
 unbound the battle-runes: ¹ Beowulf's quest, —
 haughty seafarer's, — him had galled,
 for he always grudged that another man
 more of fame in this middle earth
 should win under heaven than he himself. —
 “ Art thou that Beowulf, Breca's rival,
 who in swimming strove on the spacious main,
 when ye in your pride must prove the sea,
 and for wantonness i' the waters deep
 ventured your lives? No living man,

lables of the first half. In good verse, the two accented syllables of the second half never rhymed with each other. This peculiarity of the verse we have sought to retain in translation, as well as the parallelisms, in which Anglo-Saxon poetry bears some resemblance to the Hebrew. The use of alliteration is shown in the host of phrases like “ have and hold ” retained by our once poetical, now prosaic laws. For list in Anglo-Saxon, see Meyer, *Altgerm. Poesie*, p. 260 ff.

¹ “ Set loose the secrets of battle,” *i.e.* began to quarrel.

nor lief nor loath, from your labor dire
 could you dissuade. O'er the sea ye rowed,
 ocean tides with arms ye covered,
 measured the sea-streets, strove with hands,
 glode o'er the waters. Winter's flood
 rolled high in billows; in realm of sea,
 a sennight toiled ye: he topped thee in swimming,
 had more of main! Him at morning-tide
 to Heathoræme kin the current bore,
 whence he hied to his home so lief, —
 beloved of his liegemen, — land of Brondings,
 stronghold fair, where folk he had,
 burg and treasure. His boast o'er thee
 the son of Beanstan soothly wrought.
 Now ween I for thee a worse adventure, —
 though in rush of battle thou brave hast been, —
 struggle grim, if Grendel here
 thou darest to wait this one night through."

Beowulf spake, bairn of Ecgtheow. —
 "What a deal hast babbled, dear my Hunferth,
 drunken with beer, of Breca now,
 fabled his faring! In faith, I say
 that I have more of might at sea
 than any one else, — of ocean-toil!
 We twain once said, — we were scarcely boys, —
 and made a boast, — though both as yet
 youthful in age, — that on ocean far
 we would dare our lives: and we did it so.
 A naked sword, as we swam o'er ocean,
 we held in hand, hoping to guard us
 against the whales. Not a whit from me
 could he faster float o'er the flood away,
 more fleet on the waters: I would not leave him.
 Then we together i' the waves abode
 for five nights' space till the sea-flood twinn'd us,
 rolling billows, rawest weather,
 darkling night and northern winds
 battle-grim rushed on us: rough were the waves.
 The wrath of the sea-fish rose apace:

me 'gainst monsters the mail of my body,
 hard, hand-linkéd, lent me aid ;
 on my breast was the battle-sark braided well,
 fretted with gold : then grasped me hard
 and haled me to bottom the hostile fiend,
 grim in his gripe. 'Twas given me, though,
 to pierce the monster with point of sword,
 with battle-blade. Huge beast of the sea
 was hent with a thrust of hand of mine.
 Me thus often the murderous foes
 sorely pressed : I served them well
 with my darling sword, as due and right.
 Not at all did their booty bring them joy,
 these evil-doers, to eat me there,
 seated to banquet at bottom of sea ;
 but at break of day, by the brand destroyed,
 on the marge of ocean up they lay
 put to sleep by the sword ; and since, no more
 in the foaming sea-ways sailor folk
 are let in their faring. — Light from east
 came God's bright beacon (the billows lessened)
 so that I saw the sea-cliffs high,
 windy walls : oft Wyrð preserveth
 undooméd earl if he doughty be.
 Sooth it befell me with sword to kill
 nine of the nicors. — By night ne'er heard I
 of harder struggle 'neath heaven's dome,
 nor on wave of the waters wearier man.
 Yet I came with life from the clutch of foes,
 worn with my wandering. Waves upbore me,
 flood over ocean to Finnas' land,
 welling waters. No wise of thee
 have I heard men tell such terror of falchions,
 bitter battle. Breca never,
 nor thou nor he, in the hot war-play
 such daring deed had done at all,
 with bloody swords (I boast not of it),
 though thou the bane¹ of thy brothers wast,

¹ Murderer.

the chief of thy kin, — whence curse of hell
awaits thee, good as thy wit may be!
For I say¹ in sooth, thou son of Ecglaf,
ne'er Grendel such heap of horrors had wrought, —
monster dire, — on thy master here,
in Heorot such havoc, if heart of thine
were as battle-bold as thy boast is loud!
But he has found, no feud will come,
no deadly raid, from Danish people,
fears no fray from the folk of Scylding.
He forces pledges, favors none
of all your race, but he revels on,
slumbers and feasts, no feud expects
among the Spear-Danes. — Straightway now
shall I the prowess and power of the Jutes
bid him in battle. — Blithe to mead
go he that listeth when light of morn
o'er sons of men on the second day,
sun robed in ether, from south shall beam!"²
Blithe then grew the breaker of rings,
hoary and battle-brave;³ help he waited,
in Beowulf's boast, the Bright-Danes' lord,
Shepherd of Clans, heard strong resolve. —
Then was laughter of liegemen loud resounding,
words were winsome. Came Wealhtheow forth,
queen of Hrothgar heedful of courtesy,
gold-decked greeted guests in hall.
Then the high-born lady handed a cup
first to the lord of the land of Danes,
bade him be blithe at the beer-drinking,
to his clansmen gentle. In joy he took
beaker and banquet, the battle-graced king.
Through the hall then went the Helmings' lady,
on younger and older everywhere
treasure bestowed, till the time had come

¹ Note how *Béowulf's* invective leads up through murder to the climax of Germanic sins, — cowardice.

² That is, "the hall will be safe after to-night's combat."

³ King Hrothgar.

when the gold-decked queen, in gracious fashion,
to Beowulf bore the beaker of mead.

She greeted the Jutes' lord, God she thanked,
in wisdom's words that her will was wrought,
at last on a hero could lean her hope,
comfort of terrors. He took the cup,
warrior bold, from Wealhtheow;
speech then uttered the stout in battle,
Beowulf spake, bairn of Ecgtheow. —

“This was my thought, when my thanes and I
took to the ocean, entered our boat,
that I would work the will of your people
in thorough fashion or fall in death
in fiend's gripe fast. I am fain to do
deed of the doughty, or day supreme¹
of this life of mine in the mead-hall bide!”

Well the words to the woman seemed,
boast of the Jute; with jewels laden,
the lady bright by her lord sat down.
Then rose as erst the revel in hall,
proud words spoken, the people glad,
shout of victors, — till suddenly
the lord of the Healfdenes listed well
to find his rest. For the fiend, he knew,
in the banquet-hall was battle prepared.

In other words, they remember that it is night-time
now, and the monster must shortly make appearance.
So the Danes leave the hall to Béowulf and his
Jutes.

. . . The band arose;
eagerly greeted one the other,
Hrothgar to Beowulf, hail he bade him,
power in the wine-hall, — these words he added:
“To never a hero my hall I've trusted,
since first I could heave up hand and shield,
my noble hall, save now to thee.

¹ Last.

Have now and hold¹ this house so lordly,
have mind on thy glory, thy main declare,
watch for the foe. — No wish shall fail thee,
if thou bidest the battle with bold-won life!"²

Then they go, and anon the great struggle takes place; the hall totters with the conflict between *Béowulf* and *Grendel* and would have fallen, had it not been so extraordinarily well built. The extract we have just considered is somewhat tedious, and exaggerates certain grave and obvious defects in the style of Anglo-Saxon poetry; yet the quality tiresome to us was welcomed by the Germans, who had a childish delight in repetition and detail; and the defects are inherent with poets that have not attained the self-control of the artist. This breathless huddling style was dear to the brawny old warriors. Again, where monkish learning has touched our verses, it has not adorned. They are in many parts tinged with Roman culture, and venerated with a thin coating of the new religion; the speech of *Béowulf* is too parliamentary for the temper of those earliest Germans; and perhaps the queen is something too much of a *grande dame*. But making all these allowances, we are safe in looking on this description as essentially Germanic; nor can a tolerably critical eye fail to detect and leave out of account the touches of a more modern brush.

The chief business of the hall was evidently such as we have seen,—royal receptions and banquets,

¹ The antiquity of this legal form is proved by the alliteration, as well as by its solemn use in this place.

² The passage is given in full except a few lines near the end, and runs in the original from v. 402 to v. 661.

the latter being, of course, the more constant factor. In these revels, men had cup or horn to hold in the hand, — “without tables!”¹ says a plaintive German commentator. We have spoken of horn and cup already;² but we must not forget the old blood-curdling habit, which has done service for so many orators and editors, of drinking from the skulls of slaughtered enemies. This custom was primitive and Germanic; Livy tells us the same thing of the Celts.³ Nor was it necessarily the skull of an enemy; one could pay this graceful compliment to a dead friend, and murmur, “Alas, poor Yorick!” with even a nearer sentiment. Grimm cites many instances.⁴ We know that Alboin met his death because “when he had sat too long one day at a banquet in Verona, with the beaker before him which he once had caused to be made from the skull of his father-in-law, King Cunimund, what must he do but send wine to the queen and bid her drink merrily along with her father. Let no one” — adds the good Paul — “let no one call this impossible; I speak the truth in Christ, and I myself have seen this beaker.”⁵ And in another place the same writer says: “Alboin slew Cunimund, cut his head off, and had a beaker made of it. This sort of beaker is called *skala* among them; in Latin, *patena*.” Older than history is the myth of Wayland, best told in the Norse *Vilkinasaga*.⁶ Völundr, as

¹ Tacitus says these were used at the Germanic meal: “Sua cuique mensa.” *Germ.* XXII.

² Many names occur in the Germanic languages to express “drinking-cup.” See Vilmar, *Deutsche Altertümer im Heliand*, p. 37.

³ Hehn, 438; Livy, XXIII. 24.

⁴ *G. D. S.* 100.

⁶ P. E. Müller, *Sagabibliothek*, II. 157.

his Norse name runs, treats in a fashion similar to Alboin's the bones of a king's two sons.

In *Béowulf* little was said about the particulars of the feast; in *Judith*, a late epic on a Christian subject, a banquet is described quite in the Germanic fashion, even if it is the doing of no less a person than Holofernes. He orders a great feast and bids to it "the eldest of his thanes," — the highest in rank and service.

Then fared they thither at feast to sit,
 proud to the wine, his wicked fellows,
 bold mailed-warriors. Beakers tall
 were borne to the benches, bowls and flagons
 were filled for the floor-sitters: fey they took them,
 warriors stout, though he wist no thing,
 dread leader of earls. Then Olofernes,
 gold-friend of men, was glad with wine,
 laughed and was loud in larum and din,
 so that many a mortal marked afar
 how the sturdy-minded one stormed and yelled,
 mead-mad and haughty; admonished oft
 the crowd of benchers to quit them well.
 So the worker of evil all day long
 drenched his warriors deep in wine,
 stout treasure-breaker, until they swooned,
 plied his thanes till prone they lay,
 drenched them all as if death had seized them,
 drained of life. . . .

This is Germanic through and through, — the "larum and din" agreeing with accounts given us by classic writers of the clamor and "wassail" cries of a Gothic banquet,¹ — as indeed any one may see by comparing the biblical account; and it is much more strongly

¹ In the fifth century the Alamanni had the fame of being the hardest of German drinkers. Salvianus, quoted by Hodgkin, *Italy*, I. 310.

and sharply outlined than the too shadowy description in *Béowulf*. This cheerful defiance of all local coloring is a saving virtue in the early English poets, and helps us to many a trait of their own time which they would have scorned to record of purpose. The old Saxon poet who paraphrased the gospels describes, much in the same fashion as above, the feast of Herod, and also — though naturally as a far more decorous affair — the banquet at Cana.¹ People gather in the “guest hall” of the “high house”; they grow “blithe”; while the servants “go about with bowls and cups and pitchers,” till “on the floor” — that is, in the hall — “was fair pleasure of earls,” and from the benches rose delight of the people. The technical term among the oldest English poets to describe this bliss of revel was “dream,”² — the joy that springs from drink, and song, and laughter in the warm hall, shared with one’s household and vassals; then it came to mean a similar state in one’s sleep, which is the only meaning now attached to the word. Song, noise, — that was the Anglo-Saxon notion, as witness the three remarkable glosses:³ “*Concentus, i. adunationes multarum vocum, efenhleopung, vel dream. — Furor enim animi cito finitur, vel gravius est quam ira, reþnes, woden, dream. — Armonia [= Harmonia], dream.*” A “dreamer” is a musician. However, the Germanic warrior could enjoy in hall both the ancient and the modern dream; for, save when a Grendel made the hall-night hideous, it was there, stretched on his bench, or on a rude sort of

bed, that the clansman slept; and Tacitus tells us that it was often well into the following day when our dreamer rose,¹ took his bath — hot, if possible, — and went off to the duties of the morning. It might be that another feast claimed his attention, some public affair, as when a youth was graced with spear and shield in presence of the clan, and so became a freeman, a warrior, and a pillar of the state. It might be a town meeting, or some other function of the citizen; but it was certainly no manual labor, no care of farm or cattle. That was not the warrior's business. He would often, says Tacitus, lie whole days before the fire; and if we ask what he was doing there when not asleep, we are entitled to the suspicion that he was gambling. This was his vice of vices; the national propensity to gamble was not a mere pastime, but a reckless, absorbing, passionate gambling, which often ended not only in poverty, but in slavery. When property was gone, when wife and child were gone, the German staked his own liberty; and if he lost his last throw, went voluntarily into servitude, even under a weaker man.² This is an old Aryan trick. Dice are actually prayed to in the Vedas; and dice remained prime favorite with Germans throughout the middle ages, even among women.³ A more innocent game, resembling our draughts or checkers, was known to the Germans perhaps as early as the fourth century; and the materials of the game, "bone, glass, amber, or earthenware," are found in Scandinavian tombs, which date from the early iron age.⁴

¹ *Germ.* XXII.

² *Germ.* XXIV.

³ See also Weinhold, *Deutsche Frauen*,² I. 113.

⁴ Montelius, work quoted, p. 113.

Of course, the Germans hunted. Cæsar says it was an amusement in which they took delight, a very reasonable statement. What more natural than for this giant to rise from his lolling by the fire, like any man of muscle, sick at last of inactivity and sloth, to shake his invincible locks and course the woods for bear or boar or stag? Unfortunately, Tacitus and the *Germania* tell another story, and say that Germans do not spend much time in the chase. Holtzmann and certain English editors, with heroic remedy, simply strike out the negative, and so square Tacitus with Cæsar and with common sense. We know that the latter mentions game as part of the German larder; and since, moreover, your hunting is a war in little, we have reason to think of our forefathers as mighty hunters before their gods. How else shall we account historically for the English squire and the game-laws? Still, we must go cautiously in these assumptions. Jacob Grimm saw even in falconry an old Germanic sport, and dedicates to it a chapter¹ of his *Geschichte der deutschen Sprache*; but Hehn's opposition to such a view seems based on very solid facts.² All the refinements of the chase, he contends, are of Celtic origin, whence even the Romans borrowed more than one improvement. Nevertheless, we feel sure that the German, though careless of terms and methods, had plenty of plain, honest hunting,—wolf, bison, elk, bear, and boar. Something of the old spirit must assert itself in that merry scene of the Nibelungen Lay, which with conscious or unconscious art finely increases the horror of the tragedy that follows so

¹ Cap. IV.

² Work quoted, p. 305.

hard upon its heels.¹ We hear the horn winding clearly through the forest, the bay of hounds on all sides, four and twenty packs yelling after the game in as many directions, Siegfried laughing, joking, killing whatever is met, and at last in sheer sport catching a huge bear alive and binding it to his saddle; he carries it to camp, where he lets it loose to dash through the kitchen, scare the cooks and upset half the food among the ashes; and then, as the beast escapes all pursuit, and makes for the forest, we see Siegfried once more in pursuit, killing it and bringing it to the fires. It seems imbedded in our race and no importation, even from the Celt, — this broad-hearted joy in following the deer, this delight of hounds and horn, which ring out so bravely in English as well as German song, and which can still drive a London fop into prairie or jungle that he may find “something to kill.” What race speaks in Shakspeare’s Theseus? —

And since we have the vaward of the day,
 My love shall hear the music of my hounds.
 Uncouple in the western valley. . . .
 . . . My hounds are bred out of the Spartan kind,
 So flew’d, so sanded; and their heads are hung
 With ears that sweep away the morning dew;
 Crook-knee’d and dew-lapped like Thessalian bulls;
 Slow in pursuit, but match’d in mouth like bells,
 Each under each. A cry more tuneable
 Was never holla’d to, nor cheer’d with horn
 In Crete, in Sparta, nor in Thessaly. . . .

It is not without full purpose that these scenes and doings of such a late period have been thrown in with extracts from the *Germania* and quotations from

¹ XVI Aventure, *wie Sifrit erlagen wart.*

Béowulf. It is probably true, or nearly true, when Justus Möser calls modern peasant life in Germany a fair copy of the primitive condition of the race; but we must make the important concession that parallel scenes may be rendered really different by a difference in the persons. Charlemagne doubtless lived in the midst of discomforts that would not now be tolerated by an Irish navy; but, aside from the absurdity of comparing the persons, not a detail in the surroundings of one can be fairly appealed to for a picture of the surroundings of the other, unless we constantly insist upon this nobler element of personal character, and the relative nature of civilization. To do this, there is evident help in any bit of epic which preserves Germanic elements in comparative purity. With such caution, we may finish our consideration of the Germanic house by bringing it into contrast with modern homes. How little of our modern home was represented in the old German dwelling is readily seen when we examine familiar names like *tile, wall, street, mortar, tower, pillar, chamber*, and many others.¹ The primitive Germanic house took different forms in plan and detail, which may be studied in Henning's monograph.² This author thinks that the Saxon peasant-house is developed directly from the old Germanic dwelling; and here we see a combined stable and house, entered through a door large enough to admit a wagon. Right and left of the entrance are stalls for cattle and horses. Passing by these, we come upon the *flet*, — the living-room, — answering to

¹ Hehn, p. 115. All are foreign derivatives.

² See especially 29 ff., 56 ff., 136 ff. The Germanic hall is described 153 ff.

the primitive hall, whose occupants our Anglo-Saxon epic called *fletsittende*. Here is the low hearth, altar-like, by the further wall, but once in the middle of the room, and centre of the house in every way. It was an old custom for bride and groom, on entering their new home, to march thrice *around* the fire.¹ On one side of this hearth are table and bench; on the other, a washing-place, open, with water from the outside; and immediately adjoining the stalls was a rude platform on which stood the beds of the family, and where the mistress of the house could sit and spin, while she overlooked all the house,—man, maid, and cattle. Equally interesting is the diverging plan of dwelling found upon the Cimbric peninsula near the home of our own ancestors.² In all these houses, for the most ancient times, we may assume dead as well as living tenants; the German peasant was once buried in the house where he was born.

Henning makes it probable that this old Germanic house was not very different from that of primitive Italians and Greeks. All go back to a common Aryan type. The word “hall,” like the thing, is original; it means that which protects or conceals. “Timber,” as we have seen, is Latin *domus*, the building itself. “Thatch,” “door,” are both original words. It seems probable that the primitive Germanic dwelling was an heirloom of Aryan days, and that the simple art of building house and home was learnt before the great exodus from the birthplace of that clan of destiny.

It seems reasonable to assume that his house at least was felt by the primitive German to be his own.

¹ See Simrock, *Mythologie*, p. 600.

² Henning, p. 48 ff.

“Own” is a very old Germanic word — and fact.¹ Besides his house, what did the freeman own? In the matter of land, to be sure, we have rival theories, individual ownership and the communistic plan; but however that may be, the man who tilled land owned it while he tilled it, and owned what he raised upon it. The old German distinguished between real and personal estate; the latter consisting in weapons, dress, ornaments, utensils, hunted game, cattle, slaves, and even the house itself;—for could not this be carried about from place to place? Of other kinds of property we could find curious examples gathered from old laws; but we shall notice only the property in trees of the forest. In his treatise upon *Haus- und Hofmarken*,² the signs or marks made on houses or other property, Homeyer shows that proprietary marks were put on trees, tame stags, cattle, clothes, and what not. The *Lex Salica*, for example, provides that a man may mark a tree for felling, and no one else is to touch it for the space of one year; after that it becomes again public property. The property in bees who hived in a particular tree has been already noticed.—In fine, we may be sure that our ancestors were not in that delightful condition of certain African tribes where nobody owns anything and everybody steals what he can.

CHAPTER V

HUSBAND AND WIFE

The husband a warrior, the wife housekeeper and farmer — Rights of women — Germanic chastity — Woman as sibyl — Her courage — Wooing and wedding — How far love was a factor — Dower or price — Ceremony of marriage — Punishment for infidelity.

LET us come closer to the family life of our forefathers. ✕The free German was essentially a warrior, and such farming as he had was in the hands of his wife, who was helped by slaves and the weaker members of the household. ✕ To look after the cattle and the horses was work for the freeman so long as nomadic habits prevailed; but he had no taste for grubbing and raking and gathering of crops. ✕ To steal cattle — provided the theft was open, there was no disgrace in it, ✕ — smacked of war; just as the moss-troopers and raiders of the Scottish border in very late times were not by any means without allies of gentle blood. Meanwhile, farming slipped into Germanic life under feminine escort, and began very modestly indeed. The primitive German wife, says Lippert,² “span wool, made clothes, cared for the fowls, and — tried her hand

¹ Grimm, *R. A.* 634.

² *Religion d. europ. Culturvölker*, p. 36.

at raising barley.”¹ In other respects her position in the state was pitiable enough; and Wackernagel reminds us² that, if we may believe Gregory of Tours, the Franks once held serious debate in one of their church assemblies whether or not a woman was a human being. Yet this importance in the household and in the farm gave her a certain responsibility, leadership, and dignity. We must remember, too, what an important part the German woman played in matters of divination and religion; add to the power of the wise woman, like Veleda, the chastity for which Tacitus so warmly praises the German wife, and we can imagine that this was no race of sheer barbarians. Suetonius³ lauds the insight of Augustus, who saw how much stress Germans laid upon noble women as hostages, caring little for men; and so Rome began to demand this new sort of pledge from the barbarians. But we must not let sentiment run away with us; and the famous eulogy will bear a bit of investigation. No part of the *Germania* is so much admired as this; and it is the fashion to accept it as a sort of conspiracy before the fact with Goethe’s *Ewigweibliche*, — in some respects, not without reason. Women, even in those days, were not deprived of legal protection. Legal and statutory exclusion from certain privileges is a proof that other rights exist and are guaranteed by custom; thus we find the Salic Law, “oldest of Teutonic codes,”⁴ fixing cer-

¹ Barley had for the German three distinct merits: it grew quickly, needed little care, and furnished an intoxicating drink.

² *Kl. Schr.* I. 3.

³ See also *Urzeit (Deutsche Vorzeit, I.)*, p. 319.

⁴ It dates from the fifth century.

tain principles of female inheritance, particularly that women may not inherit land. Of course, as is now well known, nothing is said about succession to a throne. From ownership of land woman was probably excluded in all Germanic tribes, and this Salic Law represents the general point of view.¹ Where we find daughters admitted to equal shares of an estate with sons, as among the Visigoths, we may assume foreign influence. ✕Moreover, women were not members of the state, but were under control of father or brother, who punished or rewarded them at pleasure. ✕The oldest English law is full of this doctrine.² Refractory wife or daughter, where stripes are unavailing, is sold or even given away. We shall presently see that the Tacitean account of the punishment meted out by German custom to an adulteress agrees exactly with this view of a woman's position in the state. But custom is law; and custom had very early begun to give woman a certain legal standing. This process probably began in the rights of inheritance; a runic inscription of ancient Norway, highly important both for its age and for its length, speaks "of the male heirs" (*arbinga*) and "of the female heirs" (*arbingano*). Thus, in the absolutely heathen and purely Germanic north, we have as early as the year 550 a definite word, corresponding to a definite fact, and recognizing the rights of female inheritance.³ Traditional equity gave the daughters ornaments and certain articles of furniture; the rest

¹ "De terra Salica nulla portio hereditatis mulieri veniat." Lex Sal. 62, 6 apud Grimm, *R. A.* 407.

² Details in *R. A.* 738.

³ Stone at Tune in Norway. See Noreen's *Altisländ. und Altnorw. Grammatik*, p. 189 f., and references there given.

of the property followed the male line. Not without importance is the hint of Tacitus that among the Germans of his day traces still lingered of a primitive law which gave all property to the sons, but only in the female line. He says ¹ that a sister's sons stand with the uncle as high as with the father; "some even think this tie of blood to be holier and closer, and they have regard to it in the choice of hostages. . . . Still, the heirs are always the children, and wills are unknown." Now by the old notion of maternal inheritance,² a man "would part more readily from his wife's child than from his sister's child; for in his eyes there was more blood-relationship with the latter."³ The Germans of Tacitus had long passed this point of view, and had developed a high sense of the paternal relationship; but survivals occurred like the above, and gave a certain support to the position of woman. In slave-law the old rule held, — *partus sequitur ventrem*, the offspring belonged with the mother; but even in this respect the ancient laws show considerable divergence. Proof of woman's position is helped, as has been already remarked, by a study of Germanic myths. If the ways of gods and goddesses reflect earthly existence, — and we are sure they do, — the worship of a Nerthus seems impossible for a community which gave no rights and paid no respect to women. When Tacitus tells us of a tribe of Germans in the north "which is ruled by a woman,"⁴ we may, it is true, call this a fable, like the other won-

¹ *Germ.* XX.

² Obviously, in communities without settled married relations, maternal inheritance is the only certain method.

³ Lippert, *Rel. d. eur. Culturv.* p. 60.

⁴ *Germ.* XLV.

ders which his artistic instinct marshalled at the end of his book and on the border of the frozen world, and we may ascribe it to the misunderstanding of a Finnish word; but for all the fable, there may be something in the legend beyond what meets the ear of the etymologist. We know that the lady of Mercia was no fiction; as Warton¹ says, "ladies in England were anciently sheriffs of counties!" And lastly, let the grave itself bear witness. Antiquaries in Scandinavia refer to 1000 B.C. the body of a woman found buried in a tree-coffin, with a dagger by her side. Montelius, perhaps with too much credulity, calls this and similar finds "a remarkable intimation of Amazons during the bronze age in the north."²

It is popularly supposed that women were lifted to their present place mainly by the influence of the church and of chivalry. This is in great measure true. In the eighth century, — say a hundred years after the conversion, — nuns in England take active part in literature. They correspond with monks and bishops in Germany; and one of them, living in German cloisters, writes the life of her brothers, the missionaries Willibald and Winnibald.³ This Walburga, however, is outdone by a nun of the tenth century, Hrotsvith of Gandersheim, the famous mediæval blue-stocking. She wrote legends and history in Latin verse, and actually made the first attempts at dramatic composition, of which we have any record,

¹ *History of English Poetry*, II. 186.

² Work quoted, p. 62.

³ See also Wattenbach, *Deutschlands Geschichtsquellen im Mittelalter*,² p. 97.

since the downfall of classical culture.¹ Now there must have been some basis for this in the old life. From the start, if we may believe Wackernagel,² knowledge of writing was largely in the hands of women; in Scandinavia women seem to know most about the making and reading of runes. The sibyl was very potent in Germany, and, as we shall presently see, united to her knowledge of divination and mystic signs a certain majesty and sanctity that must have helped her sisters in more ways than one.

Again, the care of the house and farm, onerous as it might be, gave dignity to the mother and wife. In higher walks of life she shares her husband's state, — witness Wealhtheow in *Béowulf*. We find the daughter of Hrothgar performing offices like those of the queen; Freawaru also goes through the hall, bears the ale-cup to thirsty warriors, bestows treasure and greets the guests.³ The purity of German family life was eagerly held up by Tacitus as a lesson for his countrymen. Cæsar had already praised this feature, and it became a by-word with the later chroniclers. A writer of the fifth century⁴ says that the Germans are all chaste, except the Huns and Alans, — an exception which does not affect the statement. In Rome, family relations were going from bad to worse; and Tacitus, eager to teach his countrymen that strength in man or state depends on purity, painted too bright a picture. It has the pink-and-white unreality of a Dresden-china group. In some respects it reminds us of Cooper's

¹ Ebert, *Lit. d. Mittelalters*, III. 286, 314 ff., gives a full description of her personality and her work.

² *Kl. Schr.* I. 14, note.

³ *Béow.* 2020 ff.

⁴ Salvianus, quoted by Hodgkin, *Italy*, I. 507.

eulogy of our red man, or of the far more grotesque savage ideals presented by French writers at the beginning of this century.

Briefly, we must not understand the chastity and simplicity of Germanic life to have been coupled with those qualities which in our own stage of culture are sure to be found among persons who are simple and chaste. This German woman, who doubtless had a plenty of rough household virtues, with her vigorous barn-yard brood of children, passed into history as a sort of Cornelia or Lucretia, ruling an ideal family, where the daughters all look rosy and firm of flesh, and spin, and sing ballads about Arminius, with a shy, downward look when a certain brave young warrior of the next village is mentioned in domestic conversation, and where the sons hurl lances and speak tumultuous truth. Romance, as in Freytag's books, has helped the picture. Leafy forest, gay greenwood, are very well; but neither in Spain which coined the proverb nor yet in Germany, is it "always May"; and the scene shifts to those underground dwellings, covered for sake of warmth with dung, where the household passed its winter, — paterfamilias in that "single garment," moody and idle by the fire, the women weaving and spinning, and all glad of the coarsest sort of food. Between the picture of romance and the squalor and savagery which certain of the modern school are fain to pour over every portion of our forefathers' existence, lies a middle ground of common sense, based neither on romantic fancies, nor on the anxiety to push a theory of ethnology to its last gasp, but on the facts of history and the hints of early literature.

Nor do we need to give up the Roman's splendid and generous eulogy. We have simply to take it out of the sphere of rhetoric and reduce it to prose.¹ In the first place, polygamy was doubtless rare; but it had no particular moral sentiment against it. Precisely because it was no great crime according to German ethics, there is little said of the matter at all. Ariovistus had two wives. In Scandinavia, unlimited concubinage was common enough;² but it was not a lawful polygamy, seeing that only the children of the free wife had any rights in the family. The habit held late. Even so pious and noble a man as Charlemagne had a court—and a personal record—which in this respect will not bear scrutiny. Economy, not morality or sentiment, decided the matter. There was a total absence of sentiment in Germanic life; but a householder respected the capable mistress of his home—because she was capable; and he accorded her a certain supremacy, because only thus could she do her best work and bring about the most good for the family. She had, therefore, full sway in her own realm; she could not easily brook a rival. Perhaps the best modern instance of an old German's point of view would be that of the second George of England, "Paladin George," and his devotion to his queen. She had been most emphatically "the man of the house," and the king was in despair as he

¹ Part of it seems sober fact. "Marriages are strict, and no phase of their life is to be so highly praised. Alone almost of the barbarians, they are contented with a single wife, a few excepted, who, not for the sake of sensuality, but on account of their high rank, are sought several times in marriage." *Germ.* XVIII.

² Weinhold, *A. L.* 248 f. Grimm, *R. A.* 440. Later summaries indicate belief in polygamy among the old Germans: see v. Amira in Paul's *Grdr. d. germ. Phil.* II. 2, 143.

stood by her deathbed. Who does not remember his pathetic declaration that he would never marry again? — “Non, j’aurai des maitresses.”¹

The sanctity of the household, and in consequence the inviolable character of marriage, owed a good measure of their support to the old ceremony of ancestor-worship. It is not only Spencer and the ethnologists who insist on the wide importance of this cult; it is nearly, if not quite a settled matter in the court of scholarly opinion. Only a legitimate son, reasoned the German, can or will minister to his dead parents. To leave a son who should be head of the house, and therefore its priest, who would perform its rites according to the good old custom, and train up his own children to the same belief and practice, was one of the foundations of family life. Household gods were no fiction in those days. Now with such a sanction for the family, with such necessity for a head, for strict gradations of birth, we can see how the iron weight of custom and religious tradition, and not the feeble breath of sentiment, inclined the scale in favor of German women. If other reasons are needed for taking in earnest the main of Tacitean eulogy, we may point again to the importance attached to noble ladies as hostages, — in the Waltharius legend, heroine as well as hero is hostage at the court of Attila, — or to the honor paid to daughters of the royal blood, as among the Goths.

Again, there is the subjective side. The Germanic

¹ *Béowulf*, 1932 ff., describes the good and the bad type of woman in the persons of two queens, Hygd and Thrytho. The former is mild, generous, gracious; the latter remorseless, cruel, and altogether unwomanly.

woman stands out in history with a certain nobility and steadfastness of character. In the doubtful issues of battle—it is an enemy who records it—she prefers death to captivity. When Caracalla asked some German women whom he had taken captive, whether they preferred to be slaves or to be killed, they chose to die; and when in spite of this they were sold into slavery, they all put themselves to death. At Aquæ Sextiæ the women died rather than go into captivity; and the same is told of the Cimbrian women at Vercellæ. They tried to make a bargain for their captivity by which they could be slaves in temples and so preserve their chastity; and when this was refused, they killed their children and themselves. Paul the Deacon tells an odd story how the daughters of a certain Lombard duke, captives among a strange race, took heroic measures to preserve their honor;¹ we are glad to learn that these courageous damsels finally escaped and married, one the king of the Alamanni, the other a prince of the Bavarians.

Divorces and second marriages among the Germans were very rare. They were so frequent at Rome, however, that no barbarian custom could have seemed lax by comparison. It was the honorable work of the church, and that only after most desperate struggles, such as the contest between Lothar II. and Pope Nicholas I., that marriage came to be regarded as indissoluble. Among the Germans, infidelity on the part of the wife met swift and ruthless punishment, often death. Boniface² mentions hanging, and being whipped to death by other women.

¹ IV. 37. They carried putrefying meat about their own persons, in order to disgust the ardent suitor.

² *Epist.* 59.

Tacitus gives a vivid picture of the formal expulsion of an adulteress from her husband's home: "With shorn hair and stripped of her clothing she is thrust by her husband from his house, her relatives looking on, and so is driven with blow on blow through the whole village."¹ But all this, of course, was only for women. The church has the credit of forcing law and sentiment to take cognizance of the husband's guilt as well.

As regards that famous *sanctum aliquid et providum*,² we may well believe that there was abundant reverence for the prophetic and sacred character of woman; but it was a reverence based on religious tradition, and was at the farthest possible remove from mediæval or modern chivalry. We are hardly to think that the German attributed superior insight to woman as woman; the gods spoke through her. The Veleda, whom Tacitus mentions, both in this passage and in the histories, was a typical wise woman, who had prophesied the defeat of the Roman legions. From the words of Tacitus it seems that she was finally captured and brought to Rome.³ She was chosen, along with the leader Civilis, to decide a

¹ *Germ.* XIX., prefaced by the general statement: "paucissima in tam numerosa gente adulteria, quorum poena præsens et maritis permissa."

² *Germ.* VIII. Mention has been made of the services rendered by women in time of battle, — of the ardor inspired in the warrior at sight of his mother, wife, or daughter, and the thought of what captivity would bring to them. Captivity thus becomes doubly feared. For the enemy to have noble women as hostages is a most efficient restraint upon the Germans. Then Tacitus adds: "Indeed, the German thinks there dwells in his women *something holy and prophetic*; he neither spurns their advice nor neglects their oracular sayings."

³ "Vidimus sub divo Vespasiano Veledam." See remarks of commentators.

weighty question of state; but the messengers were not permitted "to see Veleda face to face and speak to her. Sight of her was withheld in order that the reverence for her might increase. She stood upon a lofty tower, and one of her relatives, like a messenger of the gods, carried question and answer."¹ Costly gifts were sent to her; a trireme, for example, captured from the Roman fleet.² Even the Romans themselves sought to win her good graces, in order to influence her countrymen. Nor were all of her functions oracular and prophetic; she was made umpire in civil disputes.³

Such a position offered attractions to the ambitious young woman of Germany who had a soul above marriage and a talent for ecstatic shrewdness. Indeed, we afterwards hear of a certain system of education in these matters, and find Norwegians and Swedes sending their daughters to Finland, the chosen country of magic and sorcery;⁴ a historic basis for the young woman of our own day who goes to Germany. Nor is this so far-fetched as it may seem. Runes, incantations, the cunning interpretation of various carved or written symbols, formed a good part of the sibyl's business; but to write and read in this way does not — under leave of Dogberry — "come by nature," and we may certainly think of a definite if not systematic instruction. It was doubtless such a woman's duty to etch upon the warrior's sword-blade those potent runes of battle, or to undo the harm of hostile runes. A Norse maiden who has lost her brother offers to carve the runes on the

¹ Tac. *Hist.* IV. 65.

² *Ibid.* V. 22.

³ Grimm, *D.M.*⁴ 334.

⁴ Weinhold, *Deutsche Frauen*, I. 105.

kevels, — pieces of wood, — if her father will make the memorial verse.¹

Moreover, as Grimm remarks,² it is women who mediate between divine and human; and Tacitus reminds us that such handling of holy business leads at last to godhead itself. “Veleda,” he says, “a virgin of the tribe of Bructeri, was respected far and wide in accordance with the custom of the Germans, who regard many of their women as sibyls, and, with growing superstition, as goddesses.”³ In other words, the sibyl did not lose her power at death; we shall see hereafter how “dead women” reveal to Scandinavian dreamers the secrets of another world, or tell of a mortal’s approaching death.⁴ Chip and cut as we will from the testimony of the ancients, this reverence for women, living or dead, stands out a stubborn fact in the Germanic character. It is one of those nobler elements which shine all the more clearly in the dark world of their ignorance and ferocity. Jewish tradition knew only the prophet, the masculine angel, who carries God’s will to a nation or to a man; but, as Grimm points out, with the German, “men are for deeds, and women are for wisdom.” Our ancestors assigned the *providum* to women; now it is a goddess, a Valkyria, — now it is a mortal maiden of the Veleda pattern, a *spâkona* in Norse, the *spae-wife* of our own Scottish tradition. It is such a woman who gathers up the past of Scandinavian myth in the *Völuspá*, the prophecy of the

⁴ *Atlamál*, 27.

sibyl, and sings the death-song of Germanic heathendom. On the border world of spirits and living men hover the forms of supernatural women warning, helping or banning. When Drusus had crossed the Weser and drew near the Elbe, there met him a woman, in form and habit more than mortal, who warned him¹ of his approaching end; and to another dreaded invader appeared a rune-maiden, and cried "Back, Attila!" to the Hunnish king.² Such are the Valkyrias and the Swan-Maidens of our mythology; and highest phase of all, we find, as in Greek and Roman tradition, the issues of death and life in women's hands. The Norns are governed by no god, be he Odin himself; and the vast underworld, a far older locality in myth than the Vikings' heaven of Valhalla, is ruled by the inexorable goddess, Hel.

Some are ready to affirm that this power of woman in the other world only reflects the earlier stages of actual life,—that the Valkyrias, for example, are nothing more than sublimated Amazons.³ Instances are not far to seek of this actual fighting on the part of Germanic women. Tacitus, indeed, confines their activity to exhortations, the rallying of a disheartened army; but when all this failed at Aquæ Sextiæ, when the drum-beating and the incantations were of no avail, then the German women fought fiercely enough around their "wagon-burg." An old story of some Germanic raid into Rhætia under the reign of Marcus

¹ In Latin. Suetonius, *Claudius*, I.

² *D.M.*⁴ 334.

³ So Holtzmann. Schullerus, *Zur Kritik des Valhøllglaubens*, Paul-Braune, *Beitr.* XII. 221 ff., esp. p. 225, makes Valkyrja = "Kämpferin." Very different is Vigfusson's notion: "chosen alien-woman," i.e. concubine of a king, *C. P. B.* II. 474. The old etymology was "chooser of the slain."

Aurelius, says that after the fight bodies of armed women were found upon the battle-field, covered with wounds. Thomas Wright notes¹ that during the middle ages Welsh women used to go with their men in hostile excursions across the English border; and for Germanic women, Rochholz has collected² abundant material bearing on this matter of physical bravery. Occasionally women took their own parts in the trial by combat; at least Weinhold quotes a curious case where a woman fights an accuser for her own cause.³ Her weapon was a stone bound up in a veil or hood; while the man stood half buried in a hole and fought with a stick; but this is not without a strong savor of burlesque. Probably the noblest figure in Scandinavian poetry is Hervor, as she stands undaunted before the flaming tomb of her father and demands the dead man's sword. Here is evidently the later Norse ideal of high-born womanhood.

It would be pleasant to suppress the final chapter of a story that begins so nobly; but if truth be told, the last state of this *sanctum et providum* in Germanic women was its worst. Christianity banned the old sanctities and mysteries, and the prophetic maiden — "*ea virgo*" — grew little by little into a woman who clung to the disgraced divinities, had dealings with Satan, was guilty of the lowest vices and the most disgraceful motives, did nothing but harm, caused storm, ruin, pestilence, and death. The much-abused "Dark Ages," however, went no further than bans and curses; it was reserved for the dawn

¹ *Womankind in Western Europe*, p. 5.

² *Deutscher Glaube u. Brauch*, II. 289 ff.

³ *Deutsche Frauen*, I. 205.

of our modern epoch to muster in a last attack all the old mummeries and superstitions; and the *sanctum et providum*, taking lead of the rest, deluged the age with that mass of cruelty, blasphemy, and obscenity which we now include under the half-harmless name of witchcraft.

So much for the general position of woman; we must now consider the household of which she was no unimportant member. The family, the kin, and so to the clan, is obvious progress of civilization, which at last reaches the point where private family life works to strengthen the state, and the state works to protect the family and guarantee individual rights. In early Germanic times the family, or rather the kin, is by far the most powerful factor in public as in private life. The family proper comprised the six relations of father, mother, son, daughter, brother, sister;¹ a wider circle began outside of this limit, and could be extended at will. These outer degrees of relationship were called "knees": one man was kin to another in the "third knee," "fourth knee," and so on. The number seems to count, not from a common ancestor, but from his children, — the point where the collaterals begin; so that the grandchildren, not the children, would stand "in the first knee." From the Anglo-Saxon *cnéow*, "knee," was formed the word for a family or clan: *cnéoris*. Other names were *mægð* and *cyn*, our "kin," whence "king" (*cyning*), or the "child of the tribe." It is on the basis of kin that we study Germanic institutions. A family, smaller or larger, held its members united by the strongest of bonds;

¹ See further K. von Amira in Paul's *Grdr. d. germ. Phil.* II. 2. 137 f.

² Schmid, *Ag. Gesetze*, p. 548.

they made common front against an enemy, and kept peace among themselves. The word *sib* means both "peace" and "relationship."¹ To give this little senate laws, to govern his immediate family and do his duty as member of the larger family, was chief business of the Germanic freeman aside from his vocation of warrior and his avocation of huntsman. Every member of the family was subordinate to its head, not simply under his control, but at his mercy: he could punish, sell, and, in primitive times, kill.² We must here as before clear our minds of modern sentiment, and keep in sight the rigid nature of household organization. We will begin at the foundation of the family, wedlock.

The German wife was not wooed; she was won, — and it is salutary to remember that "win" means first "to fight" and then "to get by fighting." In the time of Tacitus, a Germanic wife was probably bought with a price — not in our sense of buying wares, however — in a transaction between father and bridegroom, which marked a distinct advance from the earlier and universal practice of stealing one's wife. Of course, this earlier method of finding a helpmeet, did not cease utterly and at once. For Roman affairs

¹ "Gossip" has endured heavy fates. See also Old Saxon *sibbia* (Vilmar in *Altert.* p. 52); our words, *kind*, *gentle*; and Grimm, *R. A.* 288, where we are reminded that Old Norse *lid* meant both "help," "support," and "family."

² A little insight into this privilege and duty of a householder to punish — often by death — a guilty member of his family will set in clearer proportions the frequent domestic murders, as we should call them, of our old plays. Setting aside some obvious cases, we should thus understand the action of divers husbands and lovers, such as Philaster's act of "justice" in attempting to kill Arethusa, *Philaster*, Act IV.; Perigot's similar conduct towards Amoret, *Faithful Shepherdess*, Act III.; and, of course, Othello, and the rest.

we have the stock illustration of the Sabine women, a fine concentration of immemorial custom into a single act; and the Roman wedding kept a mock abduction as one of its features. The winning of Atalanta in the race is like those more strenuous proofs of muscle¹ which Gunther found necessary to win Brunhild in the Nibelungen Lay; while actual survival is evident at peasant-weddings of the Continent, where there is often a mock fight for possession of the bride, or a race between bride and bridegroom. So, at Frisian weddings, a sword is borne before the bride.² Actual traces — not by any means mere survivals — are found in Tacitean Germany. Arminius is said to have stolen his uncle's daughter and made her his wife. Perhaps the so-called indemnification of the daughter of a murdered man, which consisted in giving to her as husband one of the murderer's family, is only a later way of explaining the old system of wife-robbing. In Norse mythology, when the giant Thiassi is killed by a device of the gods, one of these is given as husband to the daughter of the victim. Severe laws were enacted against wife-robbing, a proof of its popularity; and the substitution of a price for armed force in marriage is a step in culture analogous to the composition of a murder by payment made to the victim's family instead of the primitive exposure to revenge, — the *wergild*. In fact, Waitz identifies the woman's price in marriage with her *wergild* itself.

Admirable as this arrangement must have seemed,

¹ Wrestling, hurling the stone, etc.

² Grimm, *R. A.* 167. For exogamy in England, see Grant Allen, *Anglo-Saxon Britain*, p. 81 f.

immense as were its advantages over the raw and brutal act of older times, even this peaceful bargain may well have run counter here and there to the stirrings of a young Germanic heart. In an Icelandic saga, Helga takes with outward assent and obedience the husband whom her father gives her; but her heart remains constant to her lover, Gunnlaug Snake-Tongue.¹ And we are led to ask the question, How far was the sentiment of love a factor in the Germanic marriage? Such material as Grimm accumulates² by way of partial answer will not serve our purpose. The passages are nearly all mediæval, and are rife with the first riches of chivalry and the worship of fair dames. We cannot possibly carry all that — a song, for example, from the *Carmina Burana* — back into Tacitean Germany. So that one is tempted to claim for Germanic life in its full extent the remark made by Grimm³ in regard to Anglo-Saxon poetry, — that nobody thought of portraying the love of woman. Where men and women live in anything better than savagery, some gleams of sentiment must flash out. Moreover, it must be remembered that monks, who wrote down our old literature, would be shy of such material. The story of Walter and Hildegund has all the external characteristics of a runaway match, — if one were not constantly struggling with the sensation that Hildegund and the treasure stolen from Attila were somehow both of the same character in the regard of the hero. The loves of Siegfried and Kriemhilt are already touched slightly with the glitter

¹ *Gunnlaugssaga*, ed. Mogk.

² *D. M.* 330 f.; III. 113 f.

³ Preface to his edition of *Andreas und Elene*, p. xxv: "An darstellung der frauenliebe hat uberhaupt auch kein andrer angelsächsischer dichter gedacht."

of mediæval tournaments and mediæval chivalry. On the other hand, the passion of Helgi and his Valkyria Sigrûn — a Norse background puts the actual date in some equality with far older Germanic material — is not without the charm that we are wont to couple with romantic love. But it is mixed with supernatural traits; it is the old union of a peerless mortal warrior with an immortal maiden. Helgi fights lion-like in the heart of battle; down hastens Sigrûn, as the clash of spears grows shriller, hovers protecting over her warrior, and cries to him in joy of his victory. But his answer is not a lover's. In the second lay of Helgi, however, we meet the full wind of passion.¹ "Hǫgni hight a king; his daughter was Sigrûn. She was Valkyria and rode air and sea. . . . Sigrûn rode to Helgi's ships." Then follows dialogue; then a battle, after which Sigrûn, promised in royal assembly to a certain king, seeks Helgi, greets him and kisses him under helmet; then the hero is moved to love the maiden. She says her father has promised her to another man; now she has crossed his will, and woe must follow. Helgi consoles her: "Fear not Hǫgni's rage nor the hatred of his kinsmen. Thou shalt live with me, maiden, for thou art of noble birth." In the storm at sea, while Helgi is faring to battle, he looks aloft, and lo, nine Valkyrias riding, and Sigrûn with them: and the storm is laid. A battle takes place, and all the kin of Sigrûn are slain, save only Dagr, and he made his peace. And Sigrûn learns of all the slaughter and weeps; but Helgi comforts her: "Weep not,

¹ See Hildebrand, *Edda*, 163 ff.; Simrock's *Edda*, translation, 150 ff.; the *Edda* of the Brothers Grimm, ed. Hoffory, p. 34 ff.; Vigfusson-Powell, *C. P. B. I.* 140 ff.

Sigrûn, it was for thy sake. Kings cannot command their destiny." And she¹ answers: "Fain would I give life to them that are dead, — but rest in thine arms as well!" Then comes the tragedy. Dagr obtains Odin's spear and revenges his father, and Helgi falls, and Dagr rides to Sigrûn and tells her what is done. First she launches her bitter curses upon him for his falsehood and treachery; and then she cries:² "Nevermore shall I sit happy at Seva fell, nor have joy of my life at morn or eventide; for nevermore shall I see the light flash on my lord's company, nor the war-steed with its gold bit bearing my king thither: nevermore shall I welcome the king home. . . ." Then follows a fine bit of praise of Helgi. The hero is buried, a hill heaped over him; but the Viking-Paradise of Valhalla claims him, and there is a characteristic touch of description as he enters, spying his old enemy Hunding: "Hunding, do thou make ready a foot-bath and kindle a fire for each of us (the company of the king), and tie up the hounds and bait the horses. . . ." But in the evening Sigrûn's maiden sees Helgi and a great retinue riding to his barrow or mound. And Helgi says, ghost-fashion, he is permitted to return to his barrow, but must ride the paths of air again before the dawn. And he calls on Sigrûn to come forth to him. In vain the maid warns her, with Horatio's arguments of harm, not to go forth. She goes, and speaks: "I am as glad to meet thee as are the greedy hawks of Woden when they scent the slain, their

¹ With Simrock and Grimm.

² This is the translation of *C. P. B.* I. 141. A different rendering, Simrock, p. 157.

warm prey, or dew-spangled espy the brows of dawn. I will kiss thee, my dead king, ere thou cast off thy bloody mail-coat. Thy hair, my Helgi, is thick with rime; thy whole body is drenched with gory dew; thy hands are cold and dank. How shall I deliver thee from this, my lord?" And Helgi answers: "It is thine own doing, Sigrûn from Sevafell, that Helgi is drenched with deadly dew. Thou weepst cruel tears, thou gold-dight sun-bright lady of the south, before thou goest to sleep: every one of them falls bloody, dank, cold, chilly, fraught with sobs, upon my breast. . . ." ¹ Then the passion of their old life gets hold upon them in the very tomb, and love is stronger than death. "Let us drink costly draughts," cries Helgi, "though we have lost both love and land! Let no man chant wailing dirges, though he see the wounds on my breast! Now are maidens, royal ladies, shut up in the barrow with us dead men." Quoth Sigrûn: "I have made thee a bed here, Helgi. . . . I shall sleep in thine arms, O king, as I should if thou wert yet alive. . . ."

Aside from the fact that Bugge refers this story to a Greek origin, and sees in Helgi and his Sigrûn a Norse version of the loves of Meleager and Atalanta,² there is too much of the Viking splendor in the whole setting for any primitive relations. True, the awe of monkhood is not upon these wild verses, — perhaps our English lovers sang as boldly, and made lays fit to frighten the pious scribe, — but neither is the primitive simplicity of passion. It is a fierce, world-worn,

¹ A familiar touch, known to folk-lore and legend everywhere.

² Bugge, *Studien*, pp. (according to Norwegian ed.) 12 f., 166. See W. Grimm, *Heldensage*,² p. 355.

martial love, with a Valkyria for Juliet, and a grim warrior for Romeo. It is the glitter of the viking-life, with its dash and spoil and glimpses of foreign braveries in court and city; and not even Helgi and Sigrûn can give us the picture which we desire of old Germanic love.

Aus alten Marchen winkt es
Hervor mit weisser Hand,
Da singt es und da klingt es
Von einem Zauberland, —

but the white hand beckons from a bower of romance, and the enchanted country lies this side of German forests. We must return to prose, and assume with safety that there followed upon the custom of bride-stealing the more peaceful marriage bargain, a step in civilization; and that in course of time, by the good offices of the church, women began to assert their likes and dislikes, choice began, sentiment — helped by what Dryasdusts call Mariolatry — unfolded, and only the dowry and marriage-settlement remained from the old conditions. For the first transition, we have a most edifying document in the shape of an edict issued by King Frotho of Denmark to the conquered Ruthenians,¹ that in view of the greater stability and safety of marriages made on the basis of a definite bargain, people are not to wed

¹ Saxo Gramm., lib. 5, p. 48, apud J. Grimm, *R. A.* 422: “*Ne quis uxorem nisi emptitiam duceret, venalia siquidem connubia plus stabilitatis habitura censebat, tutiorem matrimonii fidem existimans, quod pretio firmarentur.*” One can fancy Polonius, a countryman of this Frotho, saying to Laertes by way of further advice on the conduct of life, “When thou shalt marry, take a receipt in full from thy father-in-law.”

unless they pay for the wife. These base respects of thrift are still common among the peasants of Europe. Tennyson's Northern Farmer probably has plenty of colleagues in actual life, and Weinhold quotes a peasant's saying, which is even more to the point: "It's not man that marries maid, but field marries field, — vineyard marries vineyard, — cattle marry cattle."¹ Only in old songs and legends, and rarely there, we hear of the maiden choosing her husband from a number of suitors; ² and in one of these few cases it is a burlesque choice, a sort of raffle. Skathi, the giant-daughter, may choose one of the gods for husband, but is allowed to see nothing of them save their feet.³ We are on safer ground when we find Hjördis in the Volsungasaga choosing, at her father's bidding, between two kings, which she will marry. "Choose," says the father, "*for thou art a prudent woman.*" The transition to an unhampered choice was naturally slow. A cheerful milepost on the way is Cnut's law:⁴ "Neither woman nor maid shall be forced to marry one that is disliked by her, nor shall she be sold for money, unless [the bridegroom] gives something of his own free will." But usually we find the notion of a bargain carried out quite aside from any fancies of the young woman. Another Anglo-Saxon law,⁵ an old one, ordains: "If one buys a maiden, let her be bought with the price, if it is a fair bargain (*gif hit unfâcne is*); but if there is deceit, let him take her home again and get back the price he paid." The

⁵ Of Æthelberht, Schmid, p. 8.

nature of this bargain seems to have been slightly misunderstood by Tacitus; "the bride," he says,¹ "brings no dower to her husband, but the husband makes a gift to his wife." The price was not paid to her; but, at least in the oldest times, to her father or natural guardian; in later times the price was turned into a gift (like the famous Morning-Gift) or settlement for the bride herself. To sum up, and give an answer to the question about love or commodity in primitive Germanic marriages, it seems reasonable to exclude almost totally the workings of sentiment. Doubtless the ancestral German would have approved most cordially the sentence of Bacon's "Essay on Love": "They do best, who, if they cannot but admit love, yet make it keep quarter, and sever it wholly from their serious affairs and actions of life."²

All this concerns the marriage of free with free. If a free woman married below her rank, she came into a painful position, and must lose either her husband or her freedom. A curious custom of the Franks ordained that if a free woman was married against her will to an unfree man, she should go before the king and receive from him the offer of a sword or a spindle, — in this case, the signs of freeman and serf. If she chose the sword, she should then and there slay with it her unfree husband; if she chose the spindle, she went with him into unfreedom.³ This was a mild case; in other laws there is less symbolic machinery and swifter, sharper justice.

¹ *Germ.* XVIII.

² Even the marriage of Joseph to the Virgin Mary is treated by the Old Saxon *Héliand* as a formal bargain; he "buys" her. Cf. W. Wackernagel, *Kl. Schr.* I. 55, note.

³ See Wackernagel, *Kl. Schr.* I. 5 f. and references.

Thus the Lombard killed a serf who ventured to marry a free woman, and sold her into slavery if her life was spared; West-Goths and Burgundians scourged and burnt them both; while the Saxons punished an unequal marriage of any sort with death of man and wife.¹

Just as the husband bought his wife, so ancient custom permitted him to sell her. When the Frisians were forced by the officious severity of Olenius to pay a tribute laid upon them by the Romans, but hitherto exacted only in part, they gave "first their cattle, then their land, lastly their wives and children."² The free Saxon had the right to sell wife and child;³ and as late as the thirteenth century a German could do the same thing in time of famine and want. In Scandinavia the practice was common. Jacob Grimm,⁴ explaining the Anglo-Saxon phrase *fæle freoðuwebbe* as applied to a wife, "the dear peace-weaver," shows that *fæle* meant originally "that which one may buy and sell," like German *feil*; then "property, what is valuable"; then "dear." We need not make such frantic protest of horror. The Germans are fond of citing, at every possible turn, the public sale of a wife in Manchester, England, in 1843;⁵ while in the first decade of our century we find several cases on record. One wife "brought £1 4s. and a bowl of punch"; and another fetched

¹ *Ibid.* p. 6.

² *Ann.* IV. 72. Drusus had laid a light tax upon them, — tanned ox-hides for the use of the soldiers, — without specifying size or amount. Olenius required skins of the bison, — *terga urorum*, — or an equivalent.

⁴ *Andreas und Elene*, note, p. 143 (*El.* v. 88).

⁵ Wackernagel, *Kl. Schr.* I. 10.

twenty guineas, being "delivered in a halter to a person named Houseman."¹ By one of the oldest Anglo-Saxon laws, whoever enticed away a man's wife had to buy him another.² The thing sounds very heathen; but a well-known path of British law still leads an injured husband to much the same result.³

Generally, however, a matrimonial purchase was made for permanent investment. "Atli [Attila] gave for Gudrun a mass of treasure, thirty men-servants and seven handmaidens." Theodoric the Great gave his niece Amalaberga to Hermanafrið, king of the Thuringians, and received in payment from the husband a number of "silver-white horses."⁴ Occasionally we find excessively high prices quoted, as much as three hundred shillings among the Saxons, and among Alamannians and Lombards as high as four hundred, — no mean price when we reflect that one shilling represented the value of an ox at sixteen months.⁵ Moreover, it was all thrift, not gallantry.

We will suppose the price paid down and the bride ready to be brought into her new home. Not altogether empty-handed did she leave her father's house.⁶ According to Tacitus, she brought even weapons to her husband; but the Roman's explana-

⁶ *R. A.* 429.

tion is wholly fanciful. Then came the betrothal. Symbolic ceremonies, we may be sure, were not lacking; but they differed for different races. The bride's hair was probably bound up, and it may be that keys of the house were hung, in sign of office, at her girdle.¹ A boy walked before her, bearing a sword unsheathed, a custom which Müllenhoff refers to the worship of Freyr.² The symbol of a ring, that genuine *wed* or pledge, can be traced far back into the middle ages, and was of course well known to the Romans; but it cannot be proved to be of Germanic origin. Grimm suspects foreign influence.³ In the north, Thor's hammer was used to consecrate the bride, just as it consecrated the corpse for burial.⁴ Thrym, the giant bridegroom, eager for the nuptials, cries out:—

Bear in the hammer, bride to hallow,
lay now Miöllnir⁵ on maiden's knee,
hallow us twain in hands of troth!⁶

In fact, this famous but frustrated ceremony is so close a copy of old Scandinavian ways⁷ that some of the details may be given. Thor's hammer has been stolen by Thrym, and cannot be had unless the gods give the robber Freyja to wife. A trick is tried. Thor himself is wrapt in the bride's veil of Freyja, puts on the famous Brising necklace, has a bunch of keys jingling at his girdle, has jewels on his breast,

¹ Wackernagel, work quoted, p. 7 f.

² *R. A.* 167.

³ *R. A.* 432, 178.

⁴ Mannhardt, a little too eagerly, insists on its phallic significance.

⁵ Name of Thor's hammer.

⁶ *Edda*, Hildebrand, Thrymskv. 30. 3 ff.

⁷ So say Vigfusson and Powell, *C. P. B.* II. 472.

and a hood wrapt about his head, and, with Loki as bridesmaid, fares to Giant-Land. "Up spake Thrym,¹ the Giant lord: 'Stand up my Giants all, and strew the benches; they are bringing me Freyja to wife.' . . . Early in the evening the guests gathered, and ale was served to the Giants. . . . In came the Giant's aged sister (mother?) begging boldly for a bridal fee: 'Take the red rings off thine arm if thou wouldst win my love, my love and all my heart besides.' . . .'" Then Thrym calls for the hammer, Thor lays hold of it and slays the giants all. — Touches of burlesque are not unwelcome in this description, for the old-fashioned ways are evidently given with great care.

This actual marriage was surely an important ceremony. Waitz thinks² the affair was private and took place before the family alone. Tacitus does not commit himself; but Grimm insists that the ceremony was public, and collects later evidence in favor of his assertion.³ The clan and kin system demand the active co-operation of relatives; and Anglo-Saxon laws show traces of this, even where the church has begun to regulate the whole affair.⁴ Further ceremonies we may imagine. Thus, an oracle was doubtless consulted, and symbolic acts of cult were accomplished with reference to those divinities who presided over marriages, — Freyr and Freyja, one may guess. The good old ways were duly acknowledged by a mock fight, a race, or what not; and by the tears and lamenting of the bride's nearer

¹ Translation, *C. P. B.* I. 179 f.

⁴ Schmid, *Ag. Ges.* 390, 392.

relatives, o'ercrowed, however, by loud exultation from friends of the party of the first part. Songs and feasting could not have failed; rude jokes were perhaps in season, and the *gros rire* which lingered about the occasion down to comparatively modern times. So much of the Germanic function seems to have resembled the Roman ceremonies that we feel it a thousand pities to find no chronicler of the words spoken by the northern pair at their betrothal. What was the German equivalent of the Roman bride's simple declaration: "*Si tu Gaius, ego Gaia*"? — a piece of humility, by the by, which if generally known nowadays would distress honorable women not a few. It must be remembered that this formal engagement sufficed for the beginning of married life, and was so regarded long after Christianity had been introduced in Germanic lands. The actual ceremony in church took place later, and among the Anglo-Saxons was not allowed at all for the marriage of a widow.¹

A few particulars from later practice may be added to our guesses about the earlier affair. The wooing, or rather the bargain, was probably begun by father or friend, who, mostly along with the wooer, went on his errand with a great crowd of relatives and backers.² During the negotiations, our young bridegroom-to-be sat silent, listened to the eloquent praise of his own excellent differences, and like Messrs. Dodson and Fogg under equally trying circumstances, "looked as virtuous as possible." It is well

¹ *R. A.* 435.

² Weinhold, *D. F.* I. 317, reminds us that even god Freyr sent a messenger (see *Skirnismal* in the *Edda*) to woo for him.

known that this vicarious wooing is still practised in the very highest and in the very lowest classes of European society—the two sets of conservatives, princes and peasants. Again, the choice of a wife was not so limited as now. There were hardly any forbidden degrees of relationship. Mythology at least countenances even the marriage of brother and sister,¹ and in historical times one was at liberty to marry a stepmother, as witness Eadbald of Kent and Æthelbald of Wessex. The deceased wife's sister, the brother's widow, one's own niece,—any one of these was a lawful mate. Only slowly and with infinite pains could the church establish its salutary discipline and the doctrine of forbidden degrees.

Early marriages, say both Cæsar and Tacitus,² were rare among the Germans. Rare, too, were second marriages, as we are told in the *Germania*.³ As for the first statement, we must remember what "early" would mean in a Roman's mouth; for he was used to seeing wives of eleven or twelve years of age.⁴ Again, in our oldest German and English chronicles we find records of very early nuptials. This continued to modern times. Lord Herbert of Cherbury married at fifteen a wife of twenty-one; in his Autobiography, all he finds worthy of comment in the affair is "the disparity in years." However, Cæsar and Tacitus were doubtless right in their general statement; for it not only squares with our accounts of Germanic chastity, but agrees with that doctrine

¹ See Weinhold, *D. F.* I. 359 ff.; *Lokasenna (Edda)*, 144 ff.; and for details, E. Young, p. 126 ff. of the *Anglo-Saxon Law Essays*, by several hands, Boston, 1876.

² *B. G.* VI. 21; *Germ.* XX.

³ *Cap.* XIX.

⁴ Jung, *Leben und Sitten d. Römer*, I. 84 f.

of political economy which makes marriages scarce in proportion to the difficulty of supporting families. Such difficulty was no stranger to the German. As regards the second marriage, the old custom of widow-sacrifice would give a grimly sufficient reason for the female side. When this custom ceased, it left a strong sentiment against the second marriage. The widow laid her keys, emblem of household rule, upon the corpse of her husband, and they went with him into the grave.¹ So unusual, says Wackernagel, was the marriage of widows that it is used as tragical *motif*.

Death was not the only means of breaking the marriage bond; adultery — but, as was said, only on the side of the wife — destroyed the pact. The consequences of this crime have been in part defined;² but the punishments savor of a ruthlessness which must have corresponded to a great horror of the offence. To kill her was a clear privilege of the husband, but such a punishment as to be trodden and suffocated in mud or slime was prescribed for the Burgundian false one. The Frisian could hang, burn, kill with sword, or even flay his adulterous wife. The Anglo-Saxon punishment, already quoted, is much milder and falls on the seducer, who must pay the woman's³ *wergild* and buy the husband another wife. Perhaps the mildness is only accident of omission; for we are not told what became of the guilty wife. In later tradition we get some bloody and savage touches which may well preserve the

¹ *R. A.* 176, 453; Wackernagel, *Kl. Schr.* I. 31. ² See p. 139, above.

³ Some interpret it to mean the man's own *wergild*. But see Schmid, p. 5, note.

practice of an older day. Thus, among other instances, the tragic ballads of *Old Robin of Portingale* and *Little Musgrave and Lady Barnard* agree in making the injured husband inflict a cruel mutilation upon the wife. In the first:—

Hee cutt the papps beside her brest,
And bade her wish her will ;
And he cut the eares beside her head,
And bade her wish on still.

In the second:—

He cut her paps from off her brest ;
Great pity it was to see
That some drops of this ladie's heart's blood
Ran trickling downe her knee. ¹

This agrees well enough with the scene in Tacitus, an angry husband scourging the shorn and unclad offender from his home ; and it gives us by contrast better ability to appreciate the infinite despair and tenderness of Othello's words:—

I that am cruel, am yet merciful ;
I would not have thee linger in thy pain.

¹ Child, *Ballads*,² III. 241, 245.

CHAPTER VI

THE FAMILY

Hospitality and gifts — Responsibilities of the head of a family — Importance of kinship — Conflicting duties — Feud — *Wergild*, and other substitutes for feud — Paternal power — Exposure — Education of children — Names — Old age.

ESTABLISHED in their home, the young couple took up a life rude enough to our eyes, but not without its virtues and even its amenities. Hospitality was instinctive in the German. To be sure, the laws and customs of modern life, as they touch upon personal property, are far removed from the simple notions of our forefathers; and it is not to be denied that the idea of individual ownership has developed at the expense of that primitive generosity. So much may be granted; yet the effort to make this hospitality of the Germans a proof of their absolute savagery — one trait the more to support a parallel with modern Africans — is by no means to be allowed.¹ One is inclined to prefer the exaggerated praise of Tacitus.² While we may justly place much of this generosity to the credit of an almost communal system of property,

¹ Lippert's admirable book on *Culturgeschichte* goes too far in this direction. The author sees all things in Africa, after the Malebranche fashion of his school.

² *Germ.* XXI. See also Cæsar *B. G.* VI. 23.

enough of the pure virtue is left to deserve our admiration. Savages do not pass laws to promote the magnanimous treatment of guests; and the ordinances quoted by Grimm must rest on a very old foundation.¹ Thus we find a penalty imposed on the householder who may refuse shelter and fireside to the traveller; "shelter, and room by the fire, and water," — these were not to be denied under any pretext.² Even if the guest had slain the brother of his host, — no matter; he must come and go in safety;³ and what that meant in those days is evident from the song of the two mill-maids who are grinding King Frodi's fortune, and in their description of a universal peace can find no climax better than this: a time when "no man shall harm his neighbor . . . nor smite with whetted sword, yea, *not though he find his brother's slayer bound before him.*"⁴ Similar phrases recur constantly in mediæval poetry as type of the highest form of self-restraint and noble toleration. This hospitality was limited, of course, to transient guests; foreigners who came into a country without friends and kin behind them, and made mien to stay, were in danger of unfreedom: a year and a day they might bide, and after that it was often slavery.⁵ But the wayfaring man who had definite objects in view was welcome to this boundless hospitality. In later times we find the fixed custom that a guest might tarry up to the third day; and Grimm quotes an Anglo-Saxon law: "two nights a guest, the third night one of the household."⁶

³ R. A. 400.

⁴ C. P. B. I. 185.

⁵ R. A. 399.

⁶ See also Schmid, *Ags. Ges.* p. 286.

Interesting survivals of this doctrine of the three days' grace occur in popular sayings and customs. German doggerel, more vigorous than elegant, declares:—

Den ersten Tag ein Gast,
den zweiten eine Last,
den dritten stinkt er fast,¹—

which is astonishingly like Herrick:—

Two dayes y'ave larded here; a third, yee know,
Makes guests and fish smell strong; ²—

and both are matched by a Latin effusion,³ which is perhaps the original. But Herrick puts such growling rudeness into the mouth "of some rough groom"; and in conspicuous antithesis praises the fine old hospitalities of his friend in words that scent good cheer and spread the honest savors of an English kitchen. We may draw our conclusions of heredity, and fancy this knight with his "large ribbes of beef" an unmistakable descendant of Chaucer's franklin, whose

. . . table dormant in his halle alway
Stood redy covered al the longe day.

Further, we may think that this ruddy epicure himself, in whose house "hit snewed . . . of mete and drynke," did nothing more than keep green the laurels of Germanic hospitality. For let us listen to Tacitus: ⁴ "Banquets and hospitality find such favor

¹ Weinhold, *Altnord. Leben*, p. 447.

³ Printed by Wright, *Reliquiæ Antiquæ*, I. 91, and *Domestic Manners*, etc., p. 333.

⁴ *Germ.* XXI. See Cæsar *B. G.* VI. 23, whose testimony is in the same strain.

in no other nation. To turn anybody, no matter who he may be, from one's door, is held as a crime; he is entertained according to the means of the host, who provides his best. When that is gone, the host becomes guide and companion to his guest, and together they seek the hospitality of some other board, going uninvited into the first convenient house. Here it is the same thing; they are received with like friendliness. Neighbor and stranger are made equally welcome. To the parting guest, so custom ordains, is given whatever he happens to desire; and there is equal freedom for the host to ask something of him." It seems a little ungracious to ascribe all this to the absence of any notions about individual property or the value of things. The astonishing hospitality of the Icelanders, who harbored absolute strangers an entire winter, who kept a table always ready for chance visitors whoever they might be, and whose very dogs were glad to see a guest walk in,¹—this is certainly a point or two above the African standard, in kind as well as degree.

The guest, however, had certain forms with which he must comply, if he would not run the risk of being cut down like a thief. He must keep to the highway, and blow sufficiently upon his horn, that no mistakes might be made.² "If a far-come man, or a stranger, go out of the road through the forest, and do not cry out nor blow his horn, he is to be held as a thief." But if a man were lost, or could find no house, he was at liberty to cut standing corn for his horse,—one law says he may let the horse "tread

¹ Weinhold, *D. F.* II. 195.

² Schmid, *Ag. Ges.* p. 28.

into the corn with his fore-feet, and so eat," — and he might hew a little wood to mend his wagon.

Of course, it must not be forgotten, that along with wider hospitality went narrower protection of law. What law did not require was ordained by use and tradition; and we may say of the Germanic treatment of guests what Tacitus remarks about one of the other virtues, — that "good custom avails more with this people than good laws elsewhere."¹ Moreover, the family took the place of the state as regards responsibility for a stranger's doings. "If," runs an old Anglo-Saxon law, "if a man, in his own house, harbors a stranger three nights, merchant or other person, who has come over the mark (boundary), and feeds him with his meat, and [the stranger] then does evil to any one, let the host bring the guest to reckoning, or do justice for him."² An insolent guest might be promptly beaten by his host.³

The custom of giving some present to the parting guest has been mentioned in the passage from Tacitus, and forms the subject of a monograph by Jacob Grimm.⁴ Of the articles which a German — prince or freeman — was wont to bestow on vassal, friend, or guest, Grimm names land, which was naturally the favor of chieftain or king, then food and drink, valuable animals, clothes, rings, and similar objects. Even in the middle ages money was little used for gifts; and we still shrink from such a present where a definite object of equal value would arouse no scruple. The simplest gift was a glass of wine or mead;⁵

¹ *Germ.* XIX.

² Schmid, p. 14.

³ Grimm, *R. A.* 744.

⁴ *Ueber Schenken und Geben*, Kl. Schr. II. 173 ff.

⁵ The double meaning of German *schchenken*, "to pour out" and "to give," is thus explained by Grimm.

and often with the liquor, one gave the cup that held it. Of animals, horses were the favorite gift, as in our *Béowulf*, and we remember that the price of a certain Germanic bride was paid in white horses. An Anglo-Saxon alliterating formula was *mearas and maðmas*, "horses and treasure." Dress was often a gift, as in the Nibelungen Lay, where it is coupled with horses.¹ Golden arm-rings were the aristocratic present, — witness Hildebrand's last appeal for reconciliation with his son. Naturally, the course of conquest and settlement made land the gift which men prized the most; on the border of two epochs, and uniting the nomadic and the agricultural standard, may be mentioned the gift which Hygelac made to Eofor and Wulf when they had slain his enemy, "a hundred thousand of land, and twisted rings";² moreover, to Eofor he gave his own daughter. Generosity could go no farther.

These welcomes and gifts, these open doors and inviting tables of the old German, are not precisely in tune with that secret underground passage from the house to field or wood, which was provided for escape from the frequent raids and sieges of one's neighbors. The German's house was not only his castle, but it was very often a beleaguered castle, the refuge of his clan. For he was the protector and head of his house; all its quarrels were his quarrels; and when the family, or the meanest member of it, was wronged, he was its avenger. In the same way, he was responsible for wrongs done by his family; and thus all his relatives were bound with him in a

¹ *N. L.* 28: "Den vremden und den kunden gab er ross und gewant."

² *Béow.* 2995 ff.

common bond of responsibility. To inherit the family privileges was to inherit its duties. A law of Cnut is very instructive as marking the passage of the Germanic mind out of the stern old logic into a temper of equity. "It was once the custom," says our wise king, "that the child which lay in cradle, even though it had tasted meat, was deemed by covetous men just as guilty as if it were possessed of its understanding (*gewittig*). But henceforth I earnestly forbid this, together with many other things which are loathsome to God."¹ A law of Ine had provided that if a man steal with the knowledge of his family, they should all go into bondage together.²

Thus the chief burden, as well as the chief glory, fell upon the head of the house. To be a father, or the eldest son of a widow, or the eldest of near kin in guardianship of minors, carried with the position responsibilities that now seem almost incredible. Such a person was executor of a code of vengeance which we do not know, simply because law and the administration of government have taken its place. "Revenge," said Bacon, "is a kind of wild justice"; but it is more exact to say that justice is tamed and ordered revenge. The law now stands in relation to the murderer where once stood the head of the murdered man's family, who has thus deputed the state to perform his ancient duty.³ Despite a somewhat sophomoric note, this explanation agrees with the facts of the case. But it was a far intenser feeling

¹ Schmid, p. 312, 76, § 2.

² Ibid. p. 24, 7, § 1.

³ *Lex Angl. et Wer.* VI. (and Uhlund, *Kl. Schr.* I. 218): "Ad quemcumque hereditas terræ pervenerit, ad illum vestis bellica, id est lorica, et ultio proximi, et solutio leudis, debet pertinere."

that then filled the avenger of blood, than any abstract severities of our modern justice; for it knew no extenuating circumstances, and did not sunder one motive from another.¹ It had the tremendous sanctions of religion. By the old belief, by the cult of family *manes*, an unappeased parent-soul hovered about the very hearthstone, a perturbed spirit only to be brought to rest by the grateful blood of the murderer offered by son or kinsman. So the sense of kin took just precedence of all human bonds; and in the swan-song of Germanic mythology, the *Völuspá*, our sibyl can find no sign of impending doom so certain and disastrous as the breaking up of family ties: "Brother shall fight against brother, and they shall turn to murderers; children of one parent shall bring shame upon their race. . . . Adultery shall flourish."²

X In this kindly soil of the family flourished such growth of sentiment as that rough life brought forth. Peace, good-will, the sense of honor, loyalty to friend and kinsman, brotherly affection, all were plants that found in the Germanic home that congenial warmth they needed for their earliest stages of growth. The double notion of blood-relationship and mutual peace is shown by a passage in our oldest English poem, *Widsið*:— X

Hrothwulf and Hrothgar held the longest
open concord, uncle and nephew,
after they routed the race of Wicings,
fell'd the pride of the power of Ingeld,
hew'd down at Heorot the Heathobard's line.³

¹ See Stubbs, *Const. Hist.* I. 81.

² Hildebrand, *Edda*, p. 12. Metaphors of the family, *C.P.B.* II. 473 ff.

³ vv. 45-49.

Pretty, moreover, is the old "kenning," or metaphor for "wife," — *the weaver* (or maker) *of peace*; whether with Grimm we explain it as referring to the household union,¹ or because a marriage brought together two families and tended to set aside feuds.² Situations akin to that of Rodrigue and Chimène in the *Cid* may well have burdened many Germanic lives, as witness an episode of the *Béowulf*.³ Freawaru, daughter of the Danish Hrothgar, is married to Ingeld, son of a prince who has been slain in battle against Hrothgar's forces; and the marriage is meant to put aside the necessity of blood-revenge. For a while Ingeld forgets his wrongs; but an old warrior of his train⁴ spurs him to vengeance, which is all the more easily suggested by the insolence of a young Danish noble, attendant upon his countrywoman and princess, who wears, in open sight of all, the sword once wielded by King Froda, the fallen father of Ingeld. Then oaths are broken, "the love of woman grows cooler in Ingeld after he has felt the waves of care," and blood must flow for blood.

Evidently it was a good thing to belong to some large clan, and an honorable thing to be its leader. Thus the power of King Hrothgar is described by the poet as based upon his increasing authority over kin and clan.⁵

Such speed of war was sent to Hrothgar,
honor of battle, that all his kin
obeyed him gladly, till grown were the youth,
the crowd of clansmen. . . .

¹ *Andreas und Elene*, p. 144 f.

² See also such a name for a queen as *friðu-sibb folca*, "peace-kin of peoples," the relative who brings peace to clans. *Béow.* 2017.

³ 2021 ff. See, for Danish parallels, Müllenhoff, *Beowulf*, p. 42 f.

⁴ In Saxo's story it is the fierce Starcatherus. ⁵ *Béow.* 64 ff.

That is, he was head of the family, and his kin were glad to acknowledge it and serve him. The youths springing up in his service are partly kinsmen, partly the "retainers" or *comitatus*, a peculiar Germanic institution which we shall presently consider. The value set upon the ties of a family is shown by certain verses in the Old Saxon paraphrase of the gospels, the *Héliand*. It is the passage of St. Matthew which makes it profitable for us that one of our members should perish, and not that the whole body should be cast into hell. As Vilmar points out,¹ the German laughed at scars, and found more sport than sorrow in the notion of mutilation. So the translator adds in explanation a far more terrible alternative, — separation from one's kin. "*Better to throw thy friend far from thee, however close the sibbia, the kinship, may be,*" than to let him lead thee into sin.

The family tie engendered the earliest notions of duty, whether to the living or to the dead; and this sense of duty is the moral foundation of all Germanic history. Alive, the head of the house exacted obedience and respect, fostered order and justice; dead, he was the object of cult, grew mightier with lapse of time, and as a tribal god sanctioned wider and deeper laws of society. His fireplace was the primitive council chamber; his grave was the primitive altar. Originally the family or clan made a definite sphere or system of life; outside of it the homeless man felt indeed that chaos had come again. The heaviest punishment was expulsion from the family;² and banishment, the crown of sorrow for a German, is

¹ Work quoted, p. 57. *Héliand*, ed. Heyne, 1492 ff.

² See Dahn, *Bausteine*, II. 79 ff., on Family and State.

a topic repeatedly touched upon in Anglo-Saxon poetry.¹ The wretched victim of such a fate was cut off from all protection of law and order, and renounced the benefits of civilization. Thus at the other extreme of fortune from the proud head of a proud and powerful clan stood the clanless man, the exile, the outlaw, who had no protecting relative, no strong kinsman, no "gold-friend and lord." Those touching Anglo-Saxon lyrics, *The Wanderer* and *The Seafarer*, mourn such a fate.

The head of the narrower family in normal circumstances was the father. The fatherhood of God appeals with peculiar force to the German. Thus, as it would seem, when the poet of *Béowulf* tells of the murder of Abel and of the doom of Cain, he treats the punishment as an act of vengeance undertaken by God for one of his human children.² Severe enough, too, seemed Cain's punishment. He was "banished from his own kind," direst penalty short of death. With such notions of the power and privilege of fathers, the Aryan horror of parricide can be understood. Not without interest for mediæval sentiment on this theme is an account quoted by Kemble³ from Barbazan's *Fabliaux et Contes*, as a parallel to Solomon's famous decision. Two princes — brothers — quarrel about their inheritance. The father's corpse is set before them, and it is announced that he who shall drive his spear furthest into the body is to be the heir. "The elder strikes home; but the

¹ Lingering in words like our "wretch," or German *Elend* (*Elland*).

² *Béow.* 107 ff. The use of words like *gewræc* "wreaked, avenged," and *fæhðe*, "feud," as applied to the crime, surely upholds this notion.

³ *Salomon and Saturn*, p. 106. He thinks the source of the story is Cap. XLV. of the *Gesta Romanorum*.

younger, detesting the impiety, prefers losing all share in the inheritance to mangling the corpse: he is in consequence, by consent of all the barons, put in possession of the principality." In an age which was full of murder and sudden death, which saw no crime in the open killing of a man, this horror of parricide is significant enough. Such a deed struck at the very heart of social order and religious sanctions.

To the simple mind of those days it seemed a good thing to rivet this family bond by gifts. If a young prince, says the poet of *Béowulf*, will only give rich gifts to his father's friends and kin, he may count in his old age upon comrades glad to help him and stand by him in stress of war.¹ For such pains and benefits of kindred were not bandied about indiscriminately; they were guarded with scrupulous care and kept at a proper value. Hence, too, we find in all older dialects a multiplicity of names to express relationship by blood; and richer even than Germanic, are the Slavonic, Lithuanian, and Finnish, which, as Grimm has noted,² longest kept up the primitive ways. When this genuine relationship failed, the German could enter upon an artificial one. It is true that adoption, as a means of increasing one's family, was hardly a Germanic custom;³ but the so-called blood-brotherhood was a special device of our ancestors, and popular enough. We know it best in its Scandinavian form. Two youths, often foster-brothers, cut each the palm of

¹ *Béow.* 20 ff.

² *G. D. S.*³ p. 92 f.

³ Dahn, *Bausteine*, II. 82 ff. Scherer sees a trace of adoption in *Béow.* 858 ff. The Danes praise *Béowulf* and say he would be a good king; they wish Hrothgar, says Scherer, to adopt the hero. *Zeitschrift f. oesterr. Gymnas.* for 1869, p. 98. See also Paul's *Grdr. d. germ. Phil.* II. 2. 140.

the hand and let the blood run from it into a hollow in the ground; here their blood mingled while they grasped hands and swore brotherhood for life. More solemn ceremony, with intricate symbolism, consisted in their taking the oath as they kneeled under strips of turf.¹ Thus their blood became one, they were kin, and on each devolved the sacred duty of avenging the other; such an artificial relative could even claim his share of the *wergild*. Sometimes the two held their goods in common. How vivid must have seemed to the German that passage of Genesis where the blood of a slain brother cries from the ground! As usual, myth has absorbed the human relation: Odin and Loki are said once to have sworn brotherhood. Loki, detected mischief-maker, comes unbidden to a banquet of the gods, where "not one speaks a good word for him." The situation is dramatic.²

Loki. Thirsty, I, Loki, came to this hall . . . to beg the Anses give me but one draught of the goodly mead. Why sit ye so silent, ye moody gods, speaking no word? . . .

Bragi. The Anses will never give thee seat or place at this banquet. . . .

Loki. Dost thou remember, Odin, how we two in days of old blended blood together? Thou sworest never to taste ale unless we drank together.

Odin. Get up then, Widar, and let the Wolf's father [*sc.* Loki] sit down to the banquet, that Loki may not make mock of us here in Eager's hall.³

² Translation is from the *C. P. B.* I. 102. *Lokasenna*, 6 ff., in Hildebrand's *Edda*, p. 35 f.

³ Grimm (*G. D. S.*² 97) reminds us of the same relation between Gunnar and Sigurd.

Blood-brotherhood is a very pretty word for our ears ; but in the brave old days it was no metaphor. The soul was thought to abide chiefly in the warm blood, as well as in the breath and the eyes. "Heart and eyes" were the main thing, as can be learned from many a later folk-song. We need not discuss the question of survivals from an age of universal cannibalism ;¹ there is no doubt that with our ancestors, as with Mephistopheles and his brethren, blood was "ein ganz besonderer Saft," — though the signature in one's blood is only an academic fancy. The old notion was to acquire the courage and spirit of a slain enemy by drinking his blood ; and vague survivals of this are rife in Scandinavian tradition. Blood is the abode and source of life. Blood brings a life glow into the cheeks of the dead, and loosens the tongue of Teiresias in prophetic speech, as Odysseus, in that unrivalled scene, stands by the trench filled with blood, and the pale shades flock about him, eager to drink. In the burning hall of Attila, Hagen and the Burgundian king ward off the effects of fearful heat by drinking the blood of the slain that lie about them, — here merely a touch of fantastic horror, quite forgetful of the original meaning. Blood mixed with honey we meet in Norse myth. Kvasir is the wisest of men. He is slain by the dwarfs Fialar and Galar, who mix his blood with honey ; whoever drinks of this becomes a poet or a seer. Eating the heart is a tradition deep-rooted in Germanic mythology, and later it was a characteristic of witches, who fell heir to most of the earlier habits of Asgard. It

¹ Cf. Lippert, *Culturges.* I. 61 f. *Religion der europ. Culturvölker*, p. 48.

is needless to insist on modern survivals in proverb and tradition; "blood," we say, "will tell," or it "runs thicker than water."

The ties of blood being the most sacred known to the ancients, the one band of society, the beginning and chief sanction of religion, it was natural that any conflict of duty, any case of doubt which way the claim of blood should draw one, must have formed chief material for their tragedy. Known in some form all over the world, this tragic motive was developed among our forefathers with a simple grandeur which stands alone in history. Laius and Œdipus as tragic victims rank no whit higher for grandeur of conception than Hildebrand and Hathubrand, or Ruedegêr of Bechelâren in the *Nibelungen Lay*.¹ The episode of Ruedegêr outweighs a hundred tragedies. A vassal of the Hunnish king, he meets the Burgundian guests as they enter Attila's dominions, receives them in his own palace, and gives his daughter to the youngest of the brother-kings. When the great struggle in the burning hall grows almost hopeless for Kriemhild, she bids Ruedegêr, as her husband's sworn man and vassal, to go into the hall and slay or bind her own brethren, of whom young Giselhêr is the elected son-in-law of Ruedegêr. What shall he do? "God help me," he cries; "would that I were dead!" Whatever he decides, his honor must be tainted,—to war against his own kin, or to desert his chieftain in his time of need; the agony of doubt was never

¹ Many other examples will occur to the student of tragedy, ancient or modern,—Orestes, Hamlet, Rodrigue, and many more. The sacred duty of revenging one's kindred or friends was the soul of feud, and fills Aryan literature from Achilles down to Hamlet.

painted with such naked force. Heavy-hearted, he obeys his lord, and goes to a brave though unwelcome combat and to a welcome death. Further, there is a little episode in *Béowulf*, — hardly an episode, one may say, but a mere hint, — where King Hrethel's oldest son, Herebeald, is killed by a purely accidental shot from the bow of the second son, Hæthcyn.¹ The old king pines away, not in our modern grief, but because of the relentless misery of irreconcilable relations with the second son, — the duty, as avenger, of killing him, and the paternal duty of protecting one's own offspring. For our forefathers, the tragedy of this situation needed no words: an allusion was enough. The famous saga of the Volsungs records still another case. Siggeir and Signy are man and wife; but Siggeir has killed Signy's father and all her brothers except Sigmund. Signy, as a duty to her kin, does all she can to help her brother accomplish his revenge against her husband. At last the hall of Siggeir is set in flames, and there is no hope for him. Then Signy, in spite of all appeals from her brother, kisses him farewell and goes into the burning hall to die, as befits a Germanic wife, at the side of her husband. Exaggerated, unnatural, void of all sweetness and light, this story is nevertheless full of a wild energy, like the times that brought it forth.

This wild energy, the provocations and opportunities of such a life, led, of course, to ceaseless feuds. Such a state of things became impossible; a race of men cannot go on forever cutting their own throats, and the race itself seems to make from time to time

¹ *Béow.* 2438 ff.

an almost individual effort at self-preservation, reform, and progress. So came the great step of civilization which compounded a murder by payment of a definite price. Probably it began, as was only just, with cases of accidental killing or maiming. This *wergild*, or man-price, indicates system, organization, and offers sure evidence of incipient political life. It was already known in the time of Tacitus; and was reckoned in terms of flocks and herds. The sum was fixed according to the rank, birth, and office of the person killed; and was paid to those whose duty would otherwise compel them to take vengeance for the deed. The *wergild* for women varied;¹ now it was the same as that of a man, now only half as much; but for a pregnant woman the price rose very high.² Kings generally stood quite above any such provisions, except in a few Anglo-Saxon laws. But let us hear what Tacitus has to say about the whole matter of revenge and composition for murder. "It is a duty," he says, "to take up as an inheritance the feuds of one's father or relatives. And yet these feuds are not proof against all settlement (*nec implacabiles durant*); even murder is compounded with the payment of a definite number of cattle or other animals, and the whole family receives the price. . . ."³ We can see how eagerly kings would foster this check on unlimited feud; and we are not surprised to note the prominent place given to the *wergild* in all systems of Germanic law. First of his secular laws stands King Edmund's decree in regard to murder

¹ Of course these are mainly mediæval distinctions, but seem of primitive origin.

² *R. A.* 404 f.

³ *Germ.* XXI.

and the *wergild*; let the murderer, of whatever rank (*sý swá boren swá he sý*), bear the vengeance that is due unless he can pay the full price within twelve months; and if any of his relatives harbor or help him, they, too, are liable to the act of revenge.¹ Even where a man has made himself hated far and wide by crimes of every sort, his murder must be compounded. Gregory of Tours tells this of one nicknamed Avus, who after manifold sins was killed in a quarrel by a servant of his adversary. The latter, however, was forced to pay proper *wergild* to the sons of the dead man.²

In course of time, fines were set not simply for murder, but for every sort of wound; they were assessed, much in the fashion of our modern "damages" for accident, in proportion to the importance of the bodily loss, — eye, hand, limb, or what not. The following law of Æthelberht marks progress indeed: "If one man, with his fist, strikes another upon the nose, [the fine is] three shillings."³ As to the price itself, there is great variation in different places. From a hundred "shillings" up to very large sums, the price was fixed according to the rank of the slain, — freeman, noble, king's thane, and so on. The church had part in the system, and ecclesiastics enjoyed a high *wergild*. But to define these values would be a task almost as useless as hopeless.⁴

Feud, which this system was meant to lay aside, seems to have been a wide word. It included the strained relations between King Hrethel and his son,

¹ Schmid, *Ags. Ges.* p. 176. ² *Greg. Tur.* VII. 13. ³ Schmid, p. 6.

the murder of Abel, Grendel's direful raids upon the hall "Heort," and of course the hostility between two families or clans, the private shedding of blood for blood. There was utmost need to curb this ferocity of the Germanic temperament. Maurer records a case among the Norsemen, who kept longest and strongest the old traditions, of children who would not play with a companion until he had at least killed some wild animal.¹ The Scandinavian annals and legends are full of such stories, in contrast to the records of Slavonic races, who have always been averse to the feud. We open the *Egilssaga*,² and find that a certain man has two sons, one of whom, Egil, "is said to have begun to make verses in his third year, and in his seventh year killed a boy who had affronted him at a game of ball." Another boy of nine could boast that he had killed three men; and Olaf Tryggvason at the same age took up a feud and avenged his foster-father. Instructive is the dialogue, ascribed to Egil, between the earl's daughter and the boy who is her partner at table.³ She despises such a youthful gallant: "Thou hast never given a warm meal to the wolf (*i.e.* slain men in battle). . . ." And the boy answers: "I have walked with bloody brand and whistling spear, with the wound-bird following me. . . ." Such were the credentials of good society. To keep to the strict line of the feud, we find Grettir coming back to Iceland, after a long absence, to learn that his father is dead and his brother slain. "After he had visited his mother, the first errand was to his brother's baneman

¹ *Bekehrung d. norweg. Stämme*, II. 172.

(murderer) whom he speedily killed.”¹ So in Viga Styr’s saga, Styr boasts that he has killed thirty-three men and never paid a penny of *wergild*. Later, he meets death at the hand of a youth whose father he had killed and to whom he contemptuously refused the price of composition.² Earlier accounts, and from a different country, record the same deep-rooted Germanic love of the feud, of bloodshed and revenge. The Franks were so ferocious in their vengeance that they even infected their Roman neighbors and subjects.³ One story out of many may illustrate the Frankish spirit. A queen, who in life had been a monster of crime and oppression, lay on her death-bed. Before she gave up the ghost, however, she demanded companions in her death, “in order that at her funeral others should be wept for besides herself.” She called the king, and complaining that the medicine which had been given her by her physicians was the cause of her death, made him swear that, as soon as she died, these two doctors should be slain with the sword; and it was done.⁴ Sometimes the tragedy shades down into comedy. A Scandinavian saga tells of a man who was hit on the neck by an iron pan, thrown in a quarrel, and was slightly injured. Some years later, wooing a certain woman for his wife, he is rejected by her relatives because he has never taken vengeance on him who hurled the pan.⁵

Sullenly and slowly feud yielded its rights to a system of fines, — punishment would have been

⁵ Dahn, *Bausteine*, p. 104.

impossible, — and did not come to an end, so far as Germany was concerned, until the close of the fifteenth century.¹ Where the feud would not yield to the payment of a price, men turned to a quasi-process of law deftly hidden in the guise of warfare. At first sight, trial by battle as a legal remedy looks absurd enough; might is still right, as in the feud. We forget, however, that the old feud left no avenue open for any sort of justice, and made the innocent suffer in shoals for a wrong, — perhaps a right, — done by one man who happened to be of their kin. Blood was the test. The punishment was not only inherited, as in our commandment, but collateral. Kemble² quotes the indignant reproach of Wiglaf to the thanes who have deserted their prince: every member of their clan, every relative, he says, shall pay for the cowardice of these few men. For as the clan all shared in the *wergild*, so they were exposed to the feud: “recipit,” says Tacitus of the former, “universa domus.”³ Accident, moreover, was no excuse; a mere bit of carelessness might lead to the death of a dozen innocent relatives of the innocent cause of feud. The famous myth of Balder shows this stern doctrine that accident, so far as the blood-feud is concerned, must be reckoned one with crime. Blind Hǫdhr is innocent, in our eyes, of his brother’s death;⁴ but the

¹ In the Diet of Worms, 1495. See Arnold, *Deutsche Urzeit*, p. 342. But the *Fehde* of German nobles in the middle ages was not the same thing as the older feud, the former being a sort of armed law-suit. For Anglo-Saxon feud and composition, see Kemble, *Saxons*, I. Chap. X.

² *Saxons*,¹ I. 235. *Béow.* 2884 ff.

³ *Germ.* XXI.

⁴ Loki puts in his hand the fatal mistletoe twig, and bids him cast it in sport at Balder.

avenger, Wali, by the usual Germanic vow,¹ neither washes himself nor combs his hair till he has killed Hqðhr. Beda tells a story of an Anglo-Saxon warrior who was left for dead upon the battle-field, came to life, and was captured by the enemy. Fearing death if he made himself known, he said he was a poor rustic; but when the "count" who held him prisoner, amazed at certain miraculous circumstances, asked him who he really was, and promised him his life, the warrior confessed all. "Thou art worthy of of death," answers the king, "*because all my brothers and relatives fell in that battle*;"² nevertheless, for my vow's sake, I will not kill thee."

When this wide swath of injustice is considered, the single case of a combatant in the trial by battle seems justice itself, — though trial by battle is only a circumscribed and legalized feud. Compare the Icelandic *holmgang*, or duel, with the wholesale murders of a feud like that described in the *Njalssaga*. Similarly, the other forms of ordeal seem absurd; not, however, if we regard them as the institution of men who began to see that right was better than might, and believed that God would defend the innocent and confound the guilty. J. Grimm, in his account³ of the ordeal, assumes that only the nobler phase of it, trial by battle, was a frequent form of justice for the freeman; though both ordeal and duel strike their

¹ So (*Germ. XXXI.*) among the Chatti, where the custom of letting beard and hair grow till one has killed his man, is not confined to special feuds, but is universal. After a great victory over the Romans, Civilis "laid aside his hair," — "*barbaro voto . . . propexum rutilatumque crinem . . . deposuit.*" Tac. *Hist.* IV. 61.

² See Bædæ *Hist. Ecc.*, ed. Holder, IV. 22. "Quia omnes fratres et cognati mei in illa sunt pugna interemti."

³ *R. A.* 908-937.

roots deep into our heathen antiquity. Divination and lots were also regarded as an ordeal, and expressed the will of the gods.

Trial by battle was known by the Germans of Tacitus, and was regarded as an appeal to higher powers. He mentions¹ the strange custom of deciding the event of battle by a duel fought between some captive of the enemy and a representative of the home army; the result of this duel was accepted as an infallible sign of the greater issue. Champions, too, might fight for their respective armies, — like the Horatii and Curiatii. The Norse duel, mostly to decide a personal quarrel, was fought on a holm, or island, and hence called *hólmgánger*. The sagas tell of many a holmgang; that of Gunnlaug Snake-Tongue and Hrafn, which resulted in the death of both, caused the Icelanders to abolish such duels as judicial process. An early case of combat for a lady's honor is mentioned by Paul the Deacon.² Queen Gundiperga is accused of infidelity to her husband. One of her own slaves, named Carellus, receives permission from the king to defend the honor of Gundiperga against her accuser. The duel takes place before all the people, and the queen is vindicated.

Such were the slow steps of rationalism as it won inch by inch the territory of barbarous instinct and superstitions. But the old customs died hard. Nobler souls long looked on all these compromises and compositions as degrading, and held blood to be far better than gold. "I will not carry my son in my purse!" says an old Norseman as he spurns the prof-

¹ *Germ.* X.

² IV. 47.

ferred satisfaction. In the *Nialssaga*, old Nial is told that he too, as well as his wife, may leave the burning house where his sons have been surrounded by their enemies. "No," he answers, "I am an old man, unable to avenge my sons; and I will not live in disgrace."

As a feud involved the family, it is clear that something besides mere pride swelled the breast of a father who counted his row of stalwart sons: it was an assurance of present and future weal.¹ No feud could be lightly undertaken against a powerful and numerous family. Probably the average Germanic brood was no smaller than in barren Iceland; and there we read of such people as Hrut Herjolfson and his two wives, who had sixteen boys and ten girls. "When, in his old age, at the summer assembly of the people, he appeared surrounded by fourteen sturdy sons, he was the subject of numerous congratulations,"²—and no wonder. To lose one of these stalwart sons was a very serious thing for the Germanic father.

Over wife and child, and every member of his family, bond or free, the German had, in theory, an absolute control. But religion and custom, what Tacitus calls the *boni mores*, set up certain restrictions which gradually hardened from tradition into law. To sell wife and child was a last resort of the Frisians.³ The Anglo-Saxon laws, and even the church, recognized a sort of right which parents had to sell their children into servitude, but endeavored

¹ "Quanto maior affinium numerus, tanto gratiosior senectus," *Germ.* XX.

² Weinhold, *Altnord. Leben*, 259.

³ Tac. *Ann.* IV. 72.

to curb the practice.¹ To slay outright an able-bodied member of one's household may have been lawful, but, except in the case of punishment or defence, was doubtless rarely exercised. There would be a wholesome fear of the anger that the spirit of such a slain relative would feel towards the murderer and his kin. At last, individual freedom of every sort yielded to the waxing authority of the king, and his laws limited the power of husband and father; the state took up the old territory of kin and clan. All, however, was done by slow approaches.

According to old Jutland laws, a man was permitted to strike wife and child, provided he did it with a staff or a rod, *and broke no bones*.² Grimm reminds us of Siegfried's theory and practice:—

So women should be managed, said Siegfried, man of main,
That from pert and haughty sayings they ever should refrain;

and afterwards his wife bears testimony, as follows:—

Much have I rued my error, said Kriemhild furthermore,
Since for its sake my husband has beaten me full sore.³

Corporal chastisement, even of adult members of the household, was extremely common, lingered through the middle ages, and under the head of "Wife-Beating" is still a favorite topic with them that make or read the newspaper. "As late as the seventeenth century in France," says Kemble,⁴ "it appears that it was usual to flog the valets, pages, and maids in noble houses." Mention is made of "a riot which arose in Paris from a woman's being whipped to death

¹ Kemble, *Saxons*, I. 199.

³ *N. L.* 805, 837.

² *R. A.* 450.

⁴ *Saxons*, I. 209.

by her mistress in August, 1651." Queen Elizabeth, we know, was wont to beat her maids of honor black and blue. Of course, the Germanic wife did not venture, any more than her children, to lift a hand against her husband. In Iceland, however, women achieved a remarkable degree of independence, and Weinhold gives an instance where a wife, openly declaring that her husband had dared to whip her, thereupon dissolved the partnership and left him, taking all her fortune with her.¹ On the part of the wife, direct and heavy insult aimed at her husband, — acute symptoms, we may say, of the common scold, — conspiracy against his life, and, above all, adultery, were just occasion for her immediate death; only the husband was obliged to kill her openly, and to announce his act immediately to his neighbors. It was mainly the efforts of the church which, little by little, secured to the wife rights of person, if not of property, nearly equal to those of her husband.

In general, it is safe to say that able-bodied persons were seldom killed through the exercise of paternal power. But there is no doubt whatever in regard to the custom of exposure,² applied to the very old and the very young. Life was hard in those days, and daily bread was often uncertain; strong hands must pay for well-fed bodies. The weak and sickly and old were more than superfluous; they were a burden. Remorseless logic pointed to a speedy relief. Particularly infants, whether by reason of some deformity, or, as in the case of girls, because they were not wanted in the family, — little

¹ Weinhold, *Altnord. Leben*, p. 250.

² "Exposition," Gibbon calls it.

Florence Dombeys, — were killed or exposed or, in milder act, sold into slavery. Even the mere fact that a new-born child was a girl often sealed its fate; male offspring counted so much more in the struggle for existence. Mild survival of this is the traditional law at Nestenbach, that the father of a new-born boy has the right to two wagon-loads of wood from the common forest, but only one load if the baby is a girl.¹ Legend and poetry often veiled the old and barbarous and cruelly practical custom, as in the case where some dream or warning causes the parents to expose the new-born infant, and so avert a calamity which it is fated to bring upon the race. The poetry of all nations is full of this. A rich Iclander, Thorstein, just before the birth of his child, dreams that he rears in his house a beautiful swan. Two eagles come and fight fiercely for the swan, and at last fall, both of them, dead to the ground, and the swan sits sorrowful and mourns. Then came yet another bird, and with him Thorstein's swan flew away. A Norwegian skipper interprets Thorstein's dream in the obvious fashion; and when the latter rides off to the assembly of the people, he tells his wife that if she gives birth to a girl, it is not to be reared, but exposed. The wife contrives that her little daughter shall find a home with one of her relatives; and Thorstein's caution proves, as usual, only a vain struggle against fate. His dream is fulfilled; for Hrafn and Gunnlaug, the eagles of the dream, fell in that holmgang already mentioned.² Thorstein, though a rich man and able to rear a dozen children, excited by his action no more sur-

¹ *R. A.* 403.

prise than that which modern folk feel over some unusual piece of economy on the part of a wealthy neighbor.¹

When a Germanic child was born,² it lay on the floor (*barn er á gólfi*, "the bairn is on the floor," that is, "is born") until the father decided whether it should be acknowledged as a member of his family, or whether it should be exposed. In the first case, he *lifted it up*, or caused some one else³ to lift it up; it was sprinkled with water, had a bit of honey smeared on its lips, and so became a human child, a member of the family and clan, no longer — save in such exceptional cases as a general famine — liable to exposure. This act of lifting up is synonymous with fatherhood itself; and Saxo Grammaticus, speaking of a certain man's child, does not say "whom he had begotten," but "whom he had taken up," — *quem sustulerat*. Deformed children were not taken up, but promptly exposed, — in oldest times killed, — in the feeling that such lives were not worth living, quite aside from the burden entailed upon those who would support them. This exposing was the business of the father, although, as Grimm points out,⁴ the legends soften down the barbarity of the act by attributing it to those who have no direct author-

¹ It is needless to remind the reader, save in merest allusion, how universal was this custom of exposure among all the nations of old. Romulus and Remus, Ædipus, stories of the East, the flotsam and jetsam of literature drifting down the centuries and still claiming our tears in the sympathetic verse of Chaucer, — a book would be needed to name them all.

² *R. A.* 455.

³ The nurse; hence, says Wackernagel *Kl. Schr.* I. 12, the German *Hebamme*. Kluge, *Etym. Dict.*, s.v. Cf. Danish *iordemoder*, "earth-mother."

⁴ *R. A.* 456.

ity, like that family scapegoat, the stepmother. Girls, as we saw, were often unwelcome guests; and a curious superstition was often fatal to twins, for these, men fabled, could not both be legitimate children. This superstition forms a basis for the mediæval legend of *Octavian*.¹ The exposure itself took place mostly under a tree or in a rude boat that was given to the waves.² There seems to have been a vague notion that if the gods had any destiny in store for the infant, they might see to its safety for themselves; or else, the child passed for a sort of sacrifice. The feelings of the child were not considered at all. Grimm quotes a passage from *Gudrun*, where children are forbidden to cry and weep aloud, on penalty of being drowned. It is a rough shock to sentiment when we think that this old and hopeless piece of barbarism lies at the foundation of our most exquisite myths,—Lohengrin the swan-knight, Arthur the forest-foundling, and that mystic Scild who in the prelude of our national epic, *Béowulf*, drifts in his boat, a child of destiny, to the shores of a kingless land.

The right to expose a child ceased in ordinary cases if food of any sort, especially milk or honey,³ had passed its lips. There is a legend of the mother of St. Liudger, which shows the old Frisian custom.⁴ She was to have been drowned immediately after her birth, because she was “only a girl.” A neighbor woman, coming by and taking pity on the infant, put

¹ There are English versions, one from the fourteenth century.

² *R. A.* 459.

³ *R. A.* 457.

⁴ Her name was Liafburg. The story is told in the *Vita Liudgeri*, quoted at some length by Richthofen, *Friesische Rechtsgeschichte*, II. 406 f.

some honey on the child's mouth. The honey was promptly swallowed, and in accordance with custom the baby was allowed to live. Tests were often practised in the case of boys to see whether there was promise of a vigorous life. Thus even for the water baptism, if we may so style it, Holtzmann¹ takes the very practical view that it was really a trial of hardiness. If the boy stood the shock of immersion, he had a strong constitution. The old Vikings thrust a spear toward the child as it lay on the floor, and if the little fist clutched at the weapon, good: the child should live and be a man of his hands. The same *motif* has crept into a legend of the Lombards, and is told in all seriousness by Paul the Deacon, in his history of that race.² Once upon a time, he tells us, a woman threw her seven little children into a pond, to let them drown there. It chanced that King Agelmund rode by the pond, and seeing to his astonishment the wretched infants, he stopped his horse and reached out towards them with his spear; one of them grasped it. Agelmund, moved with pity and wonder, said the child would one day be a powerful man, ordered him taken from the pond, had him carefully nursed and educated, and called him Lamissio.³ When Agelmund died, Lamissio was made king of the Lombards. Somewhat different was the test of hardiness where a poor freedman died and left several children. They were put together in a pit — this is not precisely comfortable reading — and were suffered to starve one by one to death: he who held out long-

¹ *Germ. Alterth.* p. 212.

² I. 15.

³ From the word *lama*, a pond, explains Paul. It is our word *loam*, slime.

est was taken up *in extremis* and allowed to live on the score of his tough constitution.¹

The cruel custom of exposure yielded but slowly to the pressure of civilization and the teachings of the church. As helpful as anything was the instinct of maternal pity and devotion and love, which counted more and more as the position of women was improved. Grimm² quotes from a Danish ballad, where a mother puts her baby in a chest, lays with it consecrated salt and candles, and goes to the water-side.

Thither she goes along the strand
And pushes the chest so far from land,
Casts the chest so far from shore :
"To Christ the Mighty I give thee o'er ;
To the mighty Christ I surrender thee,
For thou hast no longer a mother in me."

Imperial laws took the merciful side. The Emperor Valentinian issued an edict against what Gibbon calls the "exposition of new-born infants."³ But nothing clings to life like an old and once universal custom. When the popular assembly of Iceland resolved to accept the Christian faith, the outvoted minority submitted to be baptized on condition that they might keep the right to expose their children, as well as the privilege of eating horse-flesh. Evidently the ceremony of naming a child, a sort of baptism, had much importance in the heathen ritual ; witness the sullen comment of Clovis, the Frank, when his child died within a week after its baptism

¹ R. A. 461.

² R. A. 457, 459.

³ *Decline and Fall*, Chap. XXV.

by Christian rites: "Had it been consecrated (*dictatus*) in the name of my gods, it would have lived; but now because it was baptized in the name of your god, it could not live at all."¹

Elaborate was the ceremony of naming a Germanic infant; and with the naming went a gift. The young Norse hero wanders silent and nameless till he meets the Valkyria Svava, in the forest, and she hails him and calls him Helgi. Then Helgi answers: "What gift wilt thou give me with this name of Helgi?" Whereupon she tells him how he can find a wonderful sword.² Simrock says³ that a present was demanded even when one in after life received a nickname. Woden unwittingly gives a sort of nickname to a tribe of men ("Langobardi"), — it is a Hera-like trick of his wife, Frea, — and so is forced to give them, along with the name, victory over their enemies. Another gift came by right to the Scandinavian child when it cut its first tooth; and this custom also, thinks Jacob Grimm, rests upon old Germanic tradition.

The name itself was not so distinct and individual an affair as it is now; for the main thing then was to attach the new-born child to his proper clan and make him a member of that organization which meant so infinitely much for our ancestors. This name, which bound its owner to his family, was chosen with especial care. It will be remembered that the habit of fastening a general name on the descendants of one man, and then giving each individual a distin-

³ *Mythol.* p. 595.

guishing "Christian" name, was unknown to the Germans, and indeed begins to be a settled custom only with the twelfth century.¹ Not additions to the family name, but variations of it, made the Germanic rule. Hildebrand names his son Hathubrand, — that is one sort of variation. Somewhat different are the cases where "the mother was called Ada, the daughter Oda (Uota); the mother Adalhilt, the daughter Uodalhilt; the mother Baba, the daughter Buoba." Still another variation meets us in a rhyme like Haukr and Gaukr.² We have already seen the first of these systems of name-giving in the Tacitean divisions of the Germanic race, — the tribes Ingævones, Istævones, Irminones (for Herminones), descended from three brothers; in the gods (W) Odin, Wili, Wê; and one could add a long list, — Thusnelda and Thumelicus, Vannius and Vangio,³ and so on. Patronymic names in *-ing* are of course very common in Anglo-Saxon. By their aid, and with the ending *-hâm* or *-tûn* we trace back many an English town to the head of a single family.⁴ For the deeper question about these names, their meaning and purpose, Scherer⁵ has made the following general statement. The names that the primitive German gave to his boy or girl "were for the most part like the names of Catholic saints, who are given to the children as patrons and protectors; these German names betokened patterns of life, ideals, which must be followed and imitated." Often the name was a compound of two members;

⁴ See Kemble's valuable lists, *Saxons*, I. 459 ff.

⁵ *G. D. L.* 10 f.

and as in Aryan times, one of these members was often used alone as a pet or household name. Favorite compounds were such as *Gerhard*, the spear-bold man,¹ or *Gertrude* (*Gér-druð*), "the spear-strong," applied to one of Woden's battle-maidens.² "In general," says Scherer, "the names of men in the Germanic period expressed the qualities which make for success in the great battle of life,—wisdom, strength, courage, readiness with weapons, power, leadership, passionate and determined purpose. All pointed to struggle or conquest." Among the names of women, however, Scherer sees two sharply sundered groups. One set of names had as basis the qualities of peaceful life, love, faithfulness, good cheer, beauty, grace, reminding us of nymph and dryad, of the light mist upon lake or meadow. The other group had names of battle and warfare, like *Brünhild*, "she who fights in armor." Whether the brilliant historian is right in assigning the respective origins of these groups to two distinct periods, one of which cherished peace as its ideal, the other delighting in war and bloodshed alone, is a question still open to debate. There can be no doubt, however, that at the time now under consideration the warlike principle prevailed in overwhelming degree. "She sat at home and span" was the coveted epitaph of the Roman matron; but the mother or wife of German warriors went with them to battle and once, perhaps, bore shield and weapon at their side.

Mythology, too, as Müllenhoff points out, played

¹ The Danes in *Béowulf* call themselves *Gårdene*, "Spear-Danes."

² For details, see reference above, and also Weinhold, *Deutsche Frauen*, p. 11 ff.

its part in Germanic names;¹ and not inactive was the influence of heroic legend. Just as the patriot of some decades ago named his son after one of the revolutionary heroes, so a Germanic lad might receive the name of a Siegfried, a Gunther, a Welant.²

The early life of the Germanic child was passed in the narrow range of his paternal household; rich and poor alike grew up together, unclad and dirty, an ideal childhood.³ So lived the son of the freeman until the time when, in presence of the popular assembly, after judgment had been passed upon his fitness, he took spear and shield and became a member of the state. A somewhat romantic tale of Paul the Deacon, about Alboin (the Ælfwine of our own poem, *Widsid*) and his youthful bravery, asserts that Alboin, while yet a prince, in battle with the Gepidæ, killed their king's son in single combat. The warriors of Alboin thereupon begged his father, the king, that he would admit the youthful hero to the royal table. "No," answered the king; "you know our custom that a king's son may not sit at meat with his father till he has received gifts of arms from some other king."⁴ This gift of arms, whether so intricate a ceremony as here, or the everyday occurrence of a German community, was the all-important moment of the freeman's life. For arms were the sign of his freedom. "They go about no business," declares Tacitus of his Germans, "either public or private,

³ "Nudi ac sordidi," Tac. *Germ.* XX.

⁴ *Paul. Diac.* I. 23. What follows (24) is a strained account of Germanic hospitality. Young Alboin goes as guest to the king whose son he has slain, and asks the latter's arms as gift.

unless armed. But no one is allowed to take arms to himself until the state (*civitas*) is satisfied that he knows how to use them. Then in the public assembly, either one of the princes, or the father, or a relative, adorns him with shield and spear. That is with them the *toga* and the first honor of youth; until this occasion he is reckoned of the household, but not of the state.”¹ Later law and custom ordain that at seven years of age a boy is taken from the control of the women and begins his education among men. At eight, with many tribes, he had a *wergild*. To prove his fitness, says tradition, an apple and a bit of money were placed before him: if he grasped at the apple, he was not worth reckoning; if at the money, he was worth half the *wergild* of a man.² At ten years an Anglo-Saxon youth seems, under two codes of law, to have become free of his guardian,³ so far as the latter’s hold on the former’s property was concerned; and among the West-Goths a youth of ten, if he fell sick, could dispose of his estate.⁴ Other Anglo-Saxon laws fix twelve years for such responsibilities; and this is legal age in other places. At fifteen, others were thought ready to bear weapons,—an age which agrees better with our notions of fitness; and eighteen, and even twenty-one, have judicial sanction.

From such a time till old age reduced his strength, the freeman was active member of the state, bore arms, took part in council, had the duties of fighting and the privileges of idleness, and was thus distinguished from the unfree. In education, says Tacitus,

¹ Tac. *Germ.* XIII.

³ *Ibid.* 413. Schmid, p. 12.

⁴ *R. A.* 414.

there was no distinction. A playmate in boyhood could be the slave of riper years. Weinhold thinks that boys were often sent to other households for purposes of general education, — mostly to a relative;¹ but this is only a guess. Certainly there was nothing in the nature of our modern schooling with book and pen; a robust contempt for this business of monks and women held strong throughout the middle ages, and was doubtless based on a genuine old Germanic sentiment, — latent, of course, in the absence of an alphabet. But it was otherwise with the education of muscle, agility, courage. Look, for example, at the accomplishments of our Jarl in the *Rîgsmâl*.² Gymnastics of some sort our forefathers undoubtedly practised; witness their sword-dance. This was education and sport, task and theatre, combined.³ The young men of free rank carried out the dance and had charge of it; they were clad as in battle, naked to the waist, with sword, or *framea*,⁴ in the hand. Then they leaped or threw themselves about, among or under the quivering, flashing swords. Müllenhoff assumes⁵ that this was done to a musical accompaniment; “from the start, Germans knew fife, horn, and probably a sort of drum.” Something of the same sort, though performed in full armor, was the Pyrrhic dance of the Greeks, in which all motions and postures of combat were imitated, and the whole

⁵ p. 117.

affair was made into a training-school for actual warfare. There was a similar Italian dance. Our Germanic tongue made little difference between "play" or "dance," and "fight"; both were expressed by the word *lâc*, of which our discredited "lark" or "larking" is lineal descendant. Among the many "kennings" for "battle," derivations of this *lâc* are beloved metaphors: "sword-lark," "warriors'-lark," "shield-lark"; or else the compound is with *plega*, "play": "spear-play," "sword-play," "linden-play" (*sc.* of the shield), and many more.

Such an education might well lead up to a vigorous manhood and, by our reckoning, to a green old age. But the second childhood of a German had all the risks of his first; exposure was as common a fate for the graybeard as for the infant. "Old age," cries Lear bitterly enough, "is unnecessary"; but the ancients came to this conclusion without any such cruel tuition as his. "The young tree," says the hero of a legend told by Saxo Grammaticus, "is to be nourished; the old tree should be hewn down";¹ and the phrase is characteristic. For not as a gentle messenger, an "angel," not as the softly approaching genius with inverted torch, beckoning the soul, or "standing pensively, his hand lifted to his cheek," did death come to the German;² it charged full upon him, a relentless warrior. The Germanic conception of death was neither the comely youth, twin-brother of sleep and son of night, as the Greeks represented him,³ nor yet the repulsive

¹ *Arbor alenda recens; vetus excidendâ.* ² Grimm, *D. M.* 709.

³ Lessing, *Wie die Alten den Tod gebildet*, Berlin, 1769, p. 5 f. Death carved to resemble an Amor, see p. 10 f.

skeleton of our mediæval traditions;¹ death, mostly personified by the Germans as "Battle," or the like, seized each man and bore him away. "If Hild (Battle) shall *take* me," says B owulf, thinking of his possible death. Germanic life was all struggle, stress, battle; and death was only the hardest out of many buffets. All races, says Victor Hehn, in a certain stage of the development of reflection come to the notion that death is no great evil;² and he quotes the famous story told by Herodotus about a Thracian tribe who wept when a man was born and rejoiced at the death which set him free from reach of human ills. Probably we pity those gray-haired victims of exposure more than they pitied themselves; and they could have echoed in all simplicity, so far as old age was concerned, the words of the Preacher who praised the dead that were already dead more than the living which were yet alive.³ We must be careful, however, not to slip any poetry into the other side of the account. The German did not philosophize very much; the stolid fashion of a peasant, face to face with death, gives us a better hint. It was not a sentiment that old and tired should die; it was a custom. Still, a rough sentiment often moulds our habit, and those weary veterans of life may well have said with the Greek poet that old age is intolerable and hated even by the gods; while they were not modern enough to join Lear in his magnificent appeal for sympathy: "O heavens, *if you do love old men, . . . if yourselves are old, . . . send down and take my part!*"

¹ J. E. Wessely (*Die Gestalt des Todes und des Teufels in der darstellenden Kunst*, Leipzig, 1876) gives abundant details.

² Work quoted, p. 438.

³ *Ecclesiastes*, IV. 2.

The prime and best of life, so reckoned the ancients, lay for men in the period from twenty to fifty, and for women from fifteen to forty, — of course, a rough average. These particular figures apply to the West-Goths,¹ but would doubtless hit the Germanic notion as a whole. Sign of one's abiding manhood was the power to mount and back a horse, swing sword, and walk without staff or other help.² Three-score-and-ten is the biblical limit of strength; but as among the Romans, sixty years were enough to bow the Germanic frame.

Now while these years of strength endured, it was good for the German to live; he had no doubts about that. Life was sweet to him who had all powers of mind and body, and a fair share of good fortune. The primitive and irresistible logic of it is charmingly expressed in one of Chaucer's happiest bits of humor, where Arcite is thrown from his horse and mortally hurt just after the tournament in which he has won his peerless bride: —

“Why woldestow³ be deed,” thise wommen crye,
 “And haddest gold ynowgh, and Emelye?”

But when the senses were dulled, strength waning, disease and pain getting upper hand, there came to the German, not our modern weariness of life, which is often found in very strapping young gentlemen, but a willingness to leave the useless abode, to pass into the next world, to try one's chances in that region

¹ *R. A.* 416.

² *Ibid.* The German laws required that one could walk in the common highway “ungehabet und ungestabt.” *R. A.* 96. Later, a woman's test of general ability was her power to walk to church.

³ “Wouldst thou.” See *Cant. Tales (Knight's Tale)*, v. 2836 f.

of spirits whose existence no one seriously doubted. Let us hear the conclusion of the whole matter of Germanic life from one of the older Scandinavians:¹ "I have slain this Tusk-gnasher, first of the fourth ten (*i.e.* he is the thirty-first I have slain). . . . I have cut down thirty-five men as quarry for the black-feathered raven. I have got me a name for manslaying. May the fiends take me when I am no longer able to wield my sword! Let men bear me into my barrow then; the sooner the better." Another sings of old age: "I grope in blindness round the fire. There is a cloud on my eyes. This is the ill that sits upon the white fields of my brows. My gait is tottering. . . . The forest of my head is falling; desire has failed me, and my hearing is dried up."² Such a life had no redeeming features; it was no hard matter to leave it. Moreover, we know the Germanic wish to die in some violent way, not to pine and dwindle into one's grave,—a wish that flames out in the wild "Death Song" of Faust, and hails him happiest who dies in the midst of victory or love:—

O selig Der, dem er im Siegesglanze
Die blut'gen Lorbeern um die Schläfe windet,
Den er nach rasch durchrastem Tanze,
In eines Mädchens Armen findet!

Warriors in Scandinavia gashed themselves with Odin's spear, and so avoided that dreaded "death in the straw."³ The *Gautreks saga* tells of a lofty rock

¹ It is of the heathen period. Translation from Vigfusson and Powell's *C. P. B.* II. 70.

² *C. P. B.* II. 73.

³ Of course, a common barbaric trait. See Ammian. Marc. 31, II. 22, for the sentiment of the Alans; those who lived to old age, or died of sickness, were treated with contempt.

whence those who were weary of life were wont to cast themselves down; a case is mentioned where father and mother, led by their children to the cliff, leaped "glad and joyful to Odin."¹ On the other hand, there was plenty of involuntary faring to Odin, — or to the mistress of the cheerless world. Says Ari the Icelander: "There was a great winter of famine in Iceland in the heathen days, at the time that King Harold Grayfell fell, when Earl Hakon took the rule in Norway. It was the worst of famines in Iceland. Men ate ravens and foxes, and much that was not meet for food was eaten, and some slew old folks and paupers, hurling them over the cliffs into the sea. . . ." ² It is related that a formal motion was made and carried in the Icelandic assembly, that on account of the famine and cold, all the old, the sick, and the infirm should be abandoned to starvation.³ The ancient Prussians and Lithuanians killed their useless old people without scruple; while worn-out servants, sickly children, beggars not "sturdy," and such persons, shared a similar fate. Certain tribes of the Gothic race killed their old and sick, — this in the sixth century.⁴ Beda, in telling about the conversion of Sussex, mentions the poverty of the place, and the ignorance and superstition of the inhabitants, who in time of famine would flock to the shore of the sea, and, forty or fifty together, *junctis misere manibus*, leap into the waves.⁵ Survivals abound. Grimm

¹ R. A. 486. ² Vigfusson-Powell, *C. P. B.* II. 35. ³ R. A. 487.

⁴ Grimm, *Kl. Schr.* II. 241; Procop. *d. bell. Goth.* II. 14. It is worth noting that "though relatives kindled the funeral-pile, a stranger was employed to give the death-wound."

⁵ Bæd. *Hist. Ecc. Gent. Angl.* IV. 13. The custom is well established for the ancient Hindus, as well as for a host of modern barbarians; it was doubtless a general Aryan habit.

quotes an old English tradition of "the holy mawle, which they fancy hung behind the church door, which, when the father was seaventie, the son might fetch to knock the father in the head as effete and of no more use." Long after the "mawle" ceased to be used, the tradition remained.¹ In poetry and legend we find the same sort of survival. A single example, perhaps a little strained and rhetorical, may be taken from the German *Wunderhorn*.² A boy carries part of an old horse-blanket to his aged grandfather, who is kept in abject misery, shivering and starving in an outhouse. "Why the blanket?" asks the father, meeting the boy. Then the boy answers:—

I take the half, he said,
Unto thy father's bed.

The other half I keep
For thee, when thou shalt lie
Where now thy aged father
Is thrust away to die.

Against this treatment of the aged seems to stand in sharpest contradiction the well-known reverence for gray hairs and the wisdom that they brought, the piety and veneration for old age, which we find in all the writers of antiquity. Not only Nestor of the Homeric poems, but the sentiment lying behind words like *presbyter*, or the Anglo-Saxon *ealdormonn*, or our epic phrase *frôd and gôd*, a sort of hendiadys expressing the fortitude and experience of mature years,—these are good witnesses. But there is no great contradiction. The latter sentiment applied originally

¹ Grimm, *Kl. Schr.* VII. 175, quoting W. J. Thoms in a work edited for the Camden Society, 1839.

² *Das vierte Gebot.*

to a healthy, vigorous old age, the wisdom of sagacious counsel still fortified by a sound body. Whatever, on the other hand, bore the visible mark of death, the palsied frame, the sightless face, was abhorrent and unclean; and this was what the heathen hastened to put out of sight. As the feeling of respect for old age in and for itself gained ground, the early prejudice grew weaker; in this, Sir Henry Maine¹ sees one of the chief signs of advancing civilization.

¹ *Early Law and Custom*, p. 23.

CHAPTER VII

TRADE AND COMMERCE

Household industries — The smith — Commerce — Exports — Amber — Myths relating to commerce and seafaring — Ships — Love of the sea — Money and bargains.

ASKING the free-born primitive German what trades he had, we feel sure that if he could “speak back,” it would be with a choice array of primitive German abuse. He was a soldier, he. His women and his slaves carried on nearly all of his industries. Among these, weaving would take a prominent place; for the Germans had known the art and practised it long before they came in contact with the south.¹ That “white cloth” of divination, mentioned in the *Germania*, upon which the priest cast the kevels and read the runes — if runes they were — was doubtless of home manufacture. Their linen they exported, and it fetched a good price; while the dresses of German women were preferably of the same material.² “Linen as popular garb,” says Hehn, “is of northern (*i.e.* not Roman or oriental) origin.”³ In the Scan-

¹ Evidence of the making of woollen cloth is found in graves of the early bronze period in Scandinavia; and towards the close (several hundred years before our era) of that age, linen makes its appearance. Kålund in Paul's *Grdrs.* II. 2. 210.

² Tac. *Germ.* XVII.

³ Work quoted, p. 149.

dinavian lands, linen served in the place of money. Of industries which are somewhat allied to weaving, and supply the family needs, we may mention soap-making, another old Germanic art. Leather tanned with the aid of bark gave shoes; while the sinews of cattle and the fibre of the linden tree furnished cords and ropes. All this was household work, and so remained far into the middle ages. That reproach still clings to the trades of the tailor and the shoemaker, and is due to the old association with labor done only by women or slaves. Earthenware must have been made,¹ and came under the same category.

But there was a craft well worthy of the freeman and one that lay close to the heart of Germanic life, — the craft of the smith, a noble art, held high by all warrior races. “Smith,” of course, is the same as Latin *faber*; and we remember that in the *Rîgsmál*, one of the sons of Karl, the freeman, is named Smith, the artisan. “Smith” is the masculine pendant to *webbe*, the woman who weaves, later *webster*. Just as in Anglo-Saxon, a wife, by the kenning already quoted, was called weaver-of-peace, so the word “smith” was used to form compounds in the sense of “one who causes or makes.” Thus we have “lore-smith” (*lârsmið*) for learned men, “laughter-smith” for him who makes laughter or fun, and “war-smith” (*wîgsmið*) for the warrior.² This general meaning of *faber* or artisan was slightly broadened in Scandinavian, and narrowed in Anglo-Saxon. In Old Norse, as Grimm reminds us,³ it meant not so much “work-

¹ Tac. *Germ.* V.

² Bode, *Kenningar i. d. ags. Dicht.* p. 48.

³ *D. M.* 453.

man," as one skilled in the arts generally, particularly the master-builder. In Anglo-Saxon it refers to the worker in metals, while the still common "wright" (*wyrhta*) was he who wrought in wood of all sorts, ship or wagon or house.¹

Like Vulcan of old, the Germanic smith found his way into mythology and cult. In England we know him as Wayland the Smith;² and our oldest English lyric, the song of the minstrel Deor, introduces him in its first verse. His legend or myth was a great Germanic favorite; in the north it is elaborated into one of the most striking poems,³ and allusions to it are frequent even in the scanty wreckage from the literature of our forefathers. Various accounts made Weland grandson of a king and a mermaid, and son of a giant,—by no means a born thrall; and his deeds are deeds of a god. The legends of Weland seem to have begun in Low German territory; and when both Béowulf and Waldere, in our early epic, call their swords "Wayland's work," we know that this is praise indeed.⁴ A later version of the Siegfried legend makes that splendid hero, the Germanic Achilles, learn the art of a smith.⁵

Manifold, even in that simple life, were the products of this craft. Tools, to begin with, must be

¹ In Wright-Wülker, *Glossaries*, Col. 272, the heading "Incipit de metallis" covers *smið* = faber, *smiððe* = officina; while in Col. 112 there is a list of wrights. However, "Latomus" is *stanwyrhta*.

² His cave is pointed out in Berkshire. Scott's treatment of Wayland in *Kenilworth* is hardly fair, though that other smith, Henry Gow in *The Fair Maid of Perth*, has a more heroic role.

³ Charminglly told in the translation of the Grimms (Berlin, 1815, 1885), or in Vigfusson-Powell, *C. P. B.* I. 169.

⁵ Wackernagel, *Kl. Schr.* I. 47.

made; and with these tools were fashioned the rough instruments of farming life, the houses and their scant furniture, the wagon — such as that of the goddess Nerthus, — and above all the ornaments, the drinking-horns, and the weapons.¹ Of course with the passage from age of bronze to age of iron, the smith's art increased in its variety if not in its importance, and with iron, brass, silver, lead, and glass came into consideration.² Probably, as is so often the case with conquering tribes, the Germans learned the finer shades of this craft from captives of a more civilized but less warlike race. The Celts are the most obvious teachers of manual training for the Germans, though Roman examples must be reckoned with. Warriors often made their own weapons;³ and as in modern days, some leader doubtless saw from time to time the chance to improve his warriors' weapons, and so introduced reforms. A recent African instance may be quoted; the chieftain of a certain tribe made a considerable change in the character and use of his people's favorite arm, and in consequence subjugated a number of neighbor tribes who depended on the older weapon. The forging of iron weapons became general for Germany in the times of the wandering; but tradition and fair evidence⁴ would seem to make the beginnings of the industry far older than contact with Rome. Nomadic tribes have often been good weapon-smiths. In later times, the Vandals and the Lombards had high repu-

¹ Wackernagel, *Kl. Schr.* I. 44 f. ² Montelius, work quoted, p. 89.

³ *Ibid.* p. 172.

⁴ Tac. *Germ.* VI.: "Even iron is not abundant (he has mentioned the scarcity of gold and silver), as may be gathered from the character of their weapons. Few use swords. . . ."

tations in this art. A Vandal king elevated to the rank of noble a smith who had especially distinguished himself.¹ The sharp spear-heads of the men who fought so bravely against Drusus and Germanicus, and put Roman military skill to all its shifts, must have made plenty of work for the weapon-smith. The sword is the darling weapon of Germanic song, though it was seldom seen in the hands of the ordinary warrior. It is not the early national weapon, like the short lance; but what a wealth of affection is showered upon it by the later heroic poetry! It is called "the work of giants," "Wayland's work," "the heirloom"; runes were cut upon it; it had will and passion; mystery was about it. It had its pedigree of owners; its fate seemed almost human. What, then, as time went on, and Germanic life came to be all warfare,—what of its maker? Was he not as well paid and as highly held as the Armstrongs or the Krupps of to-day?

Ornaments being so dear to the primitive German, the goldsmith was counted among the "noble" craftsmen. Of great interest to us is the so-called golden horn of Gallehus (Denmark), filched, alas, long ago from the Copenhagen museum, but represented there by an accurate copy in gilded silver. It dates from the fifth century; and the runic inscription upon it shows linguistic forms (in early Norse) older than the Gothic. This inscription, the mark of the Germanic smith, runs as follows: "I Hlégestr, son of Holte (or simply, of Holt), made the horn."² Sev-

¹ Wackernagel, *Kl. Schr.* I. 47.

² It is a Germanic verse, and reads: "Ek hlewagastir holtingar horna tawido." It is in the older runic letters.

eral other products of the goldsmith's industry have been found in Denmark with inscriptions of the same date as that of the golden horn. They surely justify our assumption that even the early Germans not only stole ornaments, but made them. The skill of Wêland in making the most artistic ornaments, such as are detailed in his story, leads us to the same inference.¹

Passing to the general esteem in which our early Germans held the smith, we find that when such a trade was plied by an unfree person, his *wergild* rose very high, the goldsmith's highest of all.² In Anglo-Saxon laws the king's smith is mentioned as an important person.³ When a *gesithcund man*, that is, one of the great persons of the kingdom, moves his residence, the laws of Ine allow him to take with him his reeves (*geréfan*, — *socios suos*), his smith, and his child's nurse.⁴ We hear in another place of a special punishment for injury done to the hand "of the harper, the goldsmith, and the embroideress."⁵

Trade, which has so often opened new countries to the civilized world, found early its way into Germany. True, the account of Cæsar shows little of what we now call commerce; traders, he says, are

¹ The splendid arms of the Cimbrians in Italy, and especially the brazen bull which they carried about with them (Plutarch's *Marius*), are hardly in point. There had been too many opportunities for plunder and trade during their long migrations. But those "images of wild animals taken from the sacred groves," which Tacitus mentions (*Hist.* IV. 22), are better evidence.

² Cf. T. Wright, *Celt, Roman, and Saxon*, p. 486, with references.

³ Schmid, *Ges.* p. 2.

⁴ Schmid, p. 50.

⁵ *Lex Anglor. et Werinor.* tit. V. 20; see Thorpe's Lappenberg, *Anglo-Saxon Kings*, I. 120, Bohn's ed. "Music and the smith's craft," says Wackernagel, *Kl. Schr.* I. 49, with reference to Jubal and Tubal Cain, "are the oldest industries."

admitted among the Germans, but it is mainly that the spoils of war may be disposed of rather than for any lust after imported articles. Especially is the importing of wine forbidden, because the Germans think they are made too soft and effeminate by its use.¹ Moreover, the products of the spinning-wheel soon found their way into a profitable market.

On the whole, however, such commerce as the German knew must have been of a fitful and fragmentary kind. Holtzmann says roundly that a band of robbers has no trade. Again, we know that the German hated cities; and these are of course the result and prop of trade, the local fixing of a market. Still, traders went about among the German tribes; and Baumstark reminds us² of the Germanic hospitality as likely to cover even these isolated merchants. They were probably half-breeds or freedmen. No freeborn German, we may conclude, ever stooped to trade; he fought for his living, although there was much incidental plunder. Tacitus tells us that when no war was near at hand, the adventurous young man took up distant and doubtful quarrels and found fight where he could, — a sort of speculation *à fonds perdus*. Even the plunder of these ceaseless wars made a merchant desirable, and a sense of advantage prompted the German to accord certain rights to a foreign trader.³ Wine, — when not forbidden, as by

¹ Cæs. B. G. IV. 2. This is said of the Suevians. The Ubii, another German tribe, who lived close to the Rhine, admitted traders freely. IV. 3. Roman traders among the Germans are mentioned, e.g. Tac. Hist. IV. 15.

² *Germ.* p. 300.

³ In later times, of course, the king protected merchants. See Alfred's laws, p. 34; "Einleitung," LXIV., and below, p. 288.

Cæsar's Suevi, — ornaments of that flashy character, doubtless, which have always attracted primitive races, and such matters, were coveted property; and it was occasionally good to procure them without fatiguing preliminaries with the legions. Baumstark breaks a lance, in his usual impetuous fashion, for the native German trader, apart from the warriors; and insists that such home merchants bought of the Roman and sold to their remoter countrymen. Tacitus expressly tells us that the interior tribes carry on commerce by barter;¹ while the others use Roman money. We may feel sure that there was considerable trade in salt, the oldest commodity traded from tribe to tribe.²

Germanic exports were slaves, amber, skins, woven stuffs, chiefly linen, soap, goose-feathers, and probably many other articles which had become essential to Roman luxury. The imports were not of a very solid character, for each Germanic household provided its own necessities; in early times iron and its finished products, chiefly weapons, may have made an exception, but a law of the empire wisely forbade the exporting of iron in any shape from Rome into Germany. With no cities to collect and divide labor, the German did considerable part of his own domestic trading at the religious festivals, when scattered members of a clan or confederation of tribes came together to worship a common deity. The fair or *Messe* of to-day represents the old combination of cult and trade, though the latter element alone survives.

¹ "Permutatione mercium utantur." *Germ.* V. See Baumstark, p. 197.

² See Hehn's monograph, quoted above (*Das Salz*).

For the trade with Rome, carried on by that class of half-breeds and nondescripts always found on the border between civilized and uncivilized lands, we may safely assume amber as the oldest and most important staple.¹ The export of amber led to the first communications recorded between the shores of the Baltic and the civilized world about the Mediterranean ;² Greeks, Syrians, and Egyptians knew its use. To the Romans amber was first known as a product of the Baltic coast about the time that Drusus made his great campaign, a few years before the beginning of our era ;³ and it soon became a very popular article in the Roman market. Used by rich and poor,⁴ it was employed not only for charms and amulets, but was recommended by physicians as a potent remedy for disease. Indeed, cheap or "imitation" jewelry was made of it, and it furnished a good counterfeit of certain precious stones, like the topaz. In the time of Nero a Roman knight went to the source of supply, and brought back enough to cover the nets which surrounded the circus, — an enormous freight, with one piece weighing thirteen pounds alone.⁵

The Germans themselves were not blind to the merits of their chief export. Graves of scattered races dotted about the continent, often far from the bit of territory which produced the whole supply, testify to the love of our forefathers for ornaments and charms of amber. Tacitus, it is true, says that the people who gather what in their own tongue they

call *glesum*, a word evidently connected with "glass," do not use it, but export it in the raw state.¹ This, however, does not exclude the use of it by neighboring Germanic tribes. Valuable as this export seemed, there was one article which the Romans sent in exchange to Germany, a shrewd bargain for the north, and worth a wilderness of amber,—the alphabet. The so-called runic alphabet, about which theories of the wildest possible nature have been advocated, is now generally admitted to have been introduced among German tribes about the end of the second century after Christ, and is simply the Roman system of letters, modified by the needs of cutting in stone or wood, and by the inevitable variation of imperfect and distant copies.²

The Germans further exported an unsightly, but tough little breed of horses, not, of course, the wild race referred to above as a part of Germanic food, but such as were trained to the saddle,—that is to say, to military work; "for nothing is held so shameful and effeminate among them as to use the saddle."³ Moreover, a few articles were exported for the Roman table; such were the beets and turnips of which Tiberius was so fond.⁴

All this trading, or nearly all of it, was naturally overland; for from time immemorial there had been a trade-route from the Baltic to the south. Of traf-

fic by water there is not so clear a record,¹ but it reaches back into the realm of myth; and as the smith's art should properly begin with a Germanic Vulcan, so we look for our earliest seafarers to the myths of Scéaf, of Wade, and of Hilde. Leaving aside for the present all myth for myth's sake, we may point to the venerable form of Scéaf as representative of the seafaring instinct in our oldest ancestors, the people who lived along the German Ocean, and on both sides of the Cimbrian peninsula.² Connected with this purely mythical and shadowy but enticing figure are the clearer-outlined forms of Scandinavian Freyr and that earlier Nerthus, goddess of plenty, whom Tacitus has drawn for us. Peace and plenty go with trade; and we are sure enough that Freyr was the merchant-sailor's god, and gave him favoring winds. Of Ing, the founder of our Ingævonic race, we have vague hints of a seafaring proclivity; and the famous swimming-match of Béowulf and Breca, translated above,³ is thought by Müllenhoff to be a myth of the northward progress of culture and trade in the figure of the cult-hero or god making his way through the frozen and unfriendly seas. But these are no new things; the tradition of them reaches back into a dim antiquity. Likewise of primitive Germanic origin, thinks Symons,⁴ is the widespread myth or legend of Hilde, full of the plunge of ocean billows; it found special welcome and cultivation in the Netherlands,⁵ and is the basis of the beautiful German epic *Kudrun*. Again, Wade,⁶ that is "the

⁴ In Paul's *Grdr.* II. 1. 51 ff.

⁵ There is allusion to one of its characters in our oldest English lyric, *Deor*.

⁶ Symons, as above, pp. 11, 55.

wader," originally doubtless a sea-monster of some sort, is the father of our smith Wayland, and is mentioned, along with his boat, by Chaucer.¹ So thoroughly are all these myths and legends mingled with the sights and sounds of ocean, that we are justified in thinking of the Ingævones as a race of seafarers from the most primitive times. One strong proof of this seafaring instinct is found in the burial of Germans in ship-like tombs, or in real boats, and in the universal belief in a spirit-land whither souls are ferried in some ghostly ship.²

Let us now turn from myth to history. As usual, the exaggeration of the former is offset by a most melancholy depreciation in the latter. Pliny and Tacitus tell us of the awkward canoes and the hollowed tree-trunks used along the northern coast of Germany.³ There is a dash of the picturesque in the following story of an eye-witness, the historian Vellejus Paterculus, who served with Tiberius in the German campaigns. The Roman army was encamped upon the Elbe in the very heart of Germany. On one side rose the camp of Rome; the opposite bank glittered with hostile arms, until the imperial ships

¹ *Cant. Tales*, v. 9299, in the Merchant's Tale: "Wades boot (boat)." Müllenhoff in *Haupt's Zst.* VI. 67 ff. comments on this and other mention of Wade.

² See below, p. 326.

³ Holding, we must remember, thirty men or more apiece, and making head against the fleet of Rome. Germans also used captured Roman ships. Back, moreover, of all Roman influences, we find in the rock-pictures of the Scandinavian bronze-age, representations of boats, high in bow and stern, and meant for rowing. In the early iron age boats were built of admirable lines, and calculated for some thirty oars; we should prefer to trust a Northman's judgment of good boats rather than the opinion even of Admiral Pliny. See Kålund in Paul's *Grdr.* II. 2. 210 f.

arrived. About this time an elderly German of fine appearance and, to judge from his arms, of high rank, took boat—a trough-like affair of hollowed wood—and rowed to the middle of the river, asking that he might be permitted to land and gaze upon the Cæsar in all his state. Then follows a wealth of compliment for Tiberius; but as Vellejus was himself present, and as the scene must have been near the mouth of the Elbe, we may without great danger behold in the curious barbarian one of our own forefathers, or a near relative of them, and accept the picture as one among the very few authentic ancestral portraits from that time of which we can boast ownership.¹ From such a boat to the exquisite lines of the Viking ship now preserved at Christiania, and said to be over a thousand years old, is no leap of a decade or so. Still, we may be sure that these Germans of the coast knew in their way as much about boats as the Romans did; and their rough canoes may have been seaworthy enough. The Chauci actually used them on plundering expeditions to the coasts of Gaul. In the third century our Saxons² suddenly appear as accomplished sailors, and their swift keels measure the ways of ocean in all directions,—witness the Saxon shore of Britain, and the long line of fortified points to guard the colony against a tireless foe. These Saxons are said to have learned the art of shipbuilding by the treachery of Carausius.³ Hehn, too, insists that it was only when they had borrowed from neighboring

¹ Vell. II. 107.

³ Lappenberg says he was of Germanic extraction. *Anglo-Saxon Kings*,² I. 57.

people the idea and use of sails that the Saxons were able to play their pirate parts; but not quite so rapidly are sailors made. In the *Germania*,¹ Tacitus describes the Norsemen as ignorant of sails; their boats are two-prowed, and are not arranged with permanent rows of oars. But as oars still remained a prominent feature of the Viking ships, so we are fain to think that even the sailless craft of our Saxon forefathers were at home on the high sea itself, and dared many a bit of piracy with nothing but stout hands to propel as well as man the boat. As time passes, these Saxons achieve a great reputation for their skill and ferocity upon the water. Sidonius Apollinaris describes them in a letter, as well as in one of his poems;² they are perfectly at home upon the stormy sea, and govern their boats in a fashion evidently puzzling to the poet.³

The booty won by these raids can hardly be called merchandise, but it made occasion, and even need, of later traffic. We know that the Scandinavian trade with Ireland began in and even before the Viking period; the influence of Irish art is plainly seen in Norse ornamental work.⁴ Even the Viking raids, that organized system of plunder pure and simple which attained its height about the tenth century, opened, like the crusades, a way for commerce. And let us particularly remember that this Viking instinct lay in the race; its great success came with its great opportunity. The beginnings of it, however, are to be sought in those rudest possible forerunners of

¹ XLIV.

⁴ Montelius, work quoted, p. 136.

modern Red Rovers, — the wretched boats burnt or otherwise hollowed from a tree-trunk, in which the indomitable Chauci faced a Roman fleet (whether these naked desperadoes were any more *prædones*, — it is Pliny's word, — than the imperial visitors themselves, is not at all certain), or the *lintres*, the light canoes assigned to the same neighborhood by Tacitus.¹

Trade, as may be seen, ran fairly abreast of all this plundering, even on the unsatisfactory footing of stolen goods.² There were profits large enough to tempt the daring trader; and does not commerce nearly always begin with its wares in one hand and a sword in the other? It must have been a nice art in those old days to tell a pirate from a peaceful trader or visitor; and the duty of the "strandward" at Hrothgar's chief harbor could have been no sine-cure. Striking is the picture of this coast-guard who rides along the headlands to watch the stretch of sea, and spying the boat of Béowulf, gallops down to meet him at the strand, shakes the long spear, and asks what has brought him and his vassals hither, peace or war: —

What are ye, then, of arméd men,
mailéd folk, who the foaming keel
have urged thus over the ocean ways,
over water-ridges the ringéd prow?³

With the art of oar and sail went the knowledge of the pilot. Such a person guides Béowulf and his

³ *Béow.* 237 ff.

men upon their journey over the sea, and is called a *lagueræftig mon*, "one who knows the waters." With the opening of history we find our forefathers possessed by a passion for voyage and ocean-adventure; it fills their descendants of to-day; and we reasonably infer it in those older ancestors of whom history is silent, and whose deeds waver doubtfully in the mist of legend and tradition. *Die Nordsee ist eine Mordsee*; its first Germanic victim, "long-headed blond" or what not, has had no lack of followers.¹

Lastly, we turn to those figures in which Germanic poetry has expressed its love of the sea, of ship and storm and life upon the waves. As we read the early pages of Grein's collection of Anglo-Saxon poetry, how the monotony is broken when once the fiery singer of "Exodus" fairly comes in sight of the Red Sea; and what wealth of image and trope to describe the triumph of that "hoary warrior," ocean, over the hosts of Pharaoh! No more sympathetic picture has been drawn by an Anglo-Saxon poet than where the wanderer² in exile falls asleep at his oar and dreams again of his dead lord and the old hall and revelry and joy and gifts, — then wakes to look once more upon the waste of ocean, snow and hail falling all around him, and sea-birds dipping in the spray: —

Him seems at soul that he sees his master,
 clips him and kisses and lays on his knee
 head and hand (as erewhile he used
 in days that are gone), of the gift-throne fain.

¹ Wackernagel (*Kl. Schr.* 185) remarks that practically all technical terms used by sailors are of Germanic origin, and that marine activity, even when shown by Celtic races, is due to Germanic beginnings.

² Poem of same name, Grein-Wülker, *Bibl.* I. 285, 37 ff.

Then once more wakens the weary outlaw,
 sees before him fallow waves,
 plunge of sea-birds, spreading plumage,
 hoarfrost and snow with hail commingled. . . .

So fares the man fated "to stir with hands the rime-cold sea." Yet another picture of the same sort greets us in the *Seafarer*.¹ These are descriptions; let us look a moment at the poetical figures themselves, the kennings for sea, ship, and sailor. For "sea" Bode counts twenty "literal" terms in Anglo-Saxon, and could add more. Of figurative terms we have such kennings as: the home of the whale, the realm of monsters, the sea-fowl's bath, the pathway of the whale, the swan-road, the sail-street, the beaker of the waves, the realm of billows, the water-fortress, the wave-roll, the salt-stream,—and that difficult word, *gârsecg*. The frozen sea is called "waves' fetters." For "ship" we have the wave-stallion (we still say a ship rides at anchor), sea-horse, sea-swimmer, wave-walker, surf-wood, the tarred board, the wave house, the curved prow, the ringéd prow (on account of the ornaments of the bow). A sailor is called sea-rider, or guest of the waves, in addition to a number of literal terms.² These are Anglo-Saxon, but the life of the Scandinavian Vikings developed such simpler kennings into an ingenuity and obscurity which belong more to puzzles than to ordinary verse.³

Commerce nowadays implies an exchangeable medium and interest on capital. The latter, says Tacitus, was unknown to our Germans; and out of

¹ Wülker-Grein, I. 290 ff.

² See Bode's dissertation on *Kenningar in d. Ags. Dichtung*, 1886.

³ Examples in Vigfusson-Powell, *C. P. B.* II. 457 ff.

this fact he makes great trumpeting for their virtue. The currency, he says, was in terms of flocks and herds;¹ and we infer that a definite kind of animal — in Scandinavia it was the milch-cow — made a unit of value.² Three one-year calves are there worth one cow, while a seven-year bull is worth two cows, and a stallion from four to ten years old equals one cow. “Three times eighty” pounds of sheep’s wool were also worth one cow. So ran Scandinavian computation, though cloth or linen was often reckoned as standard of value. Milk and cheese have here and there passed for money.³ The Anglo-Saxon values of flocks are set forth in the laws;⁴ as “a sheep with its lamb is worth one shilling until fourteen days after Easter,” or “the horn of an ox is worth ten pennies (*pæninga*).” In the seventh century, horses were used as standard of value, and fines levied in corresponding terms.⁵ But actual money in the shape of Roman coins was known even among the Germans of Tacitus. Probably to prevent the use of counterfeit coin in their trade,⁶ Germans, as Tacitus narrates, preferred old Roman coins of the Republic, many of which had serrated edges and could not be clipped; silver, moreover, they preferred to gold. All this is evidence of bargain and sale, as well as mere exchange. Among the more important commercial transactions, we may safely reckon the sale of real estate, a species of trade which, in whatever form and

⁶ Wackernagel, *Kl. Schr.* I. 64; *Germ.* V.

frequency, must have been familiar to the ancient Germans. This we may fairly infer from the symbolism in later transactions of the sort. A stick or branch from the growing timber, a piece of the actual turf or sod, a blade of grass, were handed in presence of witnesses to the new possessor.¹ The cleverness and presence of mind of William the Conqueror are nowhere better seen than in the jest with which he rose from his fall on touching English ground, with a handful of earth as symbol that he took possession of the realm. This appealed to the men whose Scandinavian blood still flowed in comparative purity.

Of regular Germanic professions there can be even less record than of trade. The healing art was largely bound up with religious rites, as the charms and incantations testify;² but there was the beginning of a science in the selection of herbs and simples. The confusion of both methods may be seen in such a collection as the Rev. Mr. Cockayne's *Leechdoms, Wortcunning, and Starcraft of Early England*.³ Women had much to do with these things; and the sibyl was no doubt invoked for aid in case of disease or hurt. It is curious enough that painful attacks of gout or rheumatism were attributed to the arrows of the "hags," the mighty women who course the sky, and send their shafts at the unwary mortal.⁴ This for the matter of ordinary medicine; but so far as surgery was concerned, Weinhold⁵ is of opinion that an age of constant warfare and battles would attain considerable

skill in the treatment of wounds, the art of amputation, and kindred matters. As for other professions, the schoolmaster was emphatically "abroad," and the lawyer was chieftain or priest.¹

CHAPTER VIII

THE WARRIOR

Military service of two kinds — War the chief business of Germanic life — Courage — Types of the warrior — Cowardice — Germanic weapons — Armor — Cavalry — Importance of the infantry — Tactics of the army — The onset — Second kind of military service — The *comitatus* — Its meaning in Germanic life and history — Age at which the German took up arms.

UNQUESTIONED and absolute lord of his household, the free German had well-defined duties towards the state. These duties were military and civil; and, as we may well imagine, the military were of chief importance. In Anglo-Saxon times, both varieties are represented by the three obligations laid upon every free citizen (thane): to repair the burg or fortified place, to mend the bridges, and to serve in the militia.¹ Military service, obligatory upon every Germanic citizen, called him in time of need to take his place in the general army, which was simply "the folk in arms."² A second sort of military service was voluntary; the free man fought abroad under foreign princes or wherever war could be found. But service in the main army was a very frequent matter, calling for and developing the supreme Germanic virtue, —

¹ See, among other cases, Schmid, p. 224 (*Æthelr.* V. 26).

² Waitz, I. 402.

a virtue that was born in the freeman, and made strong in him by every possible device of example and training. In fact, the whole education of a Germanic youth was a lesson *de contemnenda morte*.¹ Now Rome was a military state and was founded upon the idea of a folk in arms; but the desperate courage of the German warrior made an almost uncanny impression upon the legions. As for the Germans, they had no false modesty about their merits. During the reign of Nero, certain Frisian ambassadors came to Rome and in the course of their entertainment were brought into the theatre. Here they quietly and uninvited took the seats of honor, remarking that no people in the world surpassed the Germans in courage. As we have repeatedly noticed, they always went about armed, no matter how peaceful their business of the moment;² and a man unarmed was no better than a slave. They took their weapons to bed with them, as we may read in the account of *Béowulf's* watch in the hall on the night when he expects a visit from the monster Grendel.³ There are some very curious regulations in the Anglo-Saxon laws with regard to the degree of blame and the fine attaching to a man who carries his spear so carelessly over his shoulder as to injure other people;⁴ and we may see the earliest advances of law over license in the edicts against drawing a weapon in the hall

¹ Müllenhoff's fine summary may be quoted: "Etenim majoribus nostris fortitudo non modo summa sed prope divina virtus ac sola pugna esse videbatur, qua simul et omnis viri virtus et suprema omnium fatalis vis cerneretur." *De antiq. Germ. poesi*, p. 12.

² *Germ.* XIII. J. Grimm, *R. A.* 287.

³ See also Lehman, in the *Germania*, Vol. XXI. p. 494.

⁴ Schmid, p. 90, § 36.

or presence of the king.¹ Spear and shield are an easy metonymy for warrior, and warrior is synonymous with man; hence the legal phrase of "spear-side" for the male line of descent, in contrast to the "spindle" of the female side. We still hear occasionally this phrase of "relatives on the spindle side" used for maternal kin. King Alfred's will speaks of the *spere-healfe* and the *spinl-healfe*.²

When the German was not fighting, he loved to feast in his hall and hear good songs and tales of war. "To hear of battle and conquest was the German's delight;"³ and long after his conversion to Christianity, it is the deeds of valor which most attract him in the Bible and the legends of the church. The poet of the *Héliand*, with his evident partiality for "valorous Earl Peter," and the revel of battle-metaphors which describe the attack upon Malchus, shows what he would do if only the quiet gospel narrative afforded him an opportunity. Coming back to the Anglo-Saxons, we find the subject of Judith offering unusual attractions to one of our old but nameless poets; the resolute widow smiting off the head of drunken Holofernes, the ensuing fight, the rout of the heathen, are all close to the Germanic heart, and it responds in a fiery piece of epic, perhaps our finest fragment of the oldest period. From their scraps and shards of poetry alone we could

¹ Ælfred's Laws, Schmid, p. 74.

² Quoted from Thorpe's *Diplomatorium*, p. 491, in Wright's *Woman-kind in Western Europe*, p. 59. "Das nechste blut vom schwert [here taking place of spear] geboren erbet, und da kein schwert vorhanden, erbet die spille." *R. A.* 163, 171.

³ Grimm, *Andreas und Elene*, XXIV.; Ten Brink, *Geschichte d. engl. Lit.* p. 56 f.

tell why Tacitus calls the Germans "a race that thirsts for dangers."¹ The passion began with infancy. Tacitus, speaking of the Tencteri, a Low German tribe which excelled in horsemanship, says: "Not greater among the Chatti is the renown of the foot-soldier than the fame of the horseman among the Tencteri. So the ancestors established it, and so the offspring imitate. It makes the sport of children, the rivalry of youth, the habit of age."² What Tacitus means by sport of children is evidently their early skill in sitting and managing a horse; but a certain commentator looks deeper. Evidently, he says, the Tencterian children begin their chivalrous career "on wooden rocking-horses."³ Cæsar, too, bears testimony to this training of the German youth. "All their life is spent in hunting and in military exercise."⁴ Seneca speaks of their "tender children," who early learn to "brandish the spear."⁵ A host of later Roman witnesses could be called, when the almost generous admiration of great captains like Cæsar, and statesmen like Tacitus, changes into the tone of fear. When Salvianus speaks of the Saxons as "ferocious [efferi]," we have a whole commentary on the changed attitude of Rome towards Germany. True, there is no lack of justification for the phrase. Whenever we wish to see any Germanic trait in its most exaggerated form, we look to Scan-

¹ "Gentes periculorum avidas." *Hist.* V. 19.

² *Germ.* XXXII.

³ We quite agree with Schweizer-Sidler that this view is "*fast lächerlich.*"

⁴ *B. G.* VI. 21.

⁵ *Epist.* 36. 7. Other references of the kind will be found in Müllenhoff's article on the Sword-Dance, cited above, p. 112.

dinavia. Of course, the "Bearsarks," the *Berserker*,¹ are the stock illustration of the old Norse ferocity and lust for battle; yet according to Vigfusson and Powell,² this matter of the Bearsark rage and frenzy has been vastly exaggerated. "Bearsarks were really *chosen champions*;" and they doubtless made great clamor when they went into the fight, with "their war-whoop, and the rattling of sword and spear against shield," which only agrees with the Tacitean account of the noise made by a German line of battle at the first wild onset. Bearsark, says our authority, means simply the fur coat of the nobler henchmen. We may remember that the Germans of Tacitus wore skins. That these men were gentle, is not asserted; but they were not crazy. The Germanic temperament was savage, uncertain, and gloomy; pent up in the narrow Norwegian valleys,³ increased by seclusion and intermarriage, these characteristics took an acute form. Even in recent times, the Norwegian's knife flashed out on very slight provocation. Battle would naturally fan their fury to its height; but it was all in the way of natural, not artificial ferocity. The Bearsarks were not professional lunatics.

The prime quality of barbaric courage is a fine contempt for death. Of this we shall have more to say under the head of Germanic belief in immortality; here we may consider it as it affects the warrior. High over all suspicion of rhetoric rises the

¹ Maurer, *Bekehrung der Norweg. Stämme*, II. 408, makes it thus, and refers the name to the same idea as that of werewolves. Others insist on *baresarks*, because they went into fight without armor.

² *C. P. B. I.* 425, 530.

³ *Ibid.* p. 426.

death-cry of Ragnar Lodbrok, as he lies in the pit full of serpents:—

Lapséd is life's hour; laughing I die.¹

It was the Germanic virtue to take death with this "frolic welcome." The *Atla-Kviða* or *Old Lay of Atli* (Attila) gives us an excellent illustration, drawn in sharper lines than the corresponding scene of the *Nibelungen Lay*. The translation is by Vigfusson and Powell:²—

"They asked the brave king of the Goths³ if he would buy his life with gold. [Then said Gunnar,] 'Hogni's bleeding heart must be laid in my hand, carved with the keen-cutting knife out of the breast of the good knight.' They carved the heart of Hialli (the thrall) from out his breast and laid it bleeding on a charger and bore it to Gunnar.

"Then spake Gunnar, king of men: 'Here I have the heart of Hialli the coward, unlike to the heart of Hogni the brave. It quakes greatly as it lies on the charger, but it quaked twice as much when it lay in his breast.'

"Hogni laughed when they cut out the quick heart of that crested hero, he had little thought of whimpering. They laid it bleeding on the charger, and bore it before Gunnar.

"Then spake Gunnar. . . . 'Here have I the heart of Hogni the brave, unlike the heart of Hialli the coward. It quakes very little as it lies on the charger, but it quaked far less when it lay in his breast.'

¹ "Lifs ero liðnar stundir, læjandi skal-ek deyja." See *C. P. B.* II. 341 ff. Grimm, *G. D. S.* 89 f.

² I. 48 f.

³ Gunnar.

“ . . . The band of warriors put the king alive into the pit that was crawling with serpents. But Gunnar, alone there, in his wrath smote the harp with his hands; the strings rang out.”

When the German could no longer “drink delight of battle with his peers” in that “game of swords,” as his most popular kenning termed the battle, he found nothing left to live for, and was fain to die. So died by their own hand those noble Sigambri, “men of mark” in their clan, whom, though ambassadors, Augustus treacherously disarmed and distributed among various cities: “out of very shame they put themselves to death.”¹

Indeed, wherever we look,—at the boys who learn to back a steed and send spears home to the mark, at the warlike names of man or woman, at the actual combat, and if, perhaps, we include the fight which late Scandinavian myths insist shall end the world, — everywhere the evidence presses upon us that our ancestors were “fond o’ fechtin’” to a degree rarely met with in history. The very metre of their poetry is the clash of battle, and knows scarcely any other note. This passion of bravery, not uncommon in barbarians of a mounting race, was further strengthened in the German by his belief in another world. The belief itself we shall consider later, but its fruits we may briefly notice in this place. In the *Pharsalia* of Lucan,² the connection of Germanic courage with Germanic faith is strongly asserted; and the native records themselves are full of the same testimony. The song of Ragnar Lodbrok, from which a quotation was just made, contains a passage which shows how bravery

¹ Dio Cass. 55. VI., and *Deutsche Vorzeit*, p. 304.

² I. 458 ff.

and faith went hand in hand. "The fearless man," says Ragnar, "does not quail before death. *I shall not come into Withri's [Woden's] hall with a word of fear.*" Not, we can almost say, not as a tired actor going off the scenes did a German die; but rather as the actor, fresh from his rehearsal, waiting for the word that sends him on the stage before an audience of warriors and kings. What better entrance than in the thick of fight, with a song of defiance and a laugh? This passion of ferocity, tutored by centuries, results at last in the calmer and nobler but still cheerful courage of Harry the Fifth at Agincourt, or of his father's antagonist in the lists at Coventry: —

As gentle and as jocund as to jest
Go I to fight: truth hath a quiet breast.

Sometimes the consolations of death are based entirely on the bravery which has dared it, on the source of it, and on what we may call its artistic setting and merit. Fine are the dying words of Wolfhart in the Nibelungen Lay.¹ He and the youngest of the Burgundian kings have given each other mortal wounds.

And if my kin be minded to weep that I am dead,
Go tell the best and dearest that this is what I said:
They must not wail and mourn me, there is no reason why;
A king's right hand hath slain me, a lordly death I die.

This has a fine ring, and lacks not for a late echo in the words of Hotspur before Shrewsbury field: —

An if we live, we live to tread on kings;
If die, brave death when princes die with us.²

¹ *N. L.* 2239.

² *I. Hen. IV.* V. 2.

But we are overwhelmed with material of this sort; take, for example, that highly dramatic scene of the Nibelungen Lay,¹ where Dancwart cuts his way through the Huns, and bursting into the banquet hall, where sit Etzel and Kriemhild with their royal guests, cries out to his brother Hagen that all the Burgundian retainers have been massacred in their quarters; and grim Hagen asks:—

“But who has done it, then?”

“That has fair Master Bloedel and with him all his men!
Yet dearly has he paid us, let this at least be said,
For with these hands of mine, I’ve stricken off his head.”

“That is no weeping matter,” made answer Hagen bold;
“If only of a warrior such story may be told,
That hero’s hand hath slain him in free and open fight:—
For such a death fair women should make their mourning light.”

The thought lapses from this grave old setting into the lighter frame of a modern commonplace; we find it, for example, in Herrick, who if a “pagan,” as critics will call him, was as English a pagan as ever loved beef and ale.

To conquer’d men some comfort ’tis to fall
By th’ hand of him who is the generall.²

On the other side of the picture, we find terrible disgrace in the death of a hero or warrior by the hand of woman. This is the very climax of tragedy in our Nibelungen Lay. All are slain save the arch-murderer, Hagen, and the arch-avenger, Kriemhild, the too faithful vassal and the too faithful wife. Kriemhild takes her dead husband’s sword and kills

¹ Avent. XXXIII.

² “Some Comfort in Calamity.”

with it the murderer, who is bound and helpless before her; in some ways, we are ready to concede, a just retribution. But the sentiment of Kriemhild's own living husband and ally in vengeance cannot applaud the act.

“Alas,” bewailed the monarch, “Alas, and now is slain,
All at a woman's hands, the best and noblest thane
That ever led in battle and ever lifted spear!
And though he was my foeman, his fall shall cost me dear.”

Out spake old Hildebrand: “No comfort shall she know
Because she dared to slay him!”

And the gray-headed warrior springs to the woman and kills her, and no one holds him back or blames him for his deed.

But this sense of fitness and unfitness, the consolations of an honorable death and the horrors of slaughter at unworthy hands, are less intense than the religious and fatalistic sanctions. It is instructive, so far as fatalism is concerned in the matter, to see how the opposite notion of individual freedom, personal responsibility, that tendency to trust in one's manhood and in nothing else, keeps alternating in Germanic hearts with the sense of an inevitable, inexorable fate. The Germanic creed is undoubtedly expressed by King Gernot: ¹—

Dâ sterbent wan die veigen, —
Only the doomed ones die, —

which is nothing more than Hamlet's, “If it be now, 'tis not to come; if it be not to come, it will be now . . . the readiness is all.” ² But the impetuous sense

¹ *N. L.* 149.

² *Ham.* V. 2.

of individual manhood, the anticipation (if we must find a modern instance) of Fletcher's nobler astrology, — "man is his own star," — rebelled against this helpless note of acquiescence, and tacked a fiery rider to the wonted phrase. Fate, says *Béowulf*, as he tells of his battle with the sea-monsters,¹ fate often saves a man *if he have plenty of courage*.

Oft Wyrd preserveth
undoomed earl, — if he doughty be.

The same idea and the same phrase, with very slight change, passed into the Christian poetry of our ancestors, and have since become a commonplace. In the Anglo-Saxon *Andreas* we read:² —

Therefore sooth will I say to you ; —
never leaveth the living God
earl to his doom, *if he doughty be*.

"Wyrd," the fate-goddess, has been changed to suit the new faith; but the essentials of the old epic phrase are there. In one passage of the *Béowulf* we have a characteristic³ blending of the two religions. Grendel the monster would have devoured many more warriors of the Danish court, —

Had not wisest God their Wyrd averted,
and the man's bold mood, —

that is, had not *Béowulf* slain the demon.⁴ We may

¹ *Béow.* 572. *Fæge* is the same word as *veigen* above, like Scotch *fey*.

² 459 ff.

³ Characteristic, because the *Béowulf* is a heathen epic put together by a Christian monk.

⁴ *Béow.* 1057 f. The idea is of course evident enough; the original sentiment, however, is not a commonplace, but an ethical theory, a

add one example from Scandinavian poetry. In the *Skirnismál*, where Skirnir is to ride to giant-land and win for the god Freyr that maiden Gerthr, whose fair white arms "shed a light through all the sky and sea," Freyr gives to the messenger both steed and sword: "a horse will I give thee that shall bear thee through the murky waver-flame,¹ and a sword *which will brandish itself and fight, if he is brave that holds it.*"² This rises quite above the commonplace, even of the old epic; a sword of self-respect evidently, that will not move to its miraculous calling, if it be held in ignoble hands. What were thought to be noble hands in such a case would be easy to prove from even random selections of Germanic poetry. Let us take a single example. It is that fine old Saxon ballad of the *Fight at Maldon* where "Alderman" Byrhtnoth, with a hastily gathered array of the local militia, opposes a party of Danish pirates. These offer him peace in return for tribute, a bargain too often struck in the degenerate days of Æthelred. But the Saxon answer has a ring ancestral at once and prophetic of the later English hardihood.

part of the most intimate Germanic life. It is always instructive to see these epic forms and phrases passing into burlesque, which loves to catch popular sentiment. Thus our fine old personal equation of the providence of Wyrð finds echo in Chaucer's *Sire Thopas*. That gallant knight is hard put to it in combat with a giant, Sir Olifaunt by name:—

Sir Thopas drough on-bak ful faste;
 This geaunt at him stoones caste
 Out of a fell staf slynge;
 But faire eschapeth child Thopas,
*And al it was thurgh Goddis gras,
 And thurgh his faire berynge.*

¹ The girdle of fire about the maiden's hall.

² *Skirnismál*, 9, in Hildebrand's *Edda*, p. 54.

Byrhtnoth spake, his shield uplifting,
 waving light spear, with words replied,
 angry and resolute, answered back : —
 “Hear’st thou, seaman, what say this folk ?
 They will pay you tribute in trusty spears,
 venom’d darts and dear-held swords,
 war-gear that steads you the worse in battle!
 Herald of pirates, hear our answer !
 Say to thy people no pleasant message : —
 Here stands, not unonor’d, an earl with his band,
 who is fain to defend these fields ye see,
 Æthelred’s land, my lord and master,
 the folk and the ground. . . .” ¹

The fight begins, and Byrhtnoth struggles gallantly,
 but he is sorely pressed by the foeman and at last
 wounded with a spear. He —

pushed with his shield that the shaft broke off,
 and burst the spear that back it sprang ;
 fierce grew the thane, and he thrust his lance
 in the wicing proud who had wounded him.
 Sage was the chieftain, sent his lance
 through the pirate’s neck with knowing hand,
 till he reached the heart of the heathen foe.
 Straightway a second spear he drove
 that the corselet burst ; the breast was wounded
 through ringéd mail, in the midst of the heart
 stood the poisoned edge: the earl was blither,
 the bold one laughed, and his Lord he thanked
 for this good day’s work that God had sent him . . . ²

Then he is himself killed, but dies fighting to the
 last, shouting courage to his men, and with a song
 of proud thanksgiving on his lips : —

I praise and thank thee, Prince of nations,
 for all my delights while I lived on earth, —

¹ *Maldon*, 42 ff.

² 136 ff.

and expires with a prayer for his soul's welfare. So fought and so died a true Saxon, true to the spirit of his ancestors who nearly a thousand years before had defied the legions. For Byrhtnoth, with his splendid achievement, stands just midway between our time and the times of Cæsar and Tacitus.

If such was the Germanic estimate of courage, it is easy to guess what would be for them the vice of vices and the crime of crimes. Disgrace was stamped indelibly upon the man who left his shield behind him in the battle. He was shut out from tribal worship, entered no fane, took part in no council, and — if this is not the flourish of Tacitean rhetoric¹ — often ended his infamy by a self-inflicted and ignominious death. Direct cowardice, desertion, and similar crimes found no mercy whatever.² Such offenders, where treachery was suspected, were promptly hanged; while the mere coward and the fugitive, like the doer of nameless crimes, were sunk wretchedly in a swamp with a wicker-hurdle pressed over them, the punishment of women: —

Cowards who were in sloughs interred alive;
And round them still the wattled hurdles hung
Wherewith they stamp'd them down, and trod them deep,
To hide their shameful memory from men.³

Crimes, says Tacitus, should be punished openly; but scandals stifled in darkness and silence. Both of these modes of execution survived in the middle ages.

We have mentioned hanging as in some degree a soldier's death. To hang a convicted man to the

¹ *Germ.* VI.

² *Germ.* XII.

³ Matthew Arnold, *Balder Dead*.

nearest good tree was the sentence of the Westphalian *Vehmgericht*.¹ Our old friend of the ballad, Johnie Armstrong, with many others of the "most noble thieves," — that is, marauders of the Scottish marches, — were all, by the king's command, "hanged upon growing trees."² These were gentlemen born. The punishment of the gallows was widely used by our earliest ancestors, and finds a varied expression in the older literature, — chiefly in Scandinavian poetry.³ It was by no means so ignoble an exit from life as it is now, and indicated no absolute disgrace like the vile indignities of the hurdle and the swamp. The gallows did not mutilate a body, and its victim had moreover a fine chance to join the Wild Huntsman as he swept by, and so to storm the heights of heaven and Valhalla.⁴ Nay, Odin himself, as he tells us in the *Hávamál*, "hung nine nights on the windy tree," that is upon the gallows;⁵ and whether or not this be a Norse version of the Crucifixion, the honorable association remains. Oddly enough, some distorted mediæval legend proclaimed that Cræsus of old ended his days in this fashion, as had been foretold him in a dream; and in defence of popular faith in visions he is cited by the hero of the *Nonne Prestes Tale* in Chaucer:⁶ —

Lo Cræsus, which that was of Lydes king,
Mette⁷ he nought that he sat upon a tre,
Which signified he schuld hanged be?

¹ See a popular but accurate account in *Vehmgerichte und Hexenprocesse*, by Dr. Oskar Wächter, in the "Collection Spemann."

⁴ Rochholz, *Deutscher Glaube und Brauch*, I. 273.

⁵ Bugge, *Studier*, 292.

⁶ V. 318 ff.

⁷ "Dreamed."

Since hanging had these associations, ingenuity was quickened to put some disgrace into the fact; and a fashion often employed was the device of hanging wolves or dogs along with the culprit, who was also placed head downwards, — one of the numerous compliments which mediæval law paid to the Jews.¹ Even under the more ignoble circumstances, hanging was a penalty reserved for males; women were burnt, drowned, or stoned to death. “Den dieb soll man henken und die hur ertränken.”² Later it was the prerogative of nobles to be beheaded, while common men were hanged; but the poet of *Béowulf* seems to indicate that if the old king, Hrêthel, had punished Hætheyn in the way of blood-feud for the innocent murder of the elder brother Herebeald, it would have been by the gallows. The monarch cannot bring himself to it: —

Grievous it is for the gray-hair'd man
to bide the sight that his son must ride³
young on the gallows.⁴

We may conclude that a gallows-destiny, while not yearned for, and far less noble than death by sword or spear, did not acquire its peculiar disgrace until the middle ages. In the time of Tacitus, men who, certainly at some bodily risk, deserted their own cause and betrayed it to the enemy,⁵ were hanged to trees — probably, says Grimm, dead and leafless trees. The victims were thus a sacrifice to

¹ *R. A.* 685.

² *Ibid.* 687.

³ “Ride” is the technical term.

⁴ *Béow.* 2444. In the Sacred Grove at Upsala in Sweden, says Adam of Bremen, could be seen many corpses of men and beasts hung upon the trees.

⁵ “Proditores et transfugas.”

tribal gods. But no god cared for the coward who fled in sheer physical terror, nor for the worker of abominations in ordinary life: these were stamped and buried out of sight, in slime and mud.¹

It is evident that cowardice was the unpardonable Germanic sin, and courage the cardinal virtue of a Germanic warrior. Let us now glance at these warriors in their array. The make-up of the army was not very intricate; discipline, system, the strategic conduct of a campaign, were hardly known at all. An Arminius, trained as he was to Roman discipline, might for a while animate the army with single plan and spirit; but he could not organize his troops for permanent work nor establish a regular system. Leadership consisted not so much in direction and organization as in example of valor. The individual warrior was the one supreme element, his personal strength and his courage; and he was, moreover, decidedly better than his weapons. These were poor enough. With some allowance for the purpose of the speech, the description given by Germanicus in his address to the legions² furnishes our best idea of the German soldier and his arms. "Not only the open field," said Germanicus, "was a good battleground for the Roman soldier, but also, if one acted in a rational way, the forests and thickets. For the huge shields and the long spears of the barbarians could not be managed among the tree-trunks and low bushes so easily as the javelin, the sword, and close-fitting coverings. The main thing for the Romans was to rain their sword-strokes upon the faces of the

¹ Kemble, in his *Salomon and Saturn*, p. 89, gives some further illustrative passages.

² Tac. *Ann.* II. 14.

enemy; the Germans had neither armor nor helmet; not even their shields were made of iron or leather, but were simply a sort of plaited willow-work with thin painted boards. The foremost line of battle might be fairly well supplied with spears; the rest had darts, short, or else with points hardened in the fire."¹ This is not a very good showing for the Germanic arsenal; but we must not forget the occasion. Moreover, we have the testimony of the graves and other finds. If the bronze age is reckoned from about 1500 to 500 B.C., we must count bronze swords, of which Denmark's soil has surrendered such numerous and exquisite specimens, among the possible acquisitions of a sturdy German warrior.² Perhaps such are the *enta geweorc*, the work of giants, of which we hear so often; and there is good reason to think that these are meant when, in Saxon or Scandinavian poetry, reference is made to the "fallow" sword.³ True, Germanicus does not mention the sword in his list of the barbarian arms; and we may well infer that it was not the universal weapon. Metals were rare in Germany; and iron, though familiar, does not seem to have been mined and worked.⁴ Swords were, nevertheless, known and valued by the Germans; and nothing is so often mentioned in their traditions. On the column of Marcus Aurelius the Germans are represented with short, crooked swords; and swords are

¹ The account of Cimbrian arms given by Plutarch speaks of swords, armor, and so on, but they are evidently booty taken from the enemy. What forges were there in the German forests to turn out such work?

² See Montelius, *passim*.

³ See Vigfusson-Powell in *C. P. B.* II. 481.

⁴ *Germ.* VI.: "*Ne ferrum quidem superest*"; that is, not even iron abounds. But in the early days it was imported.

mentioned among the Germanic tribes which, notably under Ariovistus, made front against Cæsar. A sword was undoubtedly expensive and highly valued; for as late as the sixth century, among the Franks, sword and scabbard are reckoned at the worth of seven cows, while shield and lance together only equal two cows.¹ The antiquity of the sword as Germanic weapon can be inferred from another consideration — the name of the Saxons, which is supposed to be derived from the short sword or *seahs* (our oldest English form of the word) carried by warriors of that race.² To be sure, the name of Saxons is not known to Strabo, Pliny, or Tacitus, and is first mentioned by Ptolemy in the middle of the second century as belonging to a small tribe on the Cimbrian peninsula. For all that, however, the name is far older than the mention of it, and was doubtless applied to themselves by all the minor tribes along the Elbe and the Weser. By the fourth century, Saxons and Franks are the chief Germanic races. Saxnot is one of the abjured divinities in the famous renunciation; and in the genealogy of the kings of Essex, Saxnéat is the son of Woden. Saxons, then, must mean “the men with short swords,” and Saxnéat “the sword-companion.” Grimm quotes the well-known account of Nennius,³ where Hengist tells his men: “When I cry out to you and say ‘*en Saxones, nimith eure Saxas,*’⁴ seize your knives and rush upon

¹ Arnold, *Deutsche Urzeit*, p. 279.

² Zeuss and Grimm uphold, Kemble opposes, the etymology. See Kemble's *Saxons*, I. 41; Grimm, *G. D. S.* 424; Müllenhoff in *Haupt's Zlst.*, Anzeiger, VII. (1881) p. 213. According to Müllenhoff, *sax* is neuter, and means an instrument for cutting.

³ *Hist. Brit.* Cap. 46.

⁴ That is, “Saxons, take your swords.”

the foe." Continental Saxons of a later date were wont to bring their knives when they came to court, and thrust them in the ground as they declared themselves guilty or innocent of a given charge;¹ and this, Jacob Grimm thinks, is a survival of the Germanic habit of going armed to all popular assemblies. Other names that may be connected with the sword are the Cherusci,² the clan of Arminius, and the tribe which our Widsith calls the "Swordsmen"; for personal names a good example is the father of *Béowulf*, *Ecgtheow*, — that is, "Sword-servant."

Short swords of this pattern were carried by the *Rugii*, as Tacitus especially notes.³ But the *Cimbrians* in Italy had longer swords; and the description of their weapons by Plutarch points, as was hinted above, at a long career of plunder on the part of these invaders who had made their way through Gaul, and had met repeatedly troops of good equipment. Plutarch describes their cavalry as furnished with "breastplates of iron and white glittering shields; and for their offensive arms every one had two darts, and when they came hand to hand, they used large and heavy swords."⁴ Kemble⁵ speaks of the "long, heavy Celtic or German sword," as contrasted with the short weapon of the Roman. These long swords were often two-edged, — and are found in German graves.⁶ In the *Waltharius Lay*, the hero carries two swords, one short and with single edge, on his right side, the other long and

¹ *R. A.* 772. ² Grimm, *G. D. S.* 426. ³ *Germ.* XLIV.

⁴ Plutarch, *Marius*, Dryden-Clough translation.

⁵ *Horæ Ferales*, p. 63.

⁶ Holtzmann, *Germanische Alterthümer*, 141 f.

double-edged, on his left. It is often assumed that all these swords were of iron; but Grimm in his list of weapon-names¹ says under *seax* "ursprünglich wohl eine steinwaffe," and Baumstark² reminds us not only of the stone swords found along the Baltic, but also of the great number of swords made from bronze. Swords found in those German graves which are known to belong to the period of tribal movement are mostly of iron; by that time the iron sword and (among the Franks of the sixth century) the battle-axe were chief weapons of the German foot-soldier. When Tacitus says that "few Germans use swords,"³ he is stating for the first century what still held true, to a large degree, in the ninth or tenth. In Cnut's time shield and spear, bow and arrow, were weapons for the rank and file; and a sword is in our own day mark of the officer as distinguished from the common soldier. Anglo-Saxon law made a "ceorl" "sîðcund," that is, raised his rank, when he had helmet, coat-of-mail, and gilded sword, no matter whether he owned land or not.⁴ The importance of the sword is proved not only by the traditions and survivals to which we have alluded, but by the number of names for it in literal statement;⁵ by the poetical names or kennings for it, like the Norse *gunnlogi*, or battle-flame, and the corresponding Anglo-Saxon *beadoléoma*;⁶ by the personifications of it and name-giving, like Nægling and Hrunting, where we note the humanizing force of the suffix; and finally

¹ *Deutsche Grammatik*, III. 440. ² *Germ.* p. 308 f. ³ *Germ.* VI.

⁴ Cf. Schmid, *Einl.* LXVI., and Lehmann, *Waffen im Béow.* "Germania," 31. 486 ff. ⁵ Grimm, *Grammatik*, III. 440, gives a list.

⁶ See Bode, *Kenningar*, p. 55 f.

by the actual worship of it. How our forefathers would have felt the force of the dialogue in the fine Danish ballad *Hævnersværdet*,¹ where the hero takes counsel with his sword, or where by naming its name he restrains its thirst for blood!² Sometimes we find a sort of pact or league between warrior and sword, and when both keep the promise there is great glory won. So of the hero and his good brand in *Béowulf*:³—

Neither melted his courage, nor his kinsman's bequest
weakened in warfare. . . .

When a sword is about to kill some one, it gives forth a noise;⁴ in the Anglo-Saxon *Finnsburg* fragment, besides the usual battle-omens of screaming birds, the coat-of-mail "yells" or clangs, the war-wood (spear) dins, and "shield answers shaft."⁵ When *Béowulf* is going to seek and slay the monster mother of Grendel in her own ocean fastness, he borrows a sword; its name, the poet tells us, is *Hrunting*, and it is the noblest of ancient treasures, an heirloom; its edge is iron, stained with poison-drops and hardened with blood of battle; in fight it never yet had played false to the man who brandished it, whenever he dared the ways of warfare, the meeting-place of foes; this was not the first time that it was fated to do brave deeds. Noting, now, this seeming independence and individuality, we are not surprised at the expression which the poet uses when

¹ Grundtvig, *Danmarks Gamle Folkeviser*, I. 350, stanzas 16 ff., 35.

² See also Child, *Ballads*,² I. 96.

⁴ Maurer, *Bekehrung d. norweg. Stämme*, II. 123.

⁵ *Finns.* 5 ff.

he records a failure in the fight with the monster. *Béowulf* then found —

that the Light-of-Battle was loath to bite, —

and so it failed to work his will upon the foe. As for the speaking of swords, their word and wish, we are reminded of Wordsworth's personification; for, as Mr. E. B. Tylor has somewhere remarked, Wordsworth's power in this respect almost seems to revive the force of old mythology: —

Armor rusting in his Halls
On the blood of Clifford calls;
"Quell the Scot," exclaims the Lance;
"Bear me to the heart of France," —
Is the longing of the Shield.¹

Swords are full of supernatural traits, and often give out a magic light; one "conquering blade," an "old sword of giants," sheds such radiance, —

Even as from skies above shines and glitters
heaven's candle, . . .²

and thus illuminates the uncanny hall of the monsters with a light that reaches from the depths to the surface of the sea.³ A host of legends, gathered in recent times, but rooted in our oldest heathen superstitions, tell of charmed weapons which are now carried by the living, and now buried with the dead, but are always endowed with miraculous power, often gleaming far off through the night.

His sword well burnisht, shineth yet,
And over the barrow beam the hilts.⁴

¹ *Song at the Feast of Brougham Castle.*

² *Béow.* 1558 ff. "Heaven's candle" is, of course, the sun.

³ See Heyne's *Halle Heorot*, p. 46, note ⁴. ⁴ See p. 312, below.

To swear by one's sword — coming to the last category — was common down to modern times, not simply as some commentators on *Hamlet* assert, because the hilt formed a cross, but for traditional reasons. Indeed, we have evidence that the sword was worshipped. The princes of the Quadi, making submission A.D. 358 to an imperial army, draw their swords, "which they worship as deities," and swear to keep faith. So writes Ammianus Marcellinus;¹ and in another place, after an elaborate description of the Alani, a Scythian tribe, he says that their only notion of religious ceremonies is to thrust a sword into the ground and worship it "as Mars," — this, of course, simply an *interpretatio Romana*.²

It was the fashion to write runes on the sword. Often, as on the spearhead of Kovel described by Wimmer,³ the owner's name was graven upon the blade. The spearhead in question is probably from the fourth century,⁴ and bears the Gothic name *Tilarids*, or "bold rider." But incantations and spells, taking the place of our modern mottoes, were frequently carved; and these mysterious runes could be of good or of evil omen. When Freyr's zealous henchman is wooing Gerthr for his master, and the maiden refuses his gold, he begins to threaten her: "Look on this blade, maid, slender, marked with characters, that I hold in my hand; I will hew off thy head. . . ." ⁵ Then he goes on to praise the terrible potency of the weapon, due in part to the mysterious working of the runes. In like manner, a sword could

⁴ *Ibid.* p. 71.

⁵ Vigfusson-Powell's transl. in *C. P. B.* I. 114.

be made useless by incantations, and Saxo tells of a certain Gunholm, who was wont to dull and lame (*obtundere*) the hostile blade by his runic charms (*carminibus*). In *Salomon and Saturn*¹ we are told that evil spirits

write on his weapon woe-marks an heap,
baleful bookstaves; ² the bill ³ they bewitch,
the pride of the sword.

Against this evil, one's remedy consisted in singing a pater-noster as one drew the sword out of its scabbard, and the blade was then fit to do its work. Of course this pater-noster takes the place of some ancient and heathen "backward mutter of dissevering power."

Scarcity of iron made a relative scarcity not only of swords, but also of the longer lances, those "huge spears" mentioned several times by Tacitus. The common weapons of a German warrior were the *framea* for attack and the shield for defence; in the public assemblies assent was shown by clashing these weapons together. Concerning the nature of the *framea*, much has been said; and a close investigation by Müllenhoff,⁴ based mainly on philological data, concludes that although later Christian literature uses *framea* for sword (*gladius*),⁵ nevertheless we are to hold to Tacitus, who distinctly says it is a small lance or spear (*hasta*) with short and scanty iron.

¹ Ed. Kemble, p. 144 f. ² *Buchstaben*, letters. ³ Sword, blade.

⁴ In his far too sharp and contemptuous review of Lindenschmidt's *Handbuch d. deutschen Alterthumskunde*, "Haupt's Ztst." Anzeiger, VII. 209-229.

⁵ Müllenhoff notes that Juvenal uses *framea* for the lance of Mars, and Gellius names *frameæ* as missiles.

As for the word, it must be Germanic; in Müllenhoff's opinion it is a derivative of *fram*, and means "toward the front," — a projectile for close quarters or long range, precisely as Tacitus describes it. Jähns thinks that the so-called "celts" of stone or bronze, found so plentifully in ethnological museums, were fastened on a straight shaft and so formed the *framea*.¹ In later times, and with the greater abundance of iron, the better wrought *gêr*, Anglo-Saxon *gâr*, or spear, took the place of the missile, which thenceforth disappears from history. This change increased the efficiency of Germanic soldiers, precisely as in the case of the African chief mentioned above,² who converted the missile lance into a long, stout spear meant for thrusting alone.

The shields of German soldiers were not elaborate. Otherwise they had little armor, if we except certain leather or possibly iron helmets used by eastern tribes.³ Holtzmann is rash when he says they went without armor, not only because they had no iron, but "because they loved defiance and gladly sought scars," — an argument that appeals, perhaps, to a German student, but hardly covers the ground. The huge shield left them in a measure independent of other armor; and indeed we find them scarcely clad at all, fighting naked to the waist, like the older Gauls. We are told that the German cohorts in the army of Vitellius fought "with bodies naked, after the fashion of their country." In this guise appear the barbarian figures on Trajan's column; and Cæsar so describes the warriors of Ariovistus.⁴ Paul the

³ Baumstark, *Germ.* p. 328.

² See p. 209.

⁴ Cass. Dio, 38. 45.

Deacon testifies of the Heruli, that they fought naked save for a cloth about the loins. Who does not remember that picture in Plutarch's *Marius*, where the barbarians in sheer defiance let the snow fall upon their naked bodies, and setting themselves on their broad shields go sliding down the Alps? These immense shields covered a great portion of the body; Waitz says, all of it.¹ They were flat, made of wood or wicker-work, had often a metal boss, and were frequently colored. Like "ash" as name for spear, "linden" or the like is often used for shield,—the material for the weapon itself. Naturally, such shields cost but little, and were subject to very rough usage in battle. At the end of the fragmentary Hildebrand Lay, we read of flying splinters from the rapid sword-strokes of the combatants; and elsewhere we are told of a shieldbearer who in the heat of battle reaches a fresh shield to his warrior. With regard to the color, white shields, as in the case of Hildebrand and Hathubrand, as well of the Cimbrians in Italy, are often mentioned. The shields of the Harii² were black; those of the old Frisians were brown or white; the Saxons preferred red. For the Franks in the fifth century, Sidonius Apollinaris describes the shields as snow-white in the circle, tawny in the boss.³ Holtzmann thinks these colors were a rude heraldry, a means of distinguishing tribe from tribe, and even clans and families. Perhaps a symbol of some sort was painted on the shields. The Cimbrians wore forms of animals on their helmets, like

¹ *Verfassungsges.* I. 44.

² *Germ.* XLIII.

³ "Lux in orbibus nivea, fulva in umbonibus." See Weinhold, *Altnord. Leben*, 207.

the carven boar of Anglo-Saxon times;¹ and we hear in other places of the "emblems" of the Germanic shield.

How useful the shield was — and became — can be seen from the "board-wall" (*bordweall*) or wall of shields² which Anglo-Saxon warriors made, and which would have held the field at Senlac if Harold's orders had been carried out,³ and his men had kept their ranks. So in the ballad of *Maldon* we have allusion to this shield-wall; and the poem gives us a spirited picture of the doughty "Alderman" arranging the line of battle and exhorting his warriors to play their parts like men. In *The Battle of Brunanburh*,⁴ another ballad of Anglo-Saxon heroism, we hear the cry of delight that warriors have hewn their way through this shield-wall; for "cleaving the shield-hedge" was as much as routing the enemy.

Armor, except of the rudest kind, was introduced among Germanic tribes during the great migration. In *Béowulf* there is frequent mention of the coat-of-mail and the "ring-net," — the latter a corselet woven out of small rings, — as well as of the board-guarded helmet. We remember, too,⁵ that Béowulf expressed solicitude about his noblest war-weed, warding the breast, and desired that in the event of his death, this "work of Wayland" should be sent home.

Other weapons were doubtless familiar to the Ger-

¹ Seen also on Scandinavian helmets. See Montelius, work quoted, p. 162. For painted shields among the old Norsemen, see Weinhold, *Altnord. Leben*, p. 428.

⁵ See p. 111, above.

man. The hammer, weapon of old Thor, must have had its warlike as well as peaceful functions;¹ the battle-axe, which made the later Franks such a dreaded foe, found some use among their ancestors. The silence of Tacitus in regard to these weapons, just as with the bow and arrow, is not proof that the Germans did not have them; indeed, bows and arrows are mentioned by the *Germania*² as in use among the Finns. Gothic archers were afterwards in high repute; bows are mentioned at Maldon; at Senlac, among the English, bows and arrows were exceptional.³

Infantry, if we may use so technical a term, was the favorite Germanic array of battle; but cavalry was also known, and in the earliest times. Cæsar testifies to the tactics of the German horsemen. In the Commentaries we are told that before a general engagement, the cavalry of Ariovistus made constant attacks upon the Roman encampment, after this fashion: Six thousand horsemen were accompanied by as many warriors on foot, picked men, who formed a support and rallying-point whenever the cavalry retreated. When it was necessary to dash swiftly forward in long attack, or fall back rapidly to the rear, the foot-soldiers kept pace with the cavalry, holding often to the manes of the horses.⁴ In another place, speaking of the Suevians, Cæsar mentions the poor breed but toughness and exact training of the horses, which, when the rider dismounted to fight on foot, were sure to stand on the same spot till needed.

¹ Grimm, *D. M.*⁴ p. 151; *R. A.* p. 64; Schultz, in Paul's *Grdr.* II. 2. 201.

² Cap. XLVI.

³ *Norman Conquest*, III. 472.

⁴ *B. G. I.* 48.

Moreover, it was deemed disgraceful to use the saddle.¹ Tacitus tells about horses and men much the same story as Cæsar gives us, though the great general is far more clear and definite.² Some tribes must have leaned more to cavalry combats,—we may instance the Tencteri and the Batavians; but in general, and this is the statement of Tacitus, the chief reliance of the German was upon his foot-soldiers, a taste that prevailed down to the middle ages. It is curious to find English warriors, in the time of King Æthelred, riding up to the fight at Maldon, dismounting, and driving their horses off the field:—

he³ bade each soldier forsake his horse,
drive it afar, and fare along,
have mind on his hands and a manful battle!⁴

At the same fight, another warrior—

let from his hands his hawk so lief
fly to the forest, and fight-ward strode.⁵

So, at Senlac, every man in the Saxon army fought on foot:—

*Omnes descendunt et equos post terga relinquunt.*⁶

Ammianus Marcellinus gives us a much older instance, with an exquisite reason. The Alamannian infantry,

¹ IV. 2.

² *Germ.* VI. This mode of fighting with horse and foot mixed together is not peculiar to the Germans. For other examples see Hehn, work quoted, 45–47. It is to be noted that German auxiliaries serving in the Roman army are at first mostly mounted men, and once Cæsar actually took horses from Roman soldiers and gave the mount to Germans.

³ Byrhtnoth.

⁴ *Maldon*, 2 ff.

⁵ *Ibid.* 7 f.

⁶ Freeman, *Norman Conquest*, III. 472.

about to begin battle, make a great outcry because the princes do not descend from their steeds; for if the battle were lost, these gentry might ride off and leave their humbler brethren in the lurch.¹

Regarding the army as a whole, we find that it moved to attack — a supremely important moment² — in the shape of a wedge; the Frankish historian, Richer, says that as late as the ninth century this wedge-shaped column was still the order of battle among his countrymen. Strange, moreover, is the statement of Saxo Grammaticus that Odin³ taught Hadingus to form his army in such fashion that two should stand in the first row, four in the second, eight in the third, and so on; while on the side should stand (a foreign touch?) the archers and slingers. This formation Scandinavians called *the boar's head*. The same thing and the same name appear in the laws of Manu, and were not unknown to the Greeks. Scherer hence concludes an Indo-European origin.⁴ Holtzmann, relying on another place in Tacitus, where we are told that the Germans fought in loose order, and were arranged by families, essays the parlous etymology that *cuneus* (wedge) is

¹ Amm. Mar. XVI. 12. 34.

² Religious rites, revel, and feasting often marked the whole night before a battle (*Ann.* I. 65; II. 12; *Hist.* IV. 14; V. 15); after favorable auguries, and with high pomp and ceremony, the tribe went into the fight. Says Müllenhoff in his essay *de antiq. Ger. poesi*, p. 13, "Nulla enim erat major neque sanctorum apud Germanos pompa, quam ubi ordinata acie universus populus ad prælium ibat."

³ Müllenhoff shows that this is important for Odin worship. He was held as "auctor aciei corniculatæ et ordinandi agminis disciplinæ omnisque denique bellicæ artis ac scientiæ traditor (*i.e.* magister) ac repertor et animi bellici creator moderatorque sapientissimus esse credebatur." Müllenhoff, *de Chor.* p. 15.

⁴ *Haupt's Zeit.*, Anzeiger, IV. 97.

Roman misunderstanding of *kuni*, "kin," family or tribe. Probably the Germans dashed into battle as a wild, surging mass (*vagis incursibus*),¹ but with coherence and order according to families, and with the general shape of a wedge. A few men of valor in the van, the vast mob of ordinary warriors would naturally spread out behind the leaders.

Leaders we call them, for generals, in our sense of the word, hardly existed; though there was doubtless a rude system by which a number of officers were graded up to a supreme commander. Tacitus tells us² that the duty of such a leader was to set example rather than to issue commands. We may assume that high rank was helpful to his authority, and that election was necessary. Such an election of a general is mentioned by Tacitus,³ who says that the Canninefates, a Low German tribe, chose for their leader a man named Brinno, who was thereupon raised upon a shield, after the ancestral custom, and so rocked about (*vibratus*) upon the shoulders of those who carried him. It is probable that this sort of leader was elected for a considerable period,⁴ that he carried special weapons and adornments, and that he had, in common with the method of his election,⁵ much of the authority of a king. Like a king he received gifts.⁶ We are at some loss to set forth the true functions of a German leader, especially of the first in command. We may gather from Tacitus that he did not plan campaigns or direct tactics after the Roman fashion; and yet Ariovistus, and particularly Arminius, were not mere barbarian champions. They

¹ Tac. *Ann.* II. 15.

² *Germ.* VII.

³ *Hist.* IV. 15.

⁴ Waitz, I. 271.

⁵ *R. A.* 234.

⁶ *Ibid.* 245 ff. *Germ.* XV.

certainly planned and calculated and directed large movements of their respective forces. In regard to the subordinate leaders there is no difficulty; they were leaders in the literal sense, and set examples of prowess to their men. Indeed, the king or supreme chieftain himself had to show this quality, just as long afterwards William the Conqueror was foremost warrior of his army; and Hagen tells us what Germans expected of their monarch: ¹—

‘Twere fitting, spake out Hagen, for such a folk’s delight ²
 As chief and lord to battle the foremost in the fight, —
 Right so as these my masters ³ have here united stood,
 And hewn thro’ helm and harness till swords were bathed in
 blood.

It argues a lower state of military science, or else a great jealousy of aristocratic privileges, that in some parts of Germany the leaders were chosen by lot. This is mentioned by Beda as customary among the Saxons,⁴ and is found elsewhere, as among the Goths. However, the uniformity of tactics lessened the need of a general; for the main system of battle was to attack the foe with tumultuous energy, bearing down all opposition by sheer force of valor and strength. Like our modern opening battery, as sign of battle begun, so in Germanic warfare a spear hurled over the enemy gave signal for attack.⁵ Plu-

² “Kenning” for king; literally, “comfort of the people.”

³ The three Burgundian kings.

⁴ *Hist. Ecc.* V. 10. When the Germans served as Roman auxiliaries, they were allowed to have their own officers.

⁵ The hostile army was thus dedicated as sacrifice to the gods. In the *Voluspa* Odin hurls a spear into the host, and so arises “the first war.”

tarch, in his account of the Cimbrian attack, says that the Germanic infantry came upon the Romans like a tossed and roaring ocean. As they rushed into the fray, the warriors were wont to raise a wild chant, probably ending in a mere din of thunderous volume, for they used the shields to make echo and increase the volume of sound, holding them close to the mouth; ¹ while women and children, near to the line of battle, lifted up a great noise of wailing, which was meant to remind the warrior of his stake in the combat and so to spur him to utmost achievement, ² — a rough anticipation of Tennyson's picture : —

A moment while the trumpets blow
 He sees his brood about thy knee,
 The next like fire he meets the foe
 And strikes him dead for thine and thee.

These songs, thinks Müllenhoff, which warriors sang as they rushed into battle — who does not remember Senlac and the brawny minstrel of the *Chanson de Roland*? — ended in “hoarse and strident sounds . . . where, one may conjecture, the *r* and the *u* particularly prevailed.” ³ Early in the historical period — perhaps before — musical instruments were in use; drum, horn, and trumpet. ⁴ A fair idea of such a Germanic onslaught, with accompanying battle-cry and song, is given by Ammianus ⁵ when he describes

¹ *Germ.* III.

² *Ibid.* VII. and Müllenhoff, *de antiq. Germ. poesi*, p. 11: “Liberique a tergo positi ululatum sustulerunt; viri autem cantum.” See also his references, *Ann.* IV. 47 and *Hist.* II. 22.

⁴ A. Schultz in Paul's *Grdr.* II. 2. 201.

⁵ XVI. 12. 43. Bohn's translation is used.

the fight at Strasburg, in the year 357 of our era. Certain of the combatants, "frightening even by their gestures, shouted their battle-cry, and the uproar through the heat of the conflict, rising up from a gentle murmur and becoming gradually louder and louder, grew fierce as that of waves dashing against the rocks." Such was the Germanic onset.

Tactics of actual combat, so far as any are mentioned, seem to have been of a trivial nature, — like the feigned retreat. Hehn makes the admirable comment that German war-tactics were borrowed from those of hunting. The German fought men as he fought wild beasts, "by cunning, ambush, and surprise."¹

To the terror of this wild attack the Romans opposed discipline and system. German success depended on an overwhelming onset and rush; checked, flung back on itself, the "wedge" became a helpless and irregular mass, without order or direction, unable to cope with organized assault. It was Marius who saw this, and placed reserves behind his line of battle.

We have considered the first and more important branch of military service, obligatory upon every citizen. The second was voluntary. Aside from enlistment in the Roman army, — a custom which indeed took larger and larger proportions as time went on, but was regarded by the nobler Germanic sentiment as treason, — the young men were wont to enter the retinue of some powerful native chieftain. Cæsar² gives us our earliest information on the subject. Raids for plunder, he says, are not regarded as

¹ Hehn, p. 16.

² *B. G.* VI. 23.

wrong, but as a useful occasion to give practice and discipline to the younger warriors. If a prince¹ in the popular assembly offers himself as leader and calls on those who will follow him, all who approve the affair and the man rise, and amid the shouts of the multitude signify their assent. If then any one of these volunteers refuses to go, he is held as traitor and deserter. So far Cæsar. Very probably such raids as these passed into permanent expeditions; and we know that such an enlistment in the prince's service was frequently for life. Volunteers of this sort combined the attributes of a mediæval free-lance and a Swiss guardsman. It is the difference between these two types that may guide us in comparing the account of Cæsar with the description which Tacitus gives of the *comitatus* or retinue; the *comitatus*, as we shall presently see, has a firmer basis and a better organization than the earlier system of volunteering.

The *comitatus* was evidently one of the great moral factors in Germanic life and achievement. Interwoven with the sense and pride of kindred, and patterned after the family compact itself, the system fostered a definite obligation and inspired mutual devotion of prince and warrior. Here, perhaps, is the key to Germanic success and the secret of Germanic supremacy. In war, indeed, of whatever kind the Germanic virtue of courage came to the front; but in the *comitatus* courage was no more prominent than fidelity, loyalty, and truth. The sense of duty, the sense of standing and enduring for a principle, has

¹ Who was this prince? Waitz, I. 246 f., says it was not any given noble, but one of the *principes* elected by the people; while Arnold holds a very different view. See the latter's *Deutsche Urzeit*, 336-357.

always been the mainspring of Germanic success;¹ and here the sense of duty went hand in hand with affection and gratitude. Where the relation was entered into for life, all these elements were invested with supreme ethical importance. Tacitus tells us² that young men of the best blood attach themselves to a leader and serve in his train. They struggle for the nearest place to the chieftain; and he in turn strives to keep the most numerous and effective retinue. It is his pride to be surrounded by such a band, his honor in peace and his defence in war. In this way his name and influence are carried beyond his own country, and bring him return in renown and gifts; sometimes his reputation alone is enough to put down a war. In actual battle, the chieftain must not be surpassed in prowess, and the followers must not fail to emulate him. Shame without end befalls the man who deserts the chieftain, and his retainers must stand by him in his captivity and even in his death. After the battle of Strasburg, where Julian defeated the Alamanni, a German chief surrenders himself to the Romans, whereupon "his companions, two hundred in number, and his three most intimate friends, thinking it would be a crime in them to survive their king, or not to die for him if occasion required, gave themselves up also as prisoners."³ In short, as Tacitus says, the chieftain fights for victory, the followers fight for the chieftain.⁴

For our own early history, both the epic *Béowulf*

¹ On the Continent this *Pflichttreue* has become collective and monarchical; with Anglo-Saxons it is individual, as in the case of little Tom Brown half frozen on the roof of the stagecoach, with his "consciousness of silent endurance, so dear to every Englishman, — of standing out against something and not giving in." ² *Germ.* XIII.

³ *Amm. Marc.* XVI. 12. 60, trans. of Yonge.

⁴ *Germ.* XIV.

and the spirited ballad of *Maldon* are very helpful in showing how strong a hold this system kept on national life long after the days of Tacitus. In *Béowulf* we see both of those phases to which we have just referred. In the first part of the epic, Béowulf, a kinsman and "battle-thane" of Hygelac, lives at the latter's court. He hears of the troubles heaped upon the head of a neighbor king, Hrothgar the Dane; and, in nobler mood than that of the booty-seeking chieftains chronicled by Cæsar, chooses fourteen companions and sets off to free the monarch from his foe. Here is a *comitatus*, but it is for a specified time, an enlistment, as we used to say, for the war; whereas the Danish retainers who were destroyed by Grendel are the permanent followers and dependents of their king. Says Hrothgar:—

Sore is my soul to say to any
of the race of men what ruth for me
in Heorot Grendel hath hatefully wrought,
what sudden harries. *My hall-folk here,*
my warriors, wane: Wyrd hath swept them
into Grendel's terrors. . . .¹

To lose this *comitatus* is evidently the direst of ills; to increase it and strengthen it is the supreme good. Thus, in his happier days—

such speed of war was sent to Hrothgar,
honor of battle, that all his kin
obeyed him gladly: *so grew the youth,*
*a crowd of clansmen,*²—

that is, his success and honor drew young men to his side, and swelled his *comitatus* to stately proportions. And so Hrothgar determines to build a splendid hall,

¹ *Béow.* 473 ff.

² *Ibid.* 64 ff.

the "Heorot" described above, where he may divide his treasure with these warriors and give them feast and revel.

Generosity and the foremost place in valor are the duty of the prince; absolute fidelity and devotion mark the clansman. "Once in battle, it is a disgrace for the prince to yield to any one in bravery, a disgrace for the clansman not to match the valor of his chief. Shame and utter ruin of all reputation are his who leaves a battle-field alive after his prince has fallen." So runs the eloquent tribute of Tacitus;¹ and it is instructive to see how faithfully our early poetry bears out his testimony. We may take an example of the minor sort of fidelity, an incident in *Béowulf*, not without its homely pathos. The hero has gone deep into the waters to fight against the mother of Grendel in her ocean fastness. On the bank sit his vassals, with the clansmen of Hrothgar; but when, after weary hours, blood begins to rise to the surface of the water and stain all the floods, men fear the worst for Béowulf; and the Danes, giving up all hope, leave the place. But the clansmen of Béowulf still hold their mournful watch upon the shore, and when at last their chief returns triumphant, he finds them where he left them, hopeless but constant. On the other hand, the paternal solicitude of Béowulf for his retainers in case he should not survive his perilous undertaking causes him to remind King Hrothgar of a former promise:—

thou wouldst be to me,
should I fall in battle, in father's stead.
Be thou stay and strength to my stout companions,
my warrior-friends, if war should take me!²

¹ *Germ.* XIV.

² *Béow.* 1479 ff.

A still better note sounds in the final scene of our epic. Béowulf goes out to fight the dragon, and, scorning to use an army,¹ he takes with him only a few of his best retainers, — eleven picked men.² But at sight of the monster, belching flame and poison, the clansmen beat an inglorious retreat and leave their master to his fate, — all but one. Wiglaf, ashamed of the cowardly flight, sees from his covert how the old hero bears the stress of battle against overwhelming odds, and thinking of all the gifts and bounties his lord has heaped upon him, a nobler passion seizes him. He thinks of his own boastings in hall:³ —

I mind me the time when mead we took,
and loyal vow to our lord we made,
in the banquet-hall to the breaker-of-rings,
that we would reward him for warlike gear,
if ever the hour of evil came . . .⁴

and he urges the others to go to the help of Béowulf: —

Better for me this body of mine
should fall with my chief in clutch of flame.
Shame it were our shields to bear
back to our land, unless the rather
we fell the foe and defend our chieftain.⁵

Alone he springs through smoke and flame to the side of his prince, speaks to him a few words of cheer, and then fights manfully against the dragon. When all is over, and Béowulf lies dead along with

¹ Ibid. 2345 ff., 2401.

² 2638 f.

³ For these boastings in hall, see some later instances in Child's Ballads,² II. 277.

⁴ 2633 ff.

⁵ 2651 ff.

the foe, the ten come where Wiglaf, sprinkling water on the face of his lord, is vainly endeavoring to win him back to life. Out breaks the young hero's reproach, which closes with this prophecy of denunciation: —

Gift of treasure and girding of sword,
 delight of home, and life's support,
 to all your kin shall hereafter fail.
 Right of land shall be lost to all
 of the men of your clan when chieftains hear
 from far-off homes of the flight ye made,
 deed inglorious! Death is better
 for every clansman than coward life.¹

It is a dull pulse, to be sure, that does not beat the quicker for these words; but in *Maldon* the tone is even more intimate and direct. What passionate scorn is poured out upon the heads of those cowardly thanes who flee from the battle-ground and leave their lord dead among his enemies! *Maldon*, with this superb energy of patriotism, waited in vain for a rival until the *Agincourt* of Drayton; while modern poetry has essayed the note only to end in a sad, unreal chatter, saving always that passage in which Sir Walter's big heart throbbed to the fates of Flodden Field, — Scott himself no unworthy son of the old clansmen who put fidelity to one's chieftain at the head of all virtues, and his verses no unworthy echo of the early song: —

The English shafts in volleys hailed,
 In headlong charge their horse assailed,
 Front, flank, and rear, the squadrons sweep
 To break the Scottish circle deep
 That fought about their king.

¹ *Béow.* 2884 ff.

But yet, though thick the shafts as snow,
Though charging knights like whirlwinds go,
Though billmen ply the ghastly blow,
 Unbroken was the ring;
The stubborn spearmen still made good
Their dark impenetrable wood,
Each stepping where his comrade stood
 The instant that he fell.
No thought was there of dastard flight;
Linked in the serried phalanx tight,
Groom fought like noble, squire like knight,
 As fearlessly and well.

Fidelity to chieftain and king redeems and raises Hagen of the Nibelungen Lay from a mere assassin at the outset to a splendid hero at the end. The character of Ruedeger in the same lay shows us a situation as acute as any Greek tragedy can produce. Not even Orestes, with filial duty dragging him in opposite directions, is so completely tragical a figure as this Germanic warrior halting in agony between disobedience to his lord and battle with his guests and son-in-law; it is instructive to note that in this struggle between kin-duty and vassal-duty, the latter conquers. Finally, we may mark that when missionaries came into the Germanic lands to preach Christ and his twelve apostles, nothing appealed more actively to the native than the resemblance of this bond between master and disciple to his own system of chieftain and clansmen. Christ died for his beloved, and they endured martyrdom for him. What simpler theology?

Of the various names for the clansmen, the Latin *comes* seems to have been the outcome and survivor. When Tacitus talks of the "clients" of Segestes, it

is by a very evident *interpretatio Romana*. *Comes*, perhaps from *cum* and *eo*, would thus correspond exactly to Anglo-Saxon *gesîð*—one who goes with you on a journey. More vivid are the other words of our old speech, *eaxlgestealla*, “shoulder-comrade,” or he whose place is at the shoulder of his lord; and *heorðgenéat*, “hearth-comrade.” Another word, often used in Anglo-Saxon law, is *ðegen* or “thane,” with the prevailing notion of service,—such service as a freeman might, without loss of dignity, render to a powerful nobleman or prince.¹

Mediæval survivals and new creations are often inextricably entangled, and it is not safe to trace the simple *comitatus* of German forests amid the varying phases of the feudal system. Confining ourselves to the earlier compact, we may assume it to have been sometimes temporary, but often permanent. We need not idealize it too highly; the arrangement was obviously good for both parties to the bargain, and there were substantial presents, swords, horses, jewels, land, for the ambitious clansman to keep before his eyes.²

The age at which a warrior, whether in the militia or in the *comitatus*, began his career differed, it would seem, for different Germanic tribes. Holtzmann³ collects the evidence, which fixes twenty years among

¹ See Schmid, *Ags. Ges.* Glossary, *s.v.* and the well-known anecdote of Lilla, the dearest thane of Edwin, king of Northumbria; an assassin aims his dagger at the king; the thane leaps before his master and receives the blow.

³ *Germ. Alter.* p. 196.

the West-Goths, eighteen for the Lombards, and — if one can believe it — twelve for the Anglo-Saxons and Franks. For later times and customs, we have a vivid picture of the military coming of age given us in the Nibelungen Lay, where the festival is described which Siegfried's parents give in his honor for such an occasion; but here the old simplicity has been succeeded by a number of feudal and chivalric elements.

CHAPTER IX

SOCIAL ORDER

The king originally a creation of the race — His authority and duties — Inheritance and election — Ideals — The queen — Nobles by birth and by office — The Germanic freeman — The freedman and the slave — The alien.

AT the head of the family we found, of course, the father; and at the head of the state we naturally look for the king. The word "king" means the child or son of the tribe, its representative or even creation;¹ man of race, man of rank. Gradually the king ceases to be regarded as a creation of his race; his ancestry is pushed back to the gods, and his right is quite above all sanctions of popular choice or approval. The early Germanic king was still a creation of his race; true, as Tacitus tells us, he was chosen on account of his noble birth, — but he was chosen. ✓ A number of Germanic tribes can be named which have no king in their earliest historical period; such were

¹ "He who belongs to the race," explains Waitz, *Verfassungsgesch.* I. 326; and so interpret Curtius and Scherer. Arnold seems to take the same view: *Deutsche Urzeit*, p. 333. Grimm, *R. A.* 230, will not derive *king* from *kin*. For details of Germanic kingship, see Rosenstein, *über das altgermanische Königthum* in the *Zschst. f. Völkerpsych. und Sprachw.* VII. 113-188; and Dahn, *Die Könige der Germanen*.

Marcomanni, Franks, Lombards, and Anglo-Saxons.¹ The great movement of tribes which begins German national history, lays the foundation of saga and epic, and crystallizes a mass of myths into a system, was also the chief factor in the development of early Germanic royalty. A constant struggle demands constant leadership; and the republican elements of our old constitution disappeared rapidly in the presence of perennial warfare. Out of a mass of small democracies or elective monarchies, arose at last the great nations of the Franks, the Bavarians, the Alamanians. The popular assembly became impossible, except in compact England, which built up a representative system.² Monarchy of some sort, it is true, was probably inherent in the earliest Germanic constitution; but it sat lightly on the state, and in the time of Tacitus there seems to be a distinction in the Roman mind between the German tribes that had kings and those that had none.³ The kings who, according to Tacitus, were chosen on account of their nobility of birth, and the leaders (*duces*) who were chosen for their valor, were alike of the best blood of the race. Where a single monarch did not reign, princes or chieftains (*principes*) of the foremost

¹ Von Amira in Paul's *Grdr. d. germ. Phil.* II. 2. 126. Tac. *Germ.* VII.

² Rosenstein, work quoted, p. 163.

³ Waitz, *Verfass.* I. 295. Gregory of Tours speaks (II. 9) of long-haired kings (*reges crinitos*) chosen from the noblest families; and Beda, in a famous passage (*Hist. Eccl.* V. 10), about the continental Saxons, says that "they have no king, but several lords that rule their nation; and when any war happens, they cast lots indifferently, and on whomsoever the lot falls, him they follow and obey during the war; but as soon as the war is ended, all these lords are again equal in power." — Transl. of Giles.

clans made up a sort of oligarchy; and we hear of a king with associated or inferior kings ruling over one people.¹ In time of war, out of several such chieftains (*principes*) might be chosen a leader (*dux*), as in the case of Arminius. Indeed, the Germans seem to have been fond of two leaders even in war; Waitz cites the case of Hrothgar and Hrothulf.² Moreover, we must note that Tacitus uses the expression "take" or "choose":³ "they⁴ take to themselves" kings or leaders, as the case may be. Jacob Grimm describes this elective monarchy as one where inheritance was modified by the necessity of confirmation, and election was modified by restriction of choice to the royal family.⁵ Thus the Cherusci sent to Rome for a person of kingly lineage who happened to be the sole survivor of his race; for the nobility, says Tacitus, were destroyed by civil strife.⁶ The Anglo-Saxon genealogies, mounting always to demi-gods and gods, show the stress laid upon kingly descent; though we must in this case allow for the abnormal conditions of ceaseless raids, and a considerable concentration and increase in royal authority.

The newly elected king was lifted upon a shield and thrice borne about the assembly. He made as soon as possible a formal progress through his domin-

¹ A passage in *Béowulf* (vv. 2152 ff.) tells us that after the hero's liberal presents to King Hygelac and his queen, the monarch presented his kinsman Béowulf with a splendid sword, and also gave him "seven thousand, a house (home) and ruler-seat (*i.e.* dominion, royal power)." The "seven thousand" may refer to money or (Kluge, *P. B. Beit*, IX. 191) to land. See also Waitz, *Verfass.* p. 330.

⁶ *Ann.* XI. 16: "amissis per interna bella nobilibus, et uno reliquo stirpis regiae."

ions, that he might be seen and known of all his folk. His external tokens of royalty were originally meagre, and the flowing locks he shared with all freemen. Crown and such insignia are later matters imitated from the Romans; but a military standard of some sort was doubtless borne before the German king. In peace his functions must have been judicial, and often sacred or priestly; though this was not always the case. In historic times the priestly function was a royal duty for Scandinavia, but not for Burgundian and other German monarchs. Many a race made a god of its departed ruler; particularly when he had won wide lands or brought new culture and social order into his dominions, deification was likely to follow his death.¹ But in war was the chief strength of a Germanic king; to his personal conduct of a campaign was due success or failure, and as he was to keep peace within his own borders, so he was expected to spread desolation or conquest beyond them. Failure was fatal. As he had been elected, so he could be deposed. The centre of ancient Germanic states was the popular assembly; and a king was its creature, to be deposed if he were not equal to his task, but doubtless to hold authority amid comparative awe and silence so long as he was successful. In times of peace he had no authority whatever to issue decrees, make laws, or initiate any sort of legislation; he was executor of popular law and popular will. Progress in kingly power is marked by the oath of fidelity; and with the anarchy of war and conquest, kings must have acquired, little by little,

¹ See also von Amira in Paul's *Grdr.* II. 2. 126, 135.

that sense of proprietorship and absolute right which distinguished mediæval royalty. The church lent her authority to make personal and individual that doctrine of divine right which before had been distributed over a whole family, and the elective kingship of old Germanic days was lost beyond recovery for feudal Europe. One land alone held fast, if not to the old form, at least to the old principle; and it was England which by incessant struggles on the soil of two continents sustained, despite all reactions, the genius of Germanic freedom side by side with the derived reverence for law and discipline. The constitutional history of England properly treats these matters; suffice for our purpose a single sentence from the close of the introduction to Alfred's laws for his people: "Now I, Alfred, king of the West-Saxons, have showed these to all my Witan, and they have told me that it liked them all that everything should be kept." The Witan, as everybody knows, were the legal councillors or advisers of the king, and in a measure representatives of the people; thus we need assume no great change, except in circumstances, from the Germanic king and the Germanic assembly.

Of this Germanic king, prince, or leader, we have many descriptions in praise and in blame. At the opening of *Béowulf* we are told what was for those days a good king: —

He waxed under welkin in worth and honor
till the folk around him, far and near,
across the whale-road¹ hearken'd to him,
tribute gave him: good, — such king.²

¹ Sea.

² *Béow.* 8 ff.

The secret of prosperity — so, at least, the singers have all said — lay in liberality to the royal retainers; and so our *Béowulf* goes on with its ideal picture: —

Thus becomes it a youth to quit him well
to his father's friends with fee and gift,
that to aid him agéd in after days
come willing clansmen, should war draw near him,
to help their prince. . . .¹

The free-handed monarch is praised by Widsith in our oldest English poem: —

Likewise with Ælfwine in Italy was I:
of all mankind I ken, he cherished
heart most ungrudging in gift of rings,
sheeny treasure, the son of Eadwine.²

The ideal king at home was the “ring-breaker,” who sat upon his “gift-seat” or throne, and dealt out treasure from an inexhaustible store, while tribute flowed in from countless subject tribes, and hostility was paralyzed by the memory of his former deeds. To this conception belong those epithets for royalty which emphasize the bond between the ruler and his folk, those “kennings” which call him, if a Hrothgar, “friend of the Scyldings,” *wine Scyldinga*, or “refuge for earls,” *eorla hléo*; and which often combine the virtues of friendship and generosity, as in “gold-friend of men,” *goldwine gumenena*, a kenning which occurs in *Béowulf*'s petition to Hrothgar that the latter may remember his promise and be a father to his guest: —

. . . of what we two spake,
gold-friend of men, be mindful now.³

¹ *Béow.* 20 ff.

² *Widsið*, 70 ff.

³ *Béow.* 1474 ff.

Other kennings¹ of this peaceful connotation are: treasure-lord, treasure-herdsman (guardian), gold-giver, hoard-ward, wish-giver, ward (guardian *par excellence*), folk's-ward, warriors' ward, folk's-herdsman, helmet, people's protector, caretaker of folk, friend (*par excellence*), lord-friend, folk's owner, lord of men, judge, lord and judge, first in the land. Of a warlike origin are: helmet of armies, leader of squadrons, leader of the people, first in deeds, "the first spear (*frumgâr*)," first in battle, battle-ward of men, army-leader.² It is from names like these, most of them old poetic forms, like the Homeric epithet, that we may best make up our conception of the Germanic king.

The queen was naturally a prominent figure; but the kennings for her are rare. "Weaver of peace" is of course applied to her; but "lady," *hlæfdige*, if like "lord" it comes from the notion of loaf-sharing, is a wider term. That women now and then exercised royal functions, we learn not only from the famous Lady of the Mercians, but from the older case of the Gothic queen Amalasintha. Offices of gracious hospitality we have already noticed in the queen of Hrothgar;³ nor, as representative woman of the race, could she have failed to enjoy a rich measure of that reverence which the Germans paid to her sex.

Besides the king and the leaders of the people, we must allow for an order of nobles, men whose birth

¹ I draw liberally upon Wilhelm Bode's *Die Kenningar in der Ags. Dichtung*, Darmstadt und Leipzig, 1886.

² Similar Scandinavian kennings in Vigfusson-Powell, *C. P. B.* II. 479 f.

³ Above, pp. 117, 134.

and alliance with princely houses raised them above the rank of ordinary freemen. The name of this noble quality is preserved in the German *Adel*, and in the Anglo-Saxon *æðeling*, with the general notion of "race," "descent." The *wergild* was based chiefly on birth and rank; although age, sex, office, and connection with the king were also criteria.¹ The honor of birth was not the honor of office, but was rather an inherent, one might say passive, distinction. If there were duties as well as privileges connected with it, the former doubtless lay in priestly and judicial responsibilities. By old custom, the head of a house was its priest as well as judge and ruler. Nobility, we may assume, entitled men to a prominent place in war;² and in time of peace, forms and ceremonies of the state religion would call for officials from the families to whom tradition gave divine or high heroic origin. Indeed, the theory that priesthood was an avocation and not a regular caste or calling is strengthened by the remarkably small part it played in opposition to Christianity; it is Coifi, the Northumbrian priest, who leads in the attack upon the altar of his gods.³

The Germanic nobles were thus the oldest and most venerable families. We hear of them in Tacitus, who pays them an enemy's generous tribute in an account of battles among the Batavians.⁴ Whereas in

¹ Waitz, *Verfass.* I. 195 f. The Angli and Werini had for the noble a *wergild* thrice as great as for the ordinary freeman.

² Waitz, p. 280.

³ Waitz, *ibid.* See also Beda, *Hist. Ecc.* II. 13: "Cumque a . . . pontifice [*sc.* Coifi] sacrorum suorum quæreret [*sc.* the Christian bishop], quis aras et fana idolorum cum septis, quibus erant circumdata, primus profanare deberet; ille respondit: Ego. . . ." ⁴ *Ann.* II. 11.

historical Anglo-Saxon, the word *æðeling* always means a member of the royal house,¹ in older times, notably in our epic *Béowulf*, as also in many proper names familiar to all of us, it had a wider signification, and meant a man of noble blood, a man of "descent." Again, even before Danish influences made our old word *eorl* denote a special title of nobility like the Scandinavian *jarl* (Hakon Jarl),² there must have dwelt a certain odor of eminence in the term, as opposed to *ceorl*, "man" of any sort. Nobles were of better clay than common freemen; and the founder of their race being deified, his home worship, at first the regular manes-cult, would pass into symbolic rites and then into poetical traditions. To men of this stamp the minstrel sang about the deeds of their forebears, divine now, and now heroic. "We have heard," begins the singer of *Béowulf*, "how in days of yore the æthelings did valiant deeds." Similarly, the nobles of the middle ages found chief delight in a lay which celebrated their ancestors; and such legendary songs were as indispensable to a genuine noble as the family pictures to the gentleman of to-day, and often as open to suspicion.

In course of time, and by reason of the ceaseless wars of the wandering, this old nobility of the Germanic clans died out; its place was taken by the *comitatus* and the official nobility springing up about powerful kings, until the new order became, in its turn, hereditary. Of the great English officials, chief place belongs to the so-called "alderman," who was representative of the king for a given shire or other

¹ Schmid, *Ag. Ges.* p. 527; cf. also Stubbs, *Const. Hist.* I. 151.

² Cf. von Amira in Paul's *Grdr. d. germ. Phil.* II. 2. 113 f.

division of land. Such an alderman is the high-hearted Byrhtnoth;¹ he collects and leads the royal troops against all enemies of the king, maintains order in his district, and occasionally presides at court. The alderman seems to have been a creature of the king, but with consent of the *witan*.² Later, the Danish "earl" took the Saxon *ealdorman's* place and privileges; but the word had acquired a general connotation of superior rank.³ "He came to the town-reeve, who was his alderman," quotes Schmid from Beda; and we find a curious passage in the *Leechdoms* (Herbarium), where mention is made of *Achilles þe ealdorman*.⁴ Other examples of this domestic rendering of foreign rank may be found in an Anglo-Saxon homily, where Christ is called an *æðeling*, Moses a *heretoga* or leader, the saints *þegnas*, thanes or warriors, and the Jews in Egypt, — foreigners, of course, — *Wealhas*, "Welsh."⁵

Ownership of land was ultimately the test of gentry; but it could not have made so prominent a part of the Germanic noble's credentials.⁶ Still, such traditions best flourish on the soil which produced them, and the connection of tracts of land with a given noble family must have been an early factor in

¹ See p. 237.

² Schmid, *Ags. Ges.* 560.

³ It was probably unknown to continental Saxons, though used by the Frisians. Cf. Waitz, p. 215.

⁴ Cockayne, *Leechdoms*, etc., I. 308. The "satraps" (*satrapæ*) or governors, whom Beda (see above, p. 271) mentions among the Old Saxons, are rendered by *ealdorman* in Alfred's translation. See Stubbs, I. 42.

⁵ Another classification of ranks, found in the homilies, is 1) *oratores* (clergy); 2) *bellatores* (warriors); 3) *laboratores*.

⁶ Historians disagree. Cf. Waitz, I. 167 f., and Stubbs, *Const. Hist.* I. 155.

the pomp and pride of nobility. The amount of land held by a person determined in Anglo-Saxon law the amount of his *wergild*. Blood was the origin of rank; it meant more than property, and far more than any station or command. Certainly, for the earliest times at least, we must not think that office and nobility were convertible terms.¹

The unit of Germanic public life was the freeman, the son of a free father and a free mother. True, old and vague traditions made the mother alone responsible, and, based on that original maternal system to which reference has been made above, founded the maxim of "free mother, free child"; but a later custom caused the offspring of free and unfree to "follow the worse hand," whether maternal or paternal.² Further, the freeman might be created from an unfree man by course of legal ceremony, or as in older times, by adoption. If our old word "earl" rightfully convey, even before the Danish influence, an echo of nobility, it is no fault of the ancient German freeman that the name "churl" stares at us moderns with such a stupid and ungracious air. This is a commentary on the havoc wrought by wars and conquests upon the old Germanic constitution. The freeman of the Norse *Rígs MÁl* is named "Karl"; and an old Holstein form of administering the oath, to freemen of course, reads: "Step up, ye *Kerls*. . . ." ³ Grimm finds the name not only in Carloman, but in the word for king (*kral*), used by Slavs and Lithuanians, and derived from the founder of the

¹ Waitz, p. 243. Loebell, *Gregory v. Tours*, pp. 87, 392 ff.

² Scandinavian law gave benefit of the "better hand." See von Amira in Paul's *Grdr.* II. 2. 112.

³ R. A. 166.

German empire.¹ So the Anglo-Saxon form *ceorl* seems to have meant "man"; that is, of course, the normal man, the freeman. Significant is the dignity of the word in our *Béowulf*. When the hero is planning his errand of mercy to help King Hrothgar, "wise men" praise his purpose and encourage him, — *snotere ceorlas*.² The word is applied to the warriors and courtiers of the Danish king; and twice, with the epithet "old," it is used of royalty itself.³ This is for the heroic age: in the laws *ceorl* drops to the two meanings "husband" (among animals we find *carl* as a prefix indicating the male of a given species) and "countryman" or "peasant."⁴ In one old law, however, it is used in the ancient sense of "freeman." A more descriptive name is preserved in an account of the heathen Saxons (continental) written by Hucbald in the tenth century,⁵ who in turn partially quotes Nithard, the grandson of Charles the Great, whose material was close at hand. It is noted that the Saxons had no kings, but were divided into three classes, called in their own tongue *edlingi, frilingi, lassi*. The *friling* is our freeman.

The freeman (*capillatus*) was distinguished by his long, flowing hair, and by his arms, the so-called folk-weapons.⁶ The Salic Law ordains severe penalties against any one who shall cut or shave the hair from a *puer crinitus* without the consent of the latter's parents; and on the other hand, for people to let a slave's hair grow long was criminal offence. The freeman had the right of waging private feud, so far

¹ Ibid. 282.

⁵ Life of St. Lebuin. See Stubbs, I. 42 ff.

⁶ *R. A.* 283 ff.

as the increasing severity of legislation did not bar his way. He was member of his village and district assemblies, as of the larger council of his tribe; among people like the Saxons this meant self-government. As long as the freeman was mainstay of the state, Germanic freedom kept its vigor; with his decline, we pass into the tyrannies of feudal Europe, where nobility and serfdom, spreading out their borders, left scant space between them for the honest *friling*.

We need here delay no longer with the freeman, for it is about his life that all our task revolves, and whatever has been said without explicit limitation, belongs to his account. We turn, therefore, to that class which, being neither bond nor free, offers considerable trouble to the exact student of our constitutional history. Manumission from slavery gave rise to the so-called freedmen. These, if we may venture a broad assertion, seem to have been without the tasks of slavery or the privileges of citizenship. Among Anglo-Saxons, a lance and a sword, emblems of the freeman's rank, were handed in symbolical ceremony to the person thus released; but he did not thereby become peer of the freeman, and even his descendants remained in a class by themselves, between the freeman and the slave.¹ Such a subordinate rank, moreover, was doubtless held by men who submitted in a body to some conquering tribe and were allowed to keep land and liberty; their seeming freedom was a concession, not a right. On the same

¹ The *wergild* followed the shades of unfreedom down to the actual slave, who had none at all. See also von Amira in Paul's *Grdr.* II. 2. 118 f.

footing were foreigners, whom our ancestors everywhere called "Welshmen." The specific name for this class of freedmen among Low Germans was in Latin form *litus*, in Frisian *let*, and in our own Kentish dialect, *læt*.¹

There must have been a wide range of privileges among this class, scanty enough in some instances and little better than a slave's "seven hundred and twenty loaves of bread a year," but running up to very solid benefits. The freeman who for bread and clothes, or, in those old times, for a gambling debt, went into voluntary subjection to another man would be in any event better treated than the outright slave.² The church, working as a rule on lines of humanity, interfered in many ways to help the bondman and make his lot more tolerable. Private agreement between superior and inferior would further complicate the once simple conditions and create new degrees of servitude,³ with a general drift towards fixed limits of work for corresponding wages. As the Germanic freeman ceased to be the most prominent factor of national life, the freedman, especially when a creature of the king or of some high official, became more and more important and could rise, like the Roman freedman, to exalted office. The old noble, the old freeman, had seen their day; kings and the tools of kings began their long career.

From this stage of the freedman let us look back

¹ Found in a single law of Æthelberht, which fixes a *læt's* *wergild*. Schmid, p. 4.

² Tacitus, with a touch of rhetoric, says that shame compelled the winner to send the loser into a distant place, as he could ill rejoice in such a gain. *Germ.* XXIV.

³ *R. A.* 335, 337.

at his predecessor in the days of Tacitus.¹ “The freedmen (*liberti*),” he tells us, “stand but little above the slaves; they are seldom of any consequence in the house, and never in the state, if we except those races which are under the rule of kings,² for there the freedmen are superior to noble and freeborn alike. With the other races, however, the low standing of the freedmen is a proof of liberty.” The freedman, in this sense, is probably of common Germanic origin; at least he is found in historical times among all Germanic races save the Gothic and Scandinavian.³

Lowest of all was the slave, a chattel, with no “man-worth” at all, no *wergild*. The murder of a slave was paid for as one now pays for damages inflicted on a neighbor’s horses or cattle. Yet we may be sure that slaves were no worse off in barbarian Germany than in civilized Rome, where the punishments inflicted on that wretched class were elaborately cruel. German slaves had no such artistic and systematic ill-treatment; they might be killed in a sudden fury of the master, but escaped the harder persecution of joyless years.⁴ It is remotely possible — though this flight needs all the wings of romantic fondness — that a love of freedom, the intense passion for absolute liberty of the individual, may have held back many a freeborn German from subjecting his slaves

¹ *Germ.* XXIV. By *liberti* Tacitus probably means those who have acquired freedom in whatever way, hardly a regular class of the community.

² “*Gentibus quæ regnantur.*”

³ Waitz, I. 154.

⁴ Anglo-Saxon ordinances of the church fixed a penance for the man who slew his serf without judicial authority. Kemble, *Saxons*, I. 209.

to scourge and torture.¹ Again, the Germanic slave had some solid privileges which were denied to his Roman brother. The slave lived in his own house, and paid his owner a stated rent in corn or cattle or woven garments;² and there is a note of domesticity in the Roman's statement that a German serf has his own household gods, and rules over his own fireside, — *suos penates regit*. Then follows the remark that a German seldom beats his slaves, or puts them in chains; a sudden tempest of anger will make him kill his serf, but slow punishment he ignores. The simple conditions of German life required no army of slaves, no elaborate divisions of labor, as at Rome. Where it was possible, Germans sold their slaves to more civilized masters, as the Goths sold their own conquered kinsmen. These northern giants were sought as slaves in Rome; and we all know Beda's account of Gregory and the fair-haired Anglian youths in the Roman slave-market. Slavery, one may say, was only an accident, an external thing, in the Germanic state; the freeman was the state, and a widely ramified system of slavery would have sapped the foundations of that barbaric strength. Splendid is the tribute which Tacitus pays to this Germanic prowess and this Germanic freedom.³ "Not Samnites nor Carthaginians, not Spain nor Gaul, not even the Parthians, have given us sharper warnings. For mightier than the Parthian throne is the freedom of the Germans."

¹ Anglo-Saxon slaves were cruelly treated. See Wright, *Domestic Manners and Sentiments*, p. 56 f.

² Tac. *Germ.* XXV. Later duties of the slave, cf. Grimm, *R.A.* 350 ff.

³ *Germ.* XXXVII.

The chief origin of slavery must be looked for, as Grimm remarks, in the captivity of a conquered tribe. The whole race of Germans may have subdued an indigenous population at the settlement of the country; those "blond long-heads," as Huxley calls them, may have conquered "brunet broad-heads" or what not, and so have laid the foundations of their slave system; but this can be neither proved nor disproved.¹ In historical times, the more capable and intelligent prisoners of war were used or sold as slaves, after a definite number had been sacrificed to the gods. Years after the victory of Arminius over Varus and the legions, Romans taken at the battle were found serving as slaves among their German captors. Children of such captives would naturally form a class of serfs; and even in cases where one of them married a freeborn person, the offspring, as we have seen above, would in most cases count as slaves.² Indeed, to marry an unfree person often led to slavery. Again, we may add to these causes of serfdom the too common cases where hunger and destitution forced a man to give up his freedom. Kemble quotes a case where an Anglo-Saxon lady in her will frees all those who had been forced into slavery through poverty and hunger — "all who in the evil days had bent their heads for food."³ Hopeless debt made many a slave; and the descent from freedom into thralldom was facile enough. The church and the laws, while they enjoin forbearance and

¹ See also Waitz, I. 158.

² *R. A.* 324.

³ *Saxons*, I. 196. For other causes cf. *R. A.* 330 f. For legendary accounts of the origin of slavery, see, of course, *Rígmál* and references of Elze, *Englische Philologie*, p. 212.

mercy as far as possible, make no question of the fact itself. A law of Æthelred, repeated by Cnut, runs as follows in Cnut's version: "And we command that one shall not all too easily sell Christian men out of the country, certainly not send them among the heathen; but let it be seen to that the souls which Christ has redeemed with his own life be not brought to destruction."¹

The sign of the slave was his close-cut hair, and, often, the marks of mutilation in his face, "A slit nose is the mark of a thrall," says Scandinavian law.² Slaves were maimed or lamed for the sake of security, though this precaution must have been sporadic among the Germans; the capture of a whole army, for instance, may have made necessary something of the sort. We may be sure that no sentiment would have forbidden it. The slave had no family name. He wore short, scanty garments, with dull colors and rough material. He bore no weapons; had no right to go away from his master's land; and naturally took no part in the popular assembly, whether to vote as a citizen, or to prosecute as an accuser in process of the rude civil law. He could marry only with the consent of his lord, and in that case even was obliged to pay a marriage-tax. It is perhaps well to note that recent investigation has exploded several venerable legal fictions about the Germanic slave; for example, that bit of historical horse-play, the theory of a *jus primæ noctis*.³

¹ Schmid, pp. 272, 228. In the earlier law there is a proviso, "unless the person have duly forfeited his liberty." ² R. A. 339.

³ See Kemble's account of Anglo-Saxon slaves, *Saxons*, Chap. VIII., and especially p. 214.

A peculiar position was that of the stranger or visitor in a Germanic community. He is called "the far-comer," or simply "comer," "stranger," "he who has come over the mark"; one name for him, "guest," is the same word as Latin *hostis*, which so easily passed from "stranger" into "enemy." German *elender* and English "wretch" have acquired their present meaning from the connotation of the older words which meant nothing more than an "outlandish" man, an exile. Originally such a stranger had no legal protection whatever; he was dependent on individual hospitality,¹ and otherwise was subject to maltreatment and eventual slavery. In some cases the old laws enjoin hospitality as a part of private if not public morals; and the binding law of three nights' entertainment we have already noticed.² It is a proof of the artistic design of Tacitus that he sets the hospitality of the old Germans so sharply and immediately in contrast with their family feuds.

Little by little, as commerce increased, and the stranger was oftener seen in Germanic lands, stability and development of trade made it necessary to protect him. This right, or duty, fell upon the king; royal protection was extended to the foreigner and laws were passed in his favor. The king was thus the guardian of all wayfaring men from other lands; he was their *mundbora*, and therefore had a right to their estates, later to a part of their personal property. With the settled international life of mediæval Europe, the stranger becomes in every nation a permanent object of legal protection.

CHAPTER X

GOVERNMENT AND LAW

Gifts, not taxes—Organization of government—Elements of monarchy and of democracy—Popular councils and assemblies—The town-meeting—Legal system—The function of priests in civil administration—Punishments for crime—Forms of law—Ordeal and trial by battle.

IN Germany and certain other European states, where every sound man must learn to use weapons and fight at need for his fatherland, military duty would perhaps stand first in a list of the good citizen's obligations to his country. But we may be very sure that the second duty would be to pay one's taxes. This the early German did not do,¹ but instead he made presents to his chieftain, sending him goodly gifts in corn or cattle. We know how long the excellent memory of monarchs treasured up this custom; Queen Elizabeth, we are told, took care that what she received on a New Year's day should always largely exceed her own benefactions.² Yet these gifts of the early German were presents pure and simple, no taxes, no prerogative of the prince. Even of booty and plunder in war the king might take no more than his share as a warrior, and the division

¹ *Germ.* XV.

² Brand, *Antiquities*, "New Year's Day."

was not one of choice: all was left to the lots. It is on the margin between the old dispensation and the new rule of kings that we meet that famous vase of Soissons. A bishop asks the mighty leader of the Franks for a vase of extraordinary beauty which had been taken with other plunder from the church. The king promises it to the bishop if it fall to the royal lot — no very near chance; however, he goes to his warriors and begs the vase as a favor to royalty, not at all as a right. The warriors assent; but one man, striking the vase with his battle-axe, cries out, "Claim nothing but thy lot!" The king takes no steps against this gross defiance, but contents himself with sending the vase to the bishop; until, at the next great assembly of the nation, and before the whole army, he fells the objector to the earth, crying, "That for thy blow upon the vase at Soissons!" No one dared a word or act of protest.¹

Conquered land was at first shared in this fashion;² but later, as among the Anglo-Saxons, the king took a special part for himself. The old maxim, however, held the freeman exempt from all taxation: *frei mann*, it said, *frei gut*.³ What was not exacted by direct law came, nevertheless, to be demanded by custom as well as by the growing importance of the king. In addition to yearly gifts, there was imposed upon freemen the necessity to entertain and harbor the sovereign with his retinue, to aid him in war, and to contribute horses and wagons for the royal need. Little by little, custom hardened into law and recognized the definite nature of taxes; among the earliest of these direct burdens

¹ Gregor. Tur. II. 27.

on land, Grimm counts the church tithes.¹ Nor was this taxation, even in its milder form, altogether without the consent of the taxpayer. He was represented, or else took a direct part, in the councils of his nation. Every freeman was member of this General Court.² Whether these popular assemblies counted for more or for less than the royal authority, is a perplexing question, and historians have had no difficulty in seeing now a monarchy and now a republic in the old Germanic communities. We do not know how far judicial and executive organization had made progress, nor how many elements of the modern state were present. Probably, when Tacitus wrote, there was a fairly organized government, — if such a name may be applied to a community so loosely united, — since it often took three days for the popular assembly to come together at the season of new or full moon, and it is reasonable to suppose with Holtzmann that this could not have been the case with members of a single canton. Wider groups indicate firmer organization;³ probably we are not far out of the way when we assume that the early Germanic state inclined to democracy in peace and to a monarchy in war. The continental Saxon village had a sort of governor who ruled over his own district while peace was maintained; when war broke out, these governors, or, as Beda calls them, satraps,

¹ *R. A.* 300.

² For the later decline of the Germanic freeman, especially the Anglo-Saxon, see Stubbs, earlier pages; and also Green, *Short History*, p. 90.

³ See Stubbs, *Const. Hist.* I. 26 ff.; Waitz, *Verfassungsgesch.* I. 201 ff.; and such works as Seebohm's *Village Communities*; G. L. Gomme's *Primitive Folk Moots*; and the valuable studies of Professor E. A. Freeman in books and essays.

chose by lot one of their own number for the supreme command, which lasted until the close of hostilities.¹

Popular government was clearly recognized even by the later kings, who went through the form of appealing to the great council for sanction of the royal deeds. In *Béowulf* we read of the Danish king sitting with his council in anxious deliberation how they may resist the attacks of Grendel.² Alfred tells us that he drew up his code of laws with the advice of his *Witan*.³ Among the Saxons and Frisians, where Roman influence was never strong, and where we may find the origin of our own institutions, "local self-government" seems to have been the rule whenever the nation was at peace. The northwestern districts of Germany have always shown more or less republican spirit; though an irresistible current swept them — with what difficulty, Charlemagne could tell — into the grasp of monarchy. This change and concentration of government is very marked. Dahn notes that at the great battle in 357, Alamannians had twelve so-called "kings," evidently mere local leaders; whereas in the fight against the Franks in 496 there was only one king of the Alamannians.

In the time of Tacitus, general government rested in the assembly or moot (Anglo-Saxon, *gemôt*) of larger and smaller districts. The exact nature of these districts — canton, hundred, mark, community, what not — has been the subject of much discussion; but it seems clear enough that representative bodies carried on such government, local or general, as ex-

¹ See the whole passage, Bede, *Hist. Ecc.* V. 10, and above, p. 271.

² *Béow.* 171 f.

³ Schmid, p. 68.

isted outside of the conduct of war. The folk-moot was the central fact of public life and public interests ;¹ and the *Campus Martius* of the Carolingians, the shire-moot, the town-meeting, are continued and different forms of the same old institution. The privilege of belonging to this primitive body was rated high ; the right of attendance was withdrawn from no freemen whatever save only those who had been guilty of the crime of crimes and had left their shields upon the field of battle.² The meetings of the tribes were held at full or new moon ;³ but for the larger assemblies, where a whole race convened, two meetings in the year were probably sufficient, and naturally coincided with the times of the great heathen feasts.⁴ Daytime — “ holy is the day ” — was the legal limit of session. The summons for an extraordinary assembly may have been, as in later times, a stick, an arrow, or the like ; perhaps even a hammer for the court.⁵ The place of meeting was under the open sky, high and prominent ; and was at or near some place sacred to the gods — mountain, meadow, fountain, tree. Even the high-road was a favorite place. Local assemblies in England and elsewhere were held by preference under sacred and memorial trees, of which the chief are linden, oak, and ash.⁶

⁶ G. L. Gomme, *Primitive Folk Moots*.

What was done at these assemblies? Naturally, business varied with the size and character of the gathering. Tacitus tells us of an embassy sent by one German tribe to another, and received in full assembly, where proposals were considered regarding a combined and systematic opposition to Roman rule.¹ Further, we are told in the *Germania* that important matters were discussed by the people, minor affairs by the chieftains; and as in modern times, so then, we may be sure that influential men knew how to guide the sentiment of the meeting. Executive or presiding officers were few and of vague functions; there was little need for such men when individual freedom was so great and the execution of law so limited. Of ancient origin, we may assume, was the town-reeve,² for he is mentioned among the old Saxons as the *villicus*,³ which is the same as Alfred's *tûngerêfa*. He was probably elected by the smaller community, and presided over its councils: over the larger assembly presided a high official — prince or even king.

The assembly was under the protection of the tribal gods, and was opened by a command of silence from the priests, who thus imposed conditions of peace upon the gathering. At the beginning of the Old Norse *Voluspa*, "The Sibyl's Prophecy," we find this solemn call for silence on the part of all peace-loving mortals: "Be silent, all men, high and low." Moreover, the priests, as executives of divine command, had power to punish such as might defy their authority, and through their persons insult the majesty of the patron gods. The session thus opened,

¹ *Hist.* IV. 64.

² Waitz, I. 136.

³ Beda, *Hist. Ecc.* V. 10.

distinguished men of the tribe are heard in behalf of whatever proposition is before the meeting. If the people approve a man's speech or recommendation, they clash their weapons lustily together; if they disapprove and dissent, there is an ominous murmur.¹

Religious ceremonies were doubtless abundant at such a meeting. The custom of casting lots, described by Tacitus,² is under the charge of the state-priest "if it is upon a public occasion." An example of the use of such lots in deciding a public question is quoted by Waitz³ from the *Vita Anskarii*. A king of Sweden consults the gods by lots to see whether or not he shall allow Anskar to bring forward his plea for Christianity. The judgment is favorable, and the king submits to his people the question of a new religion. Many other ceremonies of divination and enchantment even were doubtless common at such an assembly, but are more properly considered under the head of religious rites.

Aside from religion and diplomacy, the business of these meetings must have partaken largely of a legal character.⁴ With the exception of small villages, every district made a court out of its general assembly;⁵ and it is Grimm's opinion⁶ that the whole assembly of freemen heard and judged such causes as came before them, — questions of public interest, transfer of land, settlement of personal disputes over property, the enfranchisement of slaves, the award of *wergild*, the ceremony of a free youth's admittance to the privi-

⁶ R. A. 745.

leges of citizenship, and similar affairs. Something of this same sort was the Icelandic *Thing*. An officer presided over the Germanic court, a sort of judge, whose token of office was a staff, mostly white in color,¹ and who often sat upon a conspicuous seat hewn out of stone. Some curious old laws enforce upon a popular judge that he shall sit with one leg over the other; and other laws, not so curious, insist that he shall keep himself clear of drunkenness. In such courts of the historical period, the judge faced the east; on his right was the plaintiff, and on his left the defendant, who thus had to take the north, a quarter of bad omen.² True, these are late customs, but their roots not improbably strike well into the most ancient judicial practice. Doubtless, too, many old ceremonies were retained by the famous *Vehmgericht* of Westphalia, to which we have already referred,—that Vigilance Committee in the grand style which served as almost the only curb upon a lawless age; which, like its prototype, the old Germanic assembly, held court under free sky, had no secret chambers, no tortures, and executed its decrees with unerring certainty by hanging the convicted offender to the nearest living tree.³ Nor are the collections of Germanic law so very recent in date. The earliest codes were probably poetical (alliterative) in character so as to be more readily retained by the memory. The Goths had their system of laws; but the earliest Germanic code preserved to us is the Salic Law, about which so much

¹ R. A. 761.

² R. A. 808.

³ For a salutary rebuke of the nonsense written about *Vehmgerichte*, see Dr. Wächter's little book already cited, p. 63 f.

misunderstanding has been spread abroad: it dates from the fifth century.

Although Tacitus is authority for the statement that priests were charged with the execution of decrees, as well as with ordinary punishments, a recent writer is very decided in his assertion that common law as administered by these courts was a matter of tradition and the direct affair of each voting and deliberating freeman. Much of the sacredness attaching to law, he says, has been the result of Christianity and was foreign to our heathen system. Nor was there, he adds, any hieratic monopoly of law; it was not kept, recorded, and interpreted by priests.¹ Nevertheless, we know on the authority of Tacitus that the priests were its executors. A pretty Frisian legend records the sacred sanction of law. King Karl orders twelve men to be chosen from Frisian land in order that they may determine what is law in Frisia. Unable to do as he bids, these twelve men beg a respite, but after a week are still in doubt. Then Karl declares them doomed to death, but allows them to be set in a boat without sail or oar, and exposed to the sea. They beg God for help and ask him to send a thirteenth man to them (as Christ was to the disciples) to teach them what they need to know. Suddenly this thirteenth one is sitting among them. He rows them to land with a bit of wood, strikes the ground and causes a spring of water to gush forth, and proceeds to teach them all the law. This, thinks Richthofen, points to the old heathen customs, when a priest set forth the law.² Similar

¹ Von Amira in Paul's *Grdr.* II. 2. 41.

² Richthofen, *Friesische Rechtsgeschichte*, II. 456, 459, 488.

conclusions may be drawn in regard to Iceland. This Asega, Judex, Sapiens, — by all these names the Frisian interpreter of law is called, — seems to have a genuine heathen pedigree; he was the local magistrate of old.¹

Cases of public punishment are given by Tacitus and have been mentioned here under the head of cowardice in war.² The offender could be declared an outlaw, “*vogelfrei*,” as in the case when a murderer refused to give satisfaction of any sort. Moreover, there remain in modern collections traces of older laws which prescribe frightful forms of death; these horrors are nevertheless traditional and do not seem to have been enforced in historical times.³ But certain modes of execution, terrible enough, may be followed far back in Germanic records; such were death on the wheel, decapitation, stoning, trampling to death by wild horses, burial alive, flinging from a rock, drowning, burning, exposure to wild animals, and, for coast-dwellers, sending to sea in a leaking boat. In the north, a barbarous custom called “carving the eagle” — that is, on the back of the victim — finds frequent mention. Milder punishments were known, and records of the early middle ages tell of cutting off a victim’s hair, which thus deprived him of his external sign of freedom; whipping, — a pen-

¹ Richthofen, *Friesische Rechtsgeschichte*, 482.

² *Germ.* XII.

³ *R. A.* 682. Enforced, however, were the elaborate punishments for him who profaned a temple of the gods. In Frisian law such a criminal “*ducitur ad mare, et in sabulo, quod accessus maris operire solet, finduntur aures ejus et castratur, et immolatur diis quorum templa violavit.*” Richthofen, *Fries. Rechtsges.* II. 507. Compare *Tempest*, I. 1: —

would thou mightst lie drowning,
The washing of ten tides.

alty reserved for slaves; flaying; cutting off hand and foot, nose, ears, or lips; blinding; cutting out the tongue; breaking out the teeth; branding, and other less violent forms, down to a mere reproof by the proper authorities.¹ The Anglo-Saxon laws are very explicit in the definition and gradation of crimes; but while many penalties of mutilation occur, most of the punishments are in terms of money paid as fine and *wergild*. Adjustment of the *wergild* must have taken up much of the time in these assembly-courts. Fines were assessed — about collection we cannot feel so sure — upon criminals of every grade; and great complication arose from the difference made in the amount according to the rank of the injured party. Even verbal injuries and attacks upon honor or reputation were punished by fine, and this in some of the early Anglo-Saxon codes; to call a man a perjurer, for example, or to heap abuse upon him in the house of another, is punished by a fine of one shilling to the owner of the house, six shillings to the insulted person, and twelve shillings to the king.² Should royalty be even remotely concerned, the fine is increased. “If the king drink at a man’s house and any one shall commit wrong there, this one is to pay double fine.” — “If a freeman steal from the king, let him pay ninefold.”³ This is, of course, no criterion for primitive relations; but we are distinctly told by Tacitus that the Germans of his day had a system of fines which were assessed in terms of cattle.⁴ For less serious offences than those for which death was imposed, he says, there is a scale of punishments

¹ For details, *R. A.* 680 ff.

² Schmid, p. 12, § 11.

³ Laws of Æthelberht, Schmid, p. 2.

⁴ *Germ.* XII.

graded according to the crime, with fines in horses or cattle; a part of these fines is paid to the king or to the community, a part to the injured person or his relatives. Thus we see a state of affairs distinctly analogous to the system of Anglo-Saxon codes. It is an Aryan tendency to distinguish carefully between crime and crime and to shade the punishment in heavier or lighter fashion. Even among the Franks, Salic law interposes to protect woman from insult, and lays fines upon the man who may take liberties with her person: according as he grasps her forearm or upper arm or touches her breast, he pays 1200, 1400, and 1800 *denarii*, and if he knocks off her head-dress, the fine is fifteen *solidi*.¹ Moreover, apart from the fine or "damages," which make restitution to the sufferer, there was something like our modern fine, the *wite* of Anglo-Saxon law, which had to be paid to the state.²

The freeman, the citizen, was the person who made the laws and for whose sake they existed; but there was a class of people outside the protection of law. Such were abandoned criminals in the first instance, and then those people who followed any despised occupation, the professional fighter or champion, wandering minstrels and mountebanks, beggars, tramps; later, illegitimate children; and latest (towards the end of the middle ages), the hangman.³

Allusion has been made already to the shy advances undertaken by law upon the domain of feud and pri-

¹ *Lex. Sal.* c. 75. The late Thomas Wright quotes this and more in his *Womankind in Western Europe*, p. 38.

² The relative amount of respect paid to law by the different Germanic tribes is not easy to fix. For general lawlessness the Franks must claim precedence. See Von Loebell, *Gregor v. Tours*, pp. 35-57.

³ Von Amira in Paul's *Grdr.* II. 2. 123.

vate warfare. Among such advances we must count the duel and trial by battle; these were in all probability carried on before the full assembly of the people. Tacitus tells us of a case where combat between two champions — a captive from one army, a soldier from the other — was thought to foreshadow the event of war, a sort of divination.¹ Oaths, too, must have been taken, along with an appeal to heaven, when the combat was of a judicial nature. In Scandinavia, the accused as well as the accuser grasped the holy ring stained with sacrificial blood, and made oath; while a late survival caused the same persons to swear upon the boar's head.

Another ceremony which was probably carried out before one of these general assemblies was the ordeal.² Jacob Grimm thinks that the ordeal, which concerns itself with past or present, just as the oracle is busied with the future, was of remote heathen origin;³ and Mr. E. B. Tylor approves Jamieson's derivation of our phrase "to haul over the coals" from the time-honored rite of passing through the fire.⁴ The grave injustice of the ordeal, falling heavily upon accused persons, who were dependent on a miracle for the establishment of their innocence, has led Grimm to the conclusion that the early middle ages seldom applied this test in the case of freemen. A freeman took oath of innocence; while the slave and the dependent were driven to the terrors of the ordeal. Precisely so, in later days, it was the witches, mostly

¹ *Germ.* X.

² See Dahn, *Bausteine*, II. 1-75, "Studien zur Geschichte der german. Gottesurtheile."

³ *R. A.* 909.

⁴ *Primitive Culture*, I. 85.

from the poorest classes of the population, who were compelled to undergo the ordeal by water or by fire. In the old heathen times, however, it must have been prescribed for all classes of society. A queen herself submits to it in what has been called "the best and earliest description of a heathen ordeal." It is Gudrun purging herself from the charge of adultery. In sight of the court, — "seven hundred men came into the hall to see the king's wife deal with the cauldron," — she dips her hand to the bottom of the boiling water, and unhurt takes out the stones. Then the accuser is forced to undergo the trial, and is badly scalded.¹ The ordeal was so strongly founded upon popular approval that the church was forced to recognize it along with many another suspicious ceremony.²

Of the different kinds of ordeal, we may note the thrusting of one's hand directly into the fire, walking through the flames, seizing a red-hot iron with naked hand; fetching with bared arm a stone or ring from the bottom of a kettle filled with boiling water; being flung into pond or river, with the condition that floating means guilt and sinking innocence, — an alternative mocked in certain verses of *Hudibras*; and passing before the corpse of a murdered man, with the expectation that the body will begin to bleed at the approach of the murderer, — as in the *Nibelungen*

¹ Vigfusson-Powell, *C. P. B. I.* 322 f., 561.

² A Frisian legend makes the "good" King Karl and the heathen King Redbad enter upon an ordeal to decide ownership of Frisian territory: who can longer remain still shall conquer. Twelve hours long they stand motionless. Then Karl drops his glove; Redbad picks it up, and loses, as Karl exclaims, "Thou art my 'man'!" See Richthofen, *Fries. Rechtsges.* II. 418.

Lay, where Siegfried lies upon the bier, and the kings, and Hagen his murderer, enter the church :—

And all denied the murder ; but Kriemhilt cried in teen, —
 “ Whoso would prove him guiltless may let it now be seen.
 In presence of the people let him approach the bier,
 And stand before the murdered man, and truth shall then be
 clear.”

That is a mickle wonder, whene'er before the dead
 (Ye see it yet full often) the murderer is led,
 Again the wounds gin bleeding : and so it happened here.
 The guilt of Hagen on this wise right plainly did appear.

The wounds they fell a-bleeding, as they had done before. . . .¹

The Anglo-Saxon laws show the ordeal purely as an appeal to God's judgment, and prescribe various religious preparations in addition to the judicial procedure.² The most remarkable of these Old English ordeals was the so-called *corsnæd*, where a piece of bread or cheese — later it was the consecrated bread of the church — was swallowed by the accused, with the idea that a guilty person must choke in the attempt. It was noted whether the swallower trembled and turned pale in his attempt; and a prayer was often put up that if he was guilty, his throat and digestive organs might fail to perform their office.³

The foregoing tests require but one person: the trial by battle brought both parties into action.

¹ *N. L.* 984. See also *R. A.* 930 f. Familiar, too, is the scene in Shakspeare's *Richard III.*, I. 2, where King Henry's corpse bleeds at the approach of his murderer.

² Schmid, *s.v.* *ordâl*, and references, especially pp. 144 and 416 ff. For the Greek use of this ceremony, see the well-known passage of the *Antigone*, 264 ff.

³ “ Fac eum, domine, in visceribus angustari, ejus guttur conclude,” etc.

Grimm records a form of duel where physical endurance decided the cause. In heathen times this was probably a test to see which of two persons could longer sustain the hands and arms aloft. In Christian practice, this was changed to the custom of standing with uplifted hands by a cross, the *judicium crucis*. We have noted above Karl's contest with Redbad, where the test was to stand motionless as long as possible.

CHAPTER XI

THE FUNERAL

The weapon-death — Burning and burial — The former a primitive Germanic habit — The mound or barrow — Its position — What was burnt or buried with the dead — Sacrifice of the living — Ship-burials — The land of souls — Germanic horror of the grave — The elegiac mood in our poetry — Games and feasts at the funeral — Ceremonies at the burial of Attila and of *Béowulf*.

DEATH, we have already seen, came to the German upon the battle-field, in the feud, and at sea; but nowhere so dreaded as where it found him in his bed, — the “straw-death,” as he called it. Men who die thus inglorious are doomed to tread wet and chill and dusky ways to the land of Hel. Old warriors of the Viking age, when caught by illness, gashed themselves with Odin’s spear, and so bought “Valhalla” with their blood.¹ Of the various paths to death, old age had the worst adjectives. A passage in *Béowulf* preserves some of the primitive sentiment, though the note of sermonizing has slipped in and given a modern tone to the whole: —

¹ The earlier belief gave all dead to Hel, and later to Thor. Odin is the Viking god. See Schullerus in *P. B. Beit.* XII. 246, and Petersen, *Om Nordboernes Gudedyrketse og Gudetro i Hedenold*, p. 90 ff. For another notion, which worked against mutilated bodies, see Tylor, *Primitive Culture*, II. 87.

Soon shall it be
 that sword or sickness will steal thy power,
 or fang of the fire, or flood's o'erwhelming,
 gripe of the falchion, or flight of spear,
 or odious age; or the eyes' clear beam
 wax dull and darken.¹

A famous passage of the poetic Edda² mentions the different deaths which men may die. "I counsel thee ninthly," says Sigrdrífa to Sigurd, "that thou give the dead man burial no matter where thou shalt find him, *be he sick-dead, or sea-dead or weapon-dead. . .*" The sea-death came often enough to these northern pirates, and was by no means without honor. But it is the weapon-dead who fare straightway to Odin; unwasted by sickness, in the full strength of manhood, they leap mailed and armed into the new life. This feeling about the compensations of a warrior's death is still abroad, and is not yet a mere sentiment. The Horatian maxim was certainly more than sentiment, — it was Roman faith and Roman pride; and there is even for us something full-blooded about those adjectives *dulce et decorum*. The warrior in Germanic times had the stateliest funeral; his arms, and often his wife and slaves, gave him fitting escort to the other world. A violent death of almost any kind was the only aristocratic way to leave life in Scandinavia. Suicide was honorable when undertaken from motives which men then deemed proper, and is a matter of frequent occurrence in Old Norse annals.

As regards the funeral rites of the German, we are

¹ *Béow.* 1763 ff.

² *Sigrdrífumál*, 33, ed. Hildebrand.

not without fairly copious sources of information.¹ Burial and burning of the corpse alternate in history, and are conditioned by the circumstances of a given tribe. "The soberest nations," says Sir Thomas Browne in his *Hydriotaphia*, "have rested in two ways, of simple inhumation and burning," while he asserts that "carnal interment . . . was of the elder date." It is curious, by the way, to compare the fantastic reasons given by Sir Thomas for these practices, with the poetical explanation of the German scholar and romanticist, Jacob Grimm. "Some being of the opinion of Thales, that water was the original of all things, thought it most equal to submit unto the principle of putrefaction, and conclude in a moist relentment. Others conceived it most natural to end in fire, as due unto the master principle in the composition . . . and therefore heaped up large piles, more actively to waft them toward that element. . . ." Grimm, too, regards burial as the primitive custom, and gives it a poetic motive, — the body sinks to the mother of all things, earth; whereas by fire the soul soars in flame to the father, to Jupiter.² Burning, he therefore concludes, shows a higher stage of culture; and he connects with this custom the formation of a belief in the end of the world through fire. On the other hand, burial would often be a necessity, — after a battle, or in a country destitute of wood. Where the two customs existed side by side, burning was for

¹ The best summary is J. Grimm, *über das Verbrennen der Leichen*, an admirable paper, read before the Berlin Academy in 1849. *Kl. Schr.* II. 211 ff.

² Work quoted, p. 214 f. One involuntarily recalls Goethe's sympathetic ballad, *Der Gott und die Bajadere*, with its fine ending; and Grimm quotes the conclusion of the same poet's *Braut von Corinth*.

the rich and burial for the poor. A nomadic folk tends to burn, an agricultural folk to bury. The stone age probably buried,¹ thinks Grimm, the bronze age burnt, while the age of iron returned to burial. In broader generalization, the heathen races have mostly preferred to burn their dead, while Christians incline to burial. The importance of some sort of funeral rites was conceded by primitive man; only the roughest tribes have left the bodies of their dead to dogs and birds of prey, — a fearful fate reserved for conquered warriors, and familiar in the *Iliad* and in our Anglo-Saxon poetry. The old Persians, however, treated their dead in this way, and some Mongolians still keep up the practice; but for these latter there are explanations in the theories of soul-cult, advanced by modern anthropology. One thing is quite certain: our Germanic ancestors burned their dead.²

To Tacitus, the Germanic funeral ceremonies seemed simple in the extreme. But there was probably more meant and more carried out than met his ear; and we must remember the extraordinary pomp and circumstance of funerals at Rome. Cæsar testifies³ that Gallic funerals were very sumptuous; but the only peculiar custom which Tacitus finds worthy of notice in Germanic rites is the use of certain kinds of wood for the funeral-pile of illustrious men. No costly coverings, he says, are used, no spices; but the

¹ Certainly did, says Montelius, *Civilization of Sweden in Ancient Times*, trans. Woods, p. 35.

² Swedish graves of the early iron age show both burnt and unburnt bodies. In the boat-burials bodies were now burnt, now unburnt. Montelius, pp. 122-139.

³ *B. G.* VI. 19, "funera . . . magna et sumptuosa."

arms, and often the horse, of the warrior are given with him to the flames. The grave is then marked by a mound of turf.¹ While the funeral was less splendid than those sung in some of our early epics, — as in *Béowulf*, — there is no doubt that it was of the highest importance; for in another place,² Tacitus tells us that even amid the most desperate battles Germans were wont to carry away (to the rear) the bodies of their dead. That the Germans burnt their dead was natural enough for people shut in among such cremating races as the Gauls, Romans, Greeks, Thracians, Lithuanians, and Slavonic tribes.³ Christianity cleaves to burial, not only because Christ's stay in the sepulchre hallowed it, but from Old Testament precedents. In the third century burning of the dead had ceased in Rome, and in the fourth century it was there spoken of as a matter of antiquity. Charlemagne, in an edict for the Saxons, made burning of corpses a capital offence, and Boniface worked against it, as against the eating of horse-flesh, — pagan practices both.⁴ Certain names of places in England preserve traces of the old custom; such are *Adeshâm*, in Kent, — now Adisham, — where *Ad* certainly means funeral pile; and *Bælesbeorh* in Gloucestershire.⁵ Kemble quotes the Orvar Oddr Saga, where the hero gives direction for his funeral. Men are to make a stone trough and take it to the wood: "There,

⁴ "Jubemus," says Charlemagne, "ut corpora Christianorum Saxonorum ad cimeteria ecclesiæ deferantur, et non ad tumulos Paganorum."

⁵ Given by Kemble in his *Horæ Ferales*, p. 119 f. in an essay on "Burial and Cremation."

when I am dead, I am to lie in fire and burn up entirely." Oddr, we must remember, was a convert to Christianity. For a long time converts used a certain amount of fire in funeral rites, as if insuring themselves the advantages of both systems. Moreover, when the custom of burial had superseded the heathen funeral pile, choice and nature of the grave-mound remained for a long time under control of private persons. Not, thinks Kemble,¹ till the clergy saw decided power and profit involved in the superintendence of funeral ceremonies — say about the end of the ninth century — were regular churchyards established in England. The Anglo-Saxon loved to be buried in a chosen place — by a stream, or on some headland that looked out far over the ocean.² Grimm, in another interesting paper,³ notes the antiquity of such choice of burial-sites. In days when corpses were burned, the ashes were committed to a huge mound or barrow, sometimes by the great military highway, or by the ford of the river, if inland, or else on the shore of the sea. Greek, Roman, and Saxon examples show a common trait. In the *Odyssey*, we have a description of the burial of Achilles.⁴ "So thou wert burned in the garments of the gods, and in much unguents and in sweet honey, and many heroes of the Achæans moved mail-clad around the pyre where thou wast burning, both foot-men and horse, and great was the noise that arose. But when the flame of Hephæstus had utterly abolished thee, lo, in the morning we

¹ Work quoted, p. 109.

⁴ Bk. 24; the translation is that of Butcher and Lang.

gathered together thy white bones, Achilles, and bestowed them in unmixed wine and in unguents. Thy mother gave a twy-handled golden urn. . . . Therein lie thy white bones. . . . Then over them did we pile a great and goodly tomb, . . . *high on a jutting headland over wide Hellespont*, that it might be far seen from off the sea by men that now are and by those that shall be hereafter." In the same way Elpenor asks Odysseus to burn him with his armor, and "pile him a barrow on the shore of the gray sea . . . that even men unborn may hear his story"; and Æneas buries the ashes of his friend Misenus in a huge mound¹ on a headland of the sea. Such burial-sites are often mentioned in the Norwegian, Swedish, and Icelandic sagas. Grimm finds "hohe Poesie" in the account of Yngwar's burial-place. "The Baltic sings a joyous wave-song to lull the Swedish hero; the sleeper in the hill hears the billows breaking near him, and their murmur cheers his loneliness." Burial in such conspicuous places is easily proved for Anglo-Saxon times. Taking first the antiquary's evidence, we may note the "fine Saxon barrow," "on a bold conical hill overlooking Folkestone in Kent."² Further, "the hill of Osengal, overlooking Pegwell Bay near Ramsgate, and furnishing a magnificent view of the Channel, . . . is perforated like a honey-comb with the graves of an immense Saxon cemetery."³ Finally, we have the testimony of our old epos. Says the dying Béowulf to his young kinsman Wiglaf:⁴ —

¹ "Ingenti mole." See *Odyssey*, XI. 56 ff., Verg. *Æn.* VI. 232, and Grimm, work quoted.

³ *Ibid.* 470.

⁴ 2802 ff.

Bid the battle-famed build me a mound,
 bright after bale ¹ on a brow of the coast ;
 this as a token to tribes of mine
 on Whale-Headland high shall tower,
 by ocean-wanderers ever called
 Béowulf's Barrow, when back from far
 they drive their keels o'er the dusky sea.

Kemble remarks² that the inland tumuli or barrows are often used in old charters as the boundaries of Anglo-Saxon estates. These ancient documents either couple with the mention of the mound the adjective "heathen," or else give a name of the person who lies in the tomb, and probably, as Kemble argues, was a Christian. Ordinarily, we have either simply "the heathen barrow," or else "Hoce's barrow"; but in a charter of the year 976, we read: "Thence to the heathen 'burial' (tomb); thence westward to the boundary where Ælfstán lies in heathen barrow." This, Kemble takes to signify the burial of a Christian in the midst of old heathen graves. Poetry easily laid hold of these places, and gave them that needful touch of the mystic and uncanny. In a remarkable passage of *Salomon and Saturn*,³ there is something of the later romantic shudder, as well as a good movement of the verse:—

His sword well-burnisht shineth yet,
*and over the barrow beam the hilts.*⁴

The study of primitive culture leads us to the conclusion that burials, whether of the body or of

¹ *I.e.* after the funeral pile is burnt.

² Work quoted, p. 110.

³ Kemble's ed. p. 156. See p. 248, above.

⁴ Of course souls often appear over their graves in the shape of flame. So Angantyr and his brothers in the *Hervararsaga*. See Mogk, in Paul's *Grdr.* I. 1012.

the ashes left from the funeral-pile, began in or near the home itself. Survivals and traditions point this way, even if we neglect the study of savage customs. Thus Alboin was buried in Italy under the steps of a palace, and with him were his arms and ornaments.¹ Primitive races have buried their dead under the threshold, with a general feeling that the spirit will protect its former home. Here, however, we note a curious conflict between two ideas,—the desire to keep a spirit near one's home and so enjoy the benefits of its protection, and the fear of evil influences proceeding from such hovering souls. A half-way dualism prompts us to call for aid upon the shades of our fathers, and yet at other times to conjure into peace the perturbed spirit, and bid it cease to haunt us. Men placed for these spirits the little offering of meat or wine; and even yet a prevalent superstition forbids the carrying out of a corpse through door or window: there must be a hole cut for it through the wall, or it must at least take some unwonted way of egress.² It was once common with German peasants to bury the dead man in the house where he had lived;³ it is still custom in many places to open doors and windows of the sick-room where one has just died,—let the soul fly off and rid the survivors of an unwelcome presence. The tomb reared over a grave is itself originally nothing more nor less than a house, and the home of the dead was like the home of the

¹ Paul. Diac. II. 28.

² Weinhold's (*Altnord. Leben*, p. 476) facts are true, but his theory is false. Not because the corpse is "unclean" is this exit chosen; it is to keep the spirit from finding its way back.

³ Henning, *das deutsche Haus* (Quellen und Forschungen, No. 47), p. 37.

living. The Egyptians carried this idea to its most elaborate conclusion. So arose the temple, say some, in Greece; it was the house built over the grave of a hero. Lippert even asserts that the whole doctrine of an under-world originated with graves, the subterranean homes of the dead.¹ Trees were planted about such a grave, and the sacred grove grew up about the resting-place of powerful ancestors, or of the deified founder of the race itself. Such groves are mentioned in Bugge's text of the *Harbardslið*:² "When didst thou learn these things?" asks Thor; and Harbard (= Odin) answers: "From the old folk I took them, the people who live in the woods." Graves were sometimes used as treasure houses which the ancestral spirit could guard; or else they served as a meeting-place,³ and the folk met there for councils, courts, and the like. Kemble⁴ says that Cwichelmes Hlæw, one of the most commanding barrows in England, was in the eleventh century *seat of the shire-court*. Tradition, moreover, told of former pagan rites at Enta Hlæw and Scuccan Hlæw, the Giants' Barrow and the Devil's Barrow. There were no regular council-halls for Germanic chieftains until the time of Charlemagne; but a bit of enclosed land, the shade of a tree, an ancient sepulchre, were favorite places. In the same way, this notion of the grave acted upon its own inner arrangement; for a tomb was found in Bavaria with five skeletons "seated

¹ *Religion der europäischen Culturstämme*, p. 10.

² Hildebrand has *haugum* instead of *skógum*, and thus reads: "the people who live in the mounds or graves of home."

³ Weinhold, *Altnord. Leben*, p. 499.

⁴ *Horæ Ferales*, p. 116. We noted the love of Germans for *high or conspicuous sites* for their courts and councils.

about a vessel, by the side of which lay two long iron knives.”¹

There can be no doubt that the heathen Anglo-Saxons first burnt, and then buried, their dead. Grimm collects the evidence of our old poetry, and the results of antiquarian research only confirm us in our belief. That the thanes of *Béowulf* are ordered to bring from far the “balewood,” supports the statement of Tacitus, that distinguished men were burnt on a funeral-pile made of certain kinds of wood. Moreover, we have an epic formula in Anglo-Saxon used as a variant or “kenning,” for the simple notion of dying. Instead of “dies” a man “chooses the funeral-pile,” — seeks it, goes to it.² Two such burnings are described in *Béowulf*, — that of the hero, and that of Hnæf the Dane.

We learn from these descriptions how familiar and necessary seemed to the Anglo-Saxons the burning of their dead. We see how the funeral-pile was hung with weapons and shields; and how when the mound had been raised, it was surrounded with a wall, and furnished like a mortal’s own house, with rings and treasure and whatsoever gladdens the heart of men as they sit secure in their hall. Ornaments, weapons, horse, slave, spouse, — all these were needed by the warrior in his life, and a simple logic concluded his need of them in what was literally the other world. All this is strange to modern notions, or at best exists in shadowy survival. Till late in the middle ages a knight’s best steed was killed when its owner died; nowadays, we lead the favorite war-horse in the fune-

¹ Lippert, *Rel. d. eur. Cult.* p. 148.

² Cf. *Béow.* 2818, “*æf he bæf cure.*”

ral procession. In some places of Germany, only a few years ago, the custom prevailed of putting comb, razor, and soap, into a man's coffin.¹ Suggestive is the lingering habit of giving the dead man a pair of stout shoes; for the way that led to the land of spirits might well be rough. In Scandinavia, it was the custom for a near relative to fasten these shoes firmly to the feet of the corpse.² Often a staff was added; and in the great majority of cases food and drink were provided, ghostly *viaticum*, found in countless graves. Corn, fruit, and the like are favorites; and Kemble³ mentions the Saxon fondness for hazelnuts. In modern Sweden, they give the dead man his tobacco-pipe, pen-knife, and a flask of brandy;⁴ while even in ancient Sweden it was considered proper to give him draughts and dice to beguile the weariness of his journey.⁵ But kings, and men of might must not be left to walk; and the horse plays a great part in legends which have to do with graves. Such is the Danish *Helhest*. Says Thiele:⁶ "In the old times, they used to bury in every churchyard, before any human body was interred, a *living horse*." This horse, which, of course, haunts the place as a terror to evil-doers, is often headless, or three-legged, or what not; now it is white, now black. In Germany the *Schimmel* or white horse plays a similar rôle; and he is

¹ Kuhn and Schwartz, *Nordd. Sagen*, p. 435. Visitors to the famous Museum of Northern Antiquities in Copenhagen remember the pathetic sight of that body from the moor, so well preserved, and the little wooden comb withal. But it is a fine head of hair, and deserves the vanity.

⁶ *Danmarks Folkesagn*, II. 293.

known even in far Arabia. In another tale,¹ Thiele mentions the belief that great store of treasure can be raised from a grave where a "gold-horse," or "*a gold-prince on horseback*," lies buried. Some workmen once saw a grave open — it was known to contain a mass of treasure — "and a large man on horseback, with glittering buttons in his coat, rode out of the portal of the mound." The prosaic theory of Lippert, that most of the dragon stories are due to the old habit of burying treasure with the dead, and to the natural desire to frighten off plunderers, is, to be sure, wholly inadequate as a solution of the dragon-and-treasure problem, but has none the less its probable features. The legends of buried treasure, of ghosts who must "walk," because they have uphoarded in their life "extorted treasure in the womb of earth," have surely some relation to these old burials. It seems fair to suppose that the angry spirit-tenant of the mound might well have his share, though not the sole proprietorship, in the manufacture of dragon-myths. There is no doubt that graves were often rifled; we can see how the Viking ship at Christiania has been broken and plundered. Often, too, the grave was opened by a member of the family, or even by the state, and a loan or contribution was forced from the dead capitalist. Kemble, in the interesting work above quoted, speaking of the barrows often named as boundary-marks in the old charters, points out an interesting phrase: "*tó pam brocenan beorge*," *to the broken barrow*. Another is, "westward of the barrow that has been dug into." Horse and treasure do not exhaust the possibilities,

¹ I. 348.

and sometimes a chariot was added, that the spirit might make his way to Valhalla in still greater state. Grimm¹ instances the burial of King Harald, after the great battle of Bravalla.² Conquered and slain in battle, he was sumptuously buried by the victorious King Hring. Harald's body was washed, clad in armor, laid upon the chariot of King Hring, and so driven into the mound. The horse was killed, and the conqueror laid beside it his own saddle, and cried to the dead king: "Now thou canst ride to Valhalla, or drive there, as thou wilt!" Before the mound was closed, all the warriors threw in rings and costly weapons. Another account of the same occurrence says that the body was first burned, and this would be the oldest version; but even when the burning of the corpse was forgotten, men clung to the accessories of horse and chariot. Besides horses, we often hear of the burning or slaying of dogs and falcons. *Le roi s'amuse.*

Above all other possessions which must go with the dead warrior, stood his weapons, and of his weapons, the sword. We see nothing out of the way when a general or a military monarch is buried with sword at his side. Thus armed, the French soldier in Heine's well-known poem was fain to lie in his grave and wait till his emperor came back again. The legends and sagas show us how stubbornly the dead hand of a German warrior was clasped about his sword. Thiele³ gives the Danish legend of King Hiarne who was buried on an island with his thirty thanes about him. By accident his sword was dug up, and a man named Niels Østergaard carried it

¹ Work quoted, p. 271. ² About 790 A.D. ³ Work quoted, I. 13.

home. But from that time Niels had no luck, and all went wrong in his house. At last he carried back the sword, and buried it; and since then no one has disturbed King Hiarne's tomb. Still more demonstration was made by the robbed sword of the great Holger Danske, which took twelve horses to drag it away, and in the house where it was laid caused such terrible commotion and shaking of walls, that people were fain to haul back the sword to its place; and this time it needed only two horses.¹ There are many similar legends. It is needless to dwell on the survivals of this custom of giving precious possessions along with the dead. Instead of burying or burning treasure, the Chinese burn paper which represents it. Among the Western nations we have the penny put in the mouth of a dead man. Modern instances would not be far to seek, though entirely confined to ornament.

The darker side of this picture is familiar enough. Not only tool or ornament or weapon, — the living went down with the dead. This sharing of a husband's or a master's death might be voluntary or involuntary. Often the wife esteemed it her privilege as well as her duty to die upon the funeral-pile of her lord; and in the famous legend which impressed so strongly the imagination of our Germanic race and gave it its one great epos, when Brynhild's jealousy has slain Sigurd, her love for him prompts her to share his grave. The story of her fate is told in the verse of the *Sigurðarkviða*,² and in the prose of the *Volsung* saga.³ The

¹ Thiele, I. 20.

² *Edda*, ed. Hildebrand, p. 234 f.

³ Chap. 31. A translation of the poetical version, with attempted restoration of the missing words, will be found in Vigfusson and Powell's *Corpus*, I. 302 f.

latter is given here because free from the gaps of the older version: "Now I beg thee, Gunnar, one thing, and it is the last I shall beg of thee," — it is Brynhild who addresses her husband. "Make a great funeral-pyre for all of us upon the mound, for me and Sigurd and all that are slain along with him. Cover it with human blood, and burn me there by the side of the Hunnish king; and on his other side my men, — two at his head, two at his feet, and two hawks. . . . The doors¹ shall not fall upon his heels where I follow him; and our retinue is no sorry one when five handmaidens and eight serving-men, whom my father gave me, follow him, and they too are burnt who are slain along with Sigurd. . . . Now was Sigurd's corse cared for in the ancient fashion, and a huge funeral-pile was built. And when that towered so high that it could be seen from far, they laid upon it the bodies of Sigurd and his three-year-old son, whom Brynhild had caused to be slain, and also the corpse of Gothorm, who had murdered Sigurd. And when the flames were hot, went forth Brynhild. She said to her handmaidens they might take her gold, and she died, and she was burnt there along with Sigurd, and so her life was done." Less passionate, but full of quiet devotion, are the words of the wife of old Nial: "Young I was married to Nial, and I have promised him that one fate should take us both." She refuses to leave the burning house, and dies with her husband. Wherever we turn in ancient history, examples of this custom press upon us. The modern school of criticism is not inclined to lean on poetry or sentiment in its explanations of these

¹ Of Hel's domain.

sombre rites ; and even a philologist like Hehn finds Grimm's treatment far too romantic.¹ Through these rifts in the fabric of our old culture we catch glimpses of the sheer brutality and indifference to human life which marked the earliest stages of primitive religious systems. Hehn collects a mass of examples. We remember that Achilles offered to the shade of Patroclus not only horses and dogs, but twelve young Trojans whom he had captured for the purpose ; and on his own grave, in after days, Polyxena was burned. In some countries the wife was expected to hang herself at the grave of her husband. Most cruel, perhaps, was the Scythian custom.² When the king dies, one of his wives is strangled and buried with him, likewise a number of servants and horses. On the anniversary of his death, fifty slaves, whom he had chosen for the purpose, and fifty choice horses are treated in the same manner. The burial of Alaric the Goth is familiar to readers of Gibbon. Boniface, in a letter to the king of Mercia, about 745 A.D., describes the custom among the Wends : the wife is buried with her husband. As regards the sacrificial side of this custom, we shall have more to say in the consideration of Germanic religion.

Whatever is sanctioned by religion and dateless custom comes to be regarded as a virtue, and finds willing devotees. Possibly some of the more important ceremonies and duties of modern life will one day be counted in the list of painful superstitions ; but, however that may be, the voluntary death of a wife at her husband's funeral was reckoned among the conspicuous virtues of the Germanic woman. Hakon

¹ Hehn, work quoted, p. 440.

² Hehn ; and Herodotus, 4. 71 f.

Jarl was refused in his old age by Gunnhild because she would in all probability have early occasion to die with him. Nor was the tie of husband and wife the only one which called for such a sacrifice. Sons, as in the case of Sigurd, or brothers, were chosen as the victims; and the bonds of friendship and love were often hallowed by a sense of similar obligation. Cases can be found where two men agree that should either die, the other will straightway follow. True lovers, in countless tales and ballads of a later time, die at the selfsame moment; instead of the old mingling ashes, they are buried side by side, and two rose trees spring through the turf and twine lovingly together.

On the general subject of burial, there is little to say. To cover the corpse, even of one's bitterest foe, was a custom in Iceland whose breach might lead to banishment.¹ No pious Scandinavian passed a corpse without tossing a bit of turf or a stone upon it by way of covering; and since this corresponds so closely to the well-known classical traditions, it seems reasonable to infer for the whole Germanic race a general sense of the immense importance of funeral-rites. We have no reason to suppose that women and children were refused the ceremonies which are told of kings and warriors and peasants. Cases of the funeral-rites of women are on record; and skeletons of children have been found in circumstances that abundantly justify the conclusion.²

Full of a weird interest are the ship-burials of our sea-loving ancestors. Let us first hear how the white god Balder was burnt Viking-wise upon his ship.

¹ Weinhold, *Altnord. Leben*, p. 474.

² *Ibid.* p. 482.

“Then the Æsir took Balder’s corpse and bore it to the sea. The name of Balder’s ship was *Hringhorni*; it was the greatest of all ships. The gods were fain to push it from shore and make thereon Balder’s balefire, but the ship would not move. Then they sent to Jotunheim after the giantess who is called Hyrrokin; when she came, she rode a wolf and had a snake for its bridle; when she leaped from the steed, Odin called up four Berserkers and bade them hold it, but they could do this only by felling it to the ground. Then Hyrrokin stept to the bow of the boat, and with her first thrust she pushed it so that fire flashed from the rollers and all lands trembled. That made Thor angry, and he grasped his hammer and would have shattered her head, had not all the gods asked peace for her. Then Balder’s corpse was borne out to the ship, and when his wife, Nanna, daughter of Nep, saw that, she burst for grief and died. Then she was carried to the funeral-pile, and it was kindled. Thor came up and consecrated it with his hammer, and before his feet ran a dwarf called Litr, and Thor lifted his foot and thrust the dwarf into the fire, where he was burned. . . . Odin laid upon the pile a ring. . . . Balder’s horse and all the trappings were likewise laid upon the pile. . . .”¹ Relics of such naval sepulchres have been discovered; such is the famous Viking ship, now in the possession of the university of Christiania, and recently dug up from its resting-place of a thousand years.

Famous is the so-called “Passing of Scyld”;² we find, however, no mention of burning the corpse, and

¹ *Glyfaginning*, XLIX., Prose Edda, ed. Wilken, p. 75 f. ² *Béow.* 26 ff.

a too hasty inference of Sarrazin¹ makes this fact prove that an Anglo-Saxon editor or translator of the Scandinavian original (such is Sarrazin's nigh impossible theory) allowed his own ideas of burial to predominate in the description.

Forth he fared at the fateful moment,
 Scyld the Grim into God's protection.
 Then they bore him over to ocean's billow,
 clansmen trusty — he charg'd them thus
 while he wielded words, winsome Scylding.²
 In the roadstead rock'd the ring-prow'd vessel, —
 the lovéd leader had long possess'd it, —³
 ready and gleaming, a royal ship :
 there laid they down their darling lord,
 in the boat's wide bosom the breaker of rings,
 by the mast the mighty one. Many a treasure
 fetch'd from far was freighted with him.
 Ne'er have I known ship nobler deck'd
 with weapons of war and weeds of battle,
 with blade and breastplate. On its bosom lay
 heap'd-up hoard that hence should go
 far o'er the flood with him floating away.
 No less they gave him lordly gifts,
 ample treasure, than erstwhile those
 who in former time forth had sent him
 sole o'er the sea, a suckling child.
 High o'er his head they hoist the standard,
 a golden banner ; let billows take him,
 gave him to ocean : grave was their spirit,
 mournful their mood. For men are powerless
 to say in sooth, sons of the hall,
 heroes under heaven, who harbor'd that freight !

This charming myth is found in many places, the story of infants who come mysteriously floating to

¹ *Béowulf-Studien*, p. 39.

² "Friend of the Scyldings."

³ With Bugge *P. B. Beit.* 12, 80, reading 31 in parenthesis after 32.

the shore in a boat with gorgeous trappings, evidently a gift of heaven to the kingless realm. There they rule wisely and well, win lands, fame, vassals, and at last, dying, order their funeral in the same boat that bore them to their adopted country. Of kindred spirit are the Celtic myths about King Arthur, and those Germanic legends which have found their most popular type in the story of Lohengrin.¹ Romance is less obvious in the custom of South-Sea Islanders, who put their dead into old disabled boats, and so send them off to sea; and not only the dead, but those also who are mortally sick.² In the *Njalssaga*,³ old Flosi is weary of life, takes a bad boat, and sails on his last voyage: "Folk said his boat was wretched, but Flosi said it was good enough for one who was old and 'fey.' He took in cargo, and put to sea; but nothing has ever been heard of the ship since then." In the old English ballad of *Edward* we have such an allusion: ⁴ —

"What death dost thou desire to die,
Son Davie, son Davie?"

"I'll set my foot in a bottomless ship,
Mother lady, mother lady;
I'll set my foot in a bottomless ship,
And ye'll never see mair o' me."

Ship-burial seems in most places to have been a prerogative of kings and princes and heroes of great fame. Saxo tells us that King Frotho⁵ made the law

¹ References, *D. M.* 693. ² Lippert, *Seelencult*, pp. 6, 13. ³ C. 160.

that a chief (*satrapa*) shall be burned with one ship; but for ordinary persons, ten shall be burned with each ship. Such a vessel — *an ætheling's barge*, the poet of *Béowulf* calls it — filled with treasure and wrapt in flames, drifting slowly out to sea, watched by a great throng upon the shore, must have made a royal funeral indeed. This custom of ship-burial continued in the case of kings and heroes after it had become usual for the masses to be buried in mounds or common graves. A curious combination, or else survival, was the custom best known in Scandinavia, of burying people first in actual ships, then in coffins made to represent a ship, and lastly in an ordinary grave with stones piled about it in the shape of a ship.¹ “Doubtless,” says Grimm, “men were buried in a boat so that when in the under-world they came to bodies of water they might have their boat at hand.” For just as burial in the earth brought about belief in that shadowy land, the “under-world,” so perhaps these old boat-burials made men think of a spirit-world oversea. As with the Greek, Germanic superstition made this an island; and even Hel's mansion is surrounded by water. The classical Charon is not without his relatives in our own Germanic legend. To a fisherman at Speier on the Rhine came one night a person dressed like a monk and asked to be ferried over the stream; this done, the fisherman returned and found five others waiting for him.² The legend is incomplete; but its origin and tendency are evident enough. Many old skeletons have been found in Germany with a *coin* of

¹ Grimm, work quoted, p. 274; *D. M.* 692.

² Grimm, *Deutsche Sagen*, No. 276; *cf.* also *D. M.* 694.

some sort still remaining in the mouth.¹ Moreover, just as the mysterious western ocean held for Greek superstition those Fortunate Islands, the mystic Atlantis, the Gardens of the Hesperides, the abode of the blessed dead,—so there lay for Germanic belief a world of souls in the waters toward the setting sun. Procopius² relates a legend of the island “Brittia,” whither the souls of the dead were ferried from the mainland; on the shores of the latter dwelt fishermen and others who were free of all taxes and similar burdens of state, on condition that they held themselves ready to row the dead across. “Before midnight they hear a knocking at their doors, and then the voice of an invisible person who calls them to their work. Immediately they get up, and, following a certain undefined impulse, go to the shore. There they find boats ready for the journey, but quite empty,—not their own boats, moreover, but foreign vessels. They go into these boats and take the oars, whereupon they notice that such a crowd of passengers is on board that the craft sinks to the level of the deck, but no one is to be seen. In an hour they reach Britain, whereas with their own boats they can scarcely row the same distance in a night and a day. Then the boats are emptied, and they row back: the vessels are so light that only the keel is on the water.” Meanwhile no one whatever has been seen, although a voice is heard calling out the name of each person who arrives; women are not named directly, but are called by the name of those to whom they have belonged in life. Kemble queries whether this silent land may not be the place

¹ Grimm, *D. M.*⁴ III. 248.

² *De bello Goth.* IV. 20.

about which is asked a question in the *Salomon and Saturn* : —

Tell me of the land
where none of the folk with foot can walk.¹

Brittia, of course, is England, whither our earliest ancestors, destitute of sails, could scarcely come save by accident or great stress of need. Hence the mystery and the myths. Mannhardt tells of the widespread belief that souls of children are fetched from “Engelland”; the name was applied to Britain, but taken to mean “the place where angels live.” Wackernagel quotes an old story which calls Britain “Seelenland,” soul-land.² We have another description of this ghostly ferry given by Claudian, who wrote early in the fifth century. On the Gallic shore, he says, the same place where Odysseus poured his libation and spoke with the shades, “there may be heard weeping and lamentation and the low rustle of flying souls; and folk who dwell there see pallid phantoms, and watch the shapes of dead men pass by. . . .”

Est locus, extremum qua pandit Gallia littus,
oceanī prætentus aquis, ubi fertur Ulixes
sanguine libato populū movisse silentem.
illic umbrarū tenui stridore volantū
flebilis auditur questus. Simulacra coloni
pallida, defunctasque vident migrare figuras.³

But these infinite projections of the old boat-burial concern rather the realm of myth and of religious

² See Mannhardt, *Germ. Mythen*, p. 326 f., 370, 405. Procopius seems to mean that the souls are taken to an island near “Brittia,” — Ireland, says Wackernagel. See *Haupt's Ztst.* VII. 191.

³ Claudian *in Rufinum*, I. 123 ff.

belief. Actual burial was for the great majority of our race connected with inland places, and where water played a part it was the water of sacred wells and streams. Legends tell of streams or fountains that spring from old heathen tombs, and there are magical properties in the water. Thus the Danish tradition of a certain mound "in which, in old times, men say there was a heathen burial-place. Near the foot of it wells out a spring, about which there is a prophecy of the sibyl, that it shall one day save (the neighboring town) from great danger."¹ Churchyards inherited all this wealth of heathen shudders and superstition; and the folk-lore of every nation is filled with these tales. Our Saxon temperament seems especially inclined to a certain solemn enjoyment of funereal matters. How much has not the subject contributed to make Gray's *Elegy in a Country Churchyard* the most widely read English poem! The *Poema Morale*, a middle-English didactic piece in the septenarius or ballad metre, was enormously popular: it is full of the sepulchre. Even our most imaginative poetry takes a strange energy from the contemplation of death; let Beaumont's fine verses "On the Tombs in Westminster Abbey" bear witness:—

Here be sands, ignoble things,
Dropt from the ruin'd sides of kings.

Add the emphatic testimony of Jacob Grimm:² "No race, to my knowledge, was ever more strongly impressed by the horror of the dark and narrow grave

¹ Thiele, *Danmarks Folkesagn*, II. 35.

² *Verbrennen d. Leichen*, Kl. Schr. II. 308.

than were the old Saxons and Frisians when they turned from burning to burying." Müllenhoff¹ says that "the Frisian legends, especially those of the islands, show a certain melancholy"; and all of their witch stories and superstitions were more terrible and demonic than those of the mainland. Longfellow rendered into English some Anglo-Saxon verses which he called *The Grave*; and made special mention² of the "Debate between the Soul and the Body," of which he translated a few lines.³ Persons familiar with our old poetry — such as that fine fragment called *The Ruin*, or *The Wanderer*, — will recall a dozen elegiac passages all more or less based on the contemplation of death and decay. The somewhat obscure passage in *Béowulf*, which seems to describe a sort of self-burial, is in point.⁴ An old man, the last of his race, fashions or finds a burial-place in a cave among the rocks, and carries into it all the treasure which once delighted his kinsmen. Then he chants his farewell to the splendors of life: —

Now hold thou, earth, since heroes may not,
 warriors' riches! once from thee
 earls have delved them: now death hath seized,
 bale and terror, my trusty people,
 laid down life have my liegemen all.
 None have I left to lift my sword,
 or to cleanse the cup of carven gold,
 costly beaker: clansmen are vanished.

¹ Introduction to *Sagen . . . von Schleswig-Holstein*, etc. p. liii.

² In his *Poets and Poetry of Europe*.

³ Wülker, *Grundriss d. ags. Lit.* p. 74.

⁴ See Bugge in *P. B. Beit.* 12. 370. *Béow.* 2233 ff.

Helmet glittering, golden-fretted,
must part with its trappings: polishers sleep
who were wont to brighten the battle-mask.
And the battle-raiment which bode in war
over bicker of shields the bite of weapons,
since the clan's death, crumbles: nor corselet's ring
shall fare afar with the faméd hero,
at the side of the warrior: winsome harp,
glee-wood is dumb, nor darts good hawk
swift through the hall, nor the speedy horse
stamps in the burg-steads: bitter death
the flower of the race hath reft away.

So the last of his clan. This elegiac mood has been attributed by a German critic,¹ not to the tendency of the race itself, but rather to the softening influences of Christianity. This seems to be a surface-criticism; melancholy of some sort is inherent in the Germanic temperament, and a sheer ferocity of the Viking or even Berserker type is not enough to offset the countless examples of the elegiac and pathetic in our oldest literature. Thus the "dying with a laugh" of Scandinavian heroes is not necessarily opposed to a melancholy habit of mind. There are laughs and laughs.

The funeral-ceremony was accompanied by games, feasting, and sacrifices; and these might well be continued for some time. The act of taking formal possession of one's patrimony was probably connected with these rites; and Sir Henry Maine² speaks of that "close relation between succession to property after death and the performance of some sort of sacrificial rites in honor of the deceased." At the Scandina-

¹ Heinzel, *über den Stil. d. altgerm. Poesie*, Strasburg, 1875.

² *Early Law and Custom*, p. 78. Cf. also his *Ancient Law*, p. 191.

vian funeral-feast, the heir sat on a bench near the high-seat¹ until the Bragi-beaker was brought to him. Then he rose, drank, made certain vows, and thereupon took his father's seat, by this act entering on his inheritance and becoming head of his family. Games at the funeral are of very ancient record; their fundamental purpose was a common amusement for the spirit of the dead man and his living kinsmen, since he was thought to eat, drink, and make merry with the survivors. Feats of horsemanship are favorite forms of this merry-making. A sailor, Wulfstan, told King Alfred of some odd customs which the Esthonians of his time observed at funerals. They feast a long time in the dead man's home, burn his body finally, and then carry all his property from the house and arrange it in several heaps along a considerable distance, the largest heap being farthest from the house. Then all the men ride as swiftly as possible towards the different heaps; the fastest rider naturally gets the largest amount. This must have added terrors to death for all the kinsfolk, and certainly rendered superfluous any ceremonies of entering on the inheritance.² We hear of games at the grave of Attila, and Jordanes describes them briefly.³ In the midst of the plain and under silken tents they placed Attila's body, and celebrated certain remarkable games (*spectaculum*). The best horsemen chosen from the entire race of the Huns rode, after the fashion of the circus, about the place where he lay in

¹ Cf. above, p. 106.

² Voyages of Ohthere and Wulfstan, inserted in Alfred's *Orosius*.

³ "Pauca de multis dicere." See Jord. *de orig. act. Getarum*, ed. Holder, c. 49.

state, and glorified his deeds in a funeral-song, somewhat like the following: "Attila, mighty king of Huns, son of Mundzuccas, lord of the bravest races, who hath ruled alone with power unheard before the realms of Scythia and Germany, and with taking of states and cities hath terrified both the empires! Then lest everything should fall a prey to the enemy, was he moved by prayer to accept a yearly tribute. When finally he had happily done all these things, it was not the wound of a foe, not the treachery of a kinsman, but joyful in the joy of his people, and without a pang, that he fell in death. Who, then, could call that a decease,¹ which no one thinks of avenging?"

Compare with this the account of *Béowulf's* funeral: —²

Then the bairn of Wihstan bade command,
 the man of battles, many a warrior,
 many a hero, hither to bring
 from far the pyre-wood, people-shielders.
 Now fire of the pile shall fret and swallow
 — as wan flame waxes — the warrior's king,
 who often breasted the iron-shower,
 when storm of darts from the string impelled,
 shot o'er the shield-wall; — shaft was firm,
 feather-fretted flew with the barb.

* * * * *

Then the wunden gold on wain was laden
 — 'twere ill to count it! — and th' ætheling borne,
 hoary hero to Hronës-Ness.³
 Folk of the Jutes then fashion'd there
 on the earth a pyre imperishable
 hung with harness and helms of battle,
 with breastplates bright, as he begged them once.

¹ *Exitum*.

² 3110 ff.

³ *Hron* = whale.

In the midst they laid their mighty chieftain,
 warriors wailing their winsome lord.
 Then on the mountain a mighty pyre
 the warriors wakened :¹ the wood-smoke rose
 swart o'er the red glow, roaring flame,
 mingled with moaning (the wind was whist²)
 till the heat had broken the house of bones,
 melt in its bosom. Mourning-hearted
 they moaned the sorrow, a master's death.
 Likewise the widow, a woful song. . . .³

* * * * *

Then the Weder people wrought anon
 on the cliff a barrow broad and high,
 by ocean farers easily seen,
 and within the tide of ten days built
 the bold-one's beacon, *by burnt-out pyre*,⁴
 and wrought them a wall, as worthiest seemed
 to wisest men who weighed the matter.
 Then they put in the barrow bracelets and rings,
 all the treasure taken before
 out of the hoard by the hero-band.
 They left earl's riches for earth to hold,
 the gold in ground, where again it lies
 useless to men as ever it was.
 Then round the barrow brave men rode,
 sons of æthelings, twelve in all,
 would moan their misery, mourn the king,
 say their sorrow, and speak in laud,
 praise his prowess, his powerful doing,
 worthily laud him, as well beseemeth
 men to praise their master-friend,
 heartily love, when hence he goeth
 from life of the body forlorn away.

¹ A favorite trope in A.-S.; here = "kindle," "fan into flame."

² Another reading: —

roaring played,
 mingled with weeping of winds, the flame.

³ The text is very difficult here, on account of defects in the Ms.

⁴ Bugge. Others read "bronda betost."

So mourn'd their master the men of Jutland,
 fall of the hero his hearth-companions,
 counted him of the kings of earth,
 of men the mildest and most beloved,
 to his kin the kindest, keenest for praise!

No one can fail to see the likeness between this burial of *Béowulf* and the ceremonies at the funeral of Attila.

The whole logic of the primitive funeral was based on a supposition that the spirit sundered from the body lived after death. The grave is a house, — *eorðhús*. “Immortality,” if we may use such an expression, was assumed without question and lies fossil-like in ancient speech. Phrases like “faring to another light,” found plentifully in Anglo-Saxon and Old Norse, are of heathen origin, and must not be referred to theology of later times.¹ Gudrun says she is fain to go to another light;² and in *Béowulf*, one “gave up the joyous life of men, he chose God’s light.” The phrase is here lightly touched with the new theology, but is of far older origin. Even the *Héliand* clings to ancient expression and the simpler form: *sóikian liocht óðar*, to seek the other light. Other kennings for death are significant, as “to go” — from world, body, house, hall, “to go” forth or hence, “to seek the joyless place,” “to part soul and body.” Of a certain prince we are told, “his father had gone elsewhere.” Death is called “the journey,” “the miserable journey,” or “the parting of the soul.” Sometimes the body is

¹ For lists, see Bode, *Kenningar*; and Vilmar, *Altert. im Héliand*, p. 20, note 2.

² *Fara i liós annat. Atlamál*, 84. 8.

regarded as a garment which man doffs at death.¹ The summons to depart comes "at the hour of fate"; then it was that old Scyld fared forth. The Viking heroes of Scandinavia expected the fixed moment of Odin's choosing; and the word "fey," still known in Scotland, was once the commonest of Germanic words. "There die," says a character in the Nibelungen Lay, "only the doomed ones," — *ez sterbent wan die veigen*. "Danger (a pit, abyss) is everywhere for the doomed one," is a Norse parallel.² This combination of the sense of fatalism with implicit belief in a future life leads, we all know, to the highest conditions of bravery and contempt for death; and, indeed, it takes us quite away from the realm of daily Germanic custom. Across the border-land of the funeral, we come into the wide domain of religion.

¹ Here we may compare the swan-raiment of wise women and the belief in werewolves. See Mannhardt, *Germ. Mythen*, p. 692.

CHAPTER XII

THE WORSHIP OF THE DEAD

Germanic religion in general — Cult and creed — Heathen scepticism — Agreement of old and new faiths — Cult of ancestors, and superstitions about the dead — Survivals — All Souls — Swiss customs — Heathen rites made Christian — The patron-saint and the *fylgja*.

RELIGION in general has two sides, the cult and the creed. Primarily, the cult is a series of ceremonial acts, rather than a system of what we should call worship; and the creed is not so much a logical statement of belief as a record or tradition, which, nowhere definitely set down, finds expression in a number of more or less coherent tales about supernatural persons and supernatural experiences. Or, we may put the dualism in a different fashion. Religion rests upon ethics and emotion. In its primitive stages the ethical phase is entirely occupied by a sense of duty to demonic powers, — a slavish sense of duty as to a master who must be obeyed in fear and trembling; and the emotion is wholly a sense of wonder at inexplicable facts and processes, mainly of the physical universe, which spur the fancy to express the superhuman in terms of the human, and in the shape which we call a myth. That is, myths are

a series of compromises between the tendency to project personality into all operations of nature, and the tendency to seek such a cause for these operations as shall be wholly free from observed human impotence. The history of cult and ceremonial religion traces the development of an ethical sense, from physical offering and sacrifice through symbolical rites up to the notion of duty to one's fellows as the outcome of duty to one's God. The history of religious emotion, on the other hand, is for all early stages a part of the history of poetry,¹ and must chronicle the attempts of the human mind to set in order and realize its sense of wonder at the supernatural. The realization of this sense of wonder is expressed in the myth, and a series of myths may foster a primitive creed.² From both of these great religious factors, the ceremony and the myth, constantly there slips and escapes the living faith which gives them being. But, notwithstanding this loss of vitality, myth and rite remain firm, and form a part of traditional religion. Long after the living sense for a myth, or the tangible belief in a divinity, has lapsed from people's mind, the cult and creed survive, and men go through form after form, careless of the reason, but tenacious of the ancient rite. It is evident, however, that the work of destruction or indifference is far more swift with creed than with ceremony. Creed is a garment which one may hold more or less dear, but not refuse to discard; cult is the habitual round of one's

¹ *Quellen u. Forschungen*, No. 51, Müllenhoff's preface to Mannhardt's *Mythol. Forsch.* p. viii. f.

² Rationalistic elements enter very early into the making of myths, as where a story is told to explain what has hitherto passed as inexplicable.

life which one easily identifies with life itself. It follows, therefore, that in an early stage of the decline of a great religious system we should find the creed uncertain and easily uprooted, the cult still vigorous and tenacious of its place.

Precisely in such a condition we find the heathenism of the Germanic race at the time of its early contact with Rome and Christianity; and precisely for these causes we can understand the ease with which Christian doctrines, allied with the new culture and the new lore which so dazzled our forefathers, battered down what ought to have been stubborn barriers of inherited Germanic belief. With admirable discretion, the early missionaries made their main assault on the belief, and left the custom and ceremony to be undermined by slow siege, or driven away by strategy.¹ Pope Gregory laid down this admirable system in his advice to certain preachers of the new faith in heathen England; and urged in all possible cases a toleration of old rites or else a gentle wresting of them into Christian uses.² If the heathen have been sacrificing oxen to their idols and holding feasts, let the oxen still be slaughtered, the

¹ This policy was not always adopted. The missionaries who, in the eighth century, sought to convert the Frisians and Saxons, were extremely violent in their methods, and began their work by abrupt attack upon the dearest heathen sanctities. See von Richthofen, *Friesische Rechtsgesch.* II. 411 ff. He contrasts all this with the mild conversion of Iceland.

² Beda, *Hist. Ecc.* I. 30 (ed. Holder). This chapter is of great importance for the subject. See specially the passage: ". . . fana idolorum destrui . . . minime debeant; sed ipsa, quæ in eis sunt, idola destruantur; aqua benedicta fiat, in eisdem fanis aspergatur, altaria construentur, reliquiæ ponantur." As a result, the new church bore in many cases close resemblance to the heathen temple. For Scandinavia, see Henry Petersen, *Om Nordboernes Gudedyrkelse og Gudetro i Hedenold*, p. 22.

feasts still be held, *nec diabolo . . . sed ad laudem dei*. "Concentrate your attack," said, in effect, the wise pope, "upon the false gods¹ and the false belief: deal tenderly with immemorial customs. Destroy the idols, but spare the altars and the temple." Precisely in this strain, Remigius laid his famous command upon the just converted king of the Franks: "Adore what thou hast burnt! Burn what thou hast adored!"

The attack upon heathen divinities was made yet easier by a certain spirit of doubt which had begun to affect the Germanic mind itself. Thoughtful souls were reaching after something better than the worn-out tales of a rude mythology, and daring souls had flung all faith aside. Our best view of a race on this border between an old and a new religion is in Scandinavia. Many a hard-headed Norseman mocked at the old-wives' tales of the Edda, and snapped his huge Viking fingers at an Odin or a Thor. At Thronhjelm in the days of Hakon Jarl, Svend, a worshipper of Thor, pleaded with his son Finn, who had insulted the ancestral god. Thor, urged Svend, had crushed the rocks and fared through the mountains; Odin gave victory. "It is no great matter," answered Finn, "to break up stones or to conquer by witchcraft. He is the mighty god who has first of all created hill and sky and sea."² The Iclander

¹ The debate between Frankish Clovis and his Christian wife hinges on the true or false nature of the heathen gods (where the tirade against Jupiter and the others is, of course, mere monkish invention). And very significant is the king's remark about the Christian deity: "He is not even of our race of gods!" See *Greg. Tur.* II. 29, and Rettberg, *Kirchengeschichte Deutschlands*, I. 273.

² P. E. Müller, *Sagabibliothek*, III. 322.

Thorkell, as his end drew near, commended his soul "to him that created the sun."¹ Men turned in disgust from the rout of weak or knavish gods. In the saga of Hrolf Kraki, we are told that King Hrolf and his men honored no gods, but trusted in their own might.² "Not Odin," cries another, "but chance rules over the life of man." "I am an old man," urged Ketil; "see how long I have lived, and yet I have never honored Odin." Down at Byzantium, a sturdy heathen Icelander was asked by the Greek emperor in whom, then, he believed. "In myself," was the reply. Hrafinkel says, "I hold it folly to believe in gods." Among Anglo-Saxons, the very ministers of the old faith stood ready to welcome the new. We all know Beda's two stories, one of Coifi, the high-priest, who rode spear in hand to shatter the temple of his own gods; the other, of that old Northumbrian counsellor who told his king that since life was but as a bird's flight through their own warm and lighted hall, in from the darkness and out into the darkness,—since their own faith had nothing to say of that outer dark, let them welcome the new faith which could. Energy of fresh and high belief overwhelmed half-hearted followers of custom. When Christian and heathen were contending in Iceland what religion the whole nation should adopt, the heathens proposed to sacrifice eight men to the gods. The Christians answered by calling on the same number of men to take the vows of a pure life,—a proposal accepted at once by the adherents of the new

¹ W. Müller, *Geschichte u. System d. altdeutschen Religion* (henceforth *System*), p. 100.

² See Dahn, *Bausteine*, I. 133-135, where many examples are given.

faith, while on the heathen side no volunteers whatever could be found.¹

Christian dogma had an easy victory. It was a compact and logical system elaborated by the subtlest intellects of the time, and it swept the loose array of myths and traditions from the field. But the old rites, the old ceremonies, and even the shadowy forms of old gods and goddesses, so far as they had been connected with cult, lived on. The rout of spirits and demons, with a slight change by way of adaptation to the new creed, were undisturbed, and held their old places in fireside tradition and fireside cult. On certain homely occasions even the great divinities of heathendom could be invoked. Says J. Grimm:² "People who held in strictness all the Christian creed and were ready to persecute and damn the doubter about trinitarian dogmas or the sinner who broke a fast, had no scruples in time of bodily disease, even if only a finger was hurt, to recite incantations in which the old gods were called upon for help." Even in the seventeenth century, a Scandinavian toothache was best banned by a direct appeal, and even a sort of sacrifice, to Thor. Moreover, there were many instances where men endeavored to serve at once the old gods and the new faith; such was the case with Æthelbert of Kent, who allowed images of heathen deities to stand by the Christian altars.³ In Frankish Germany, during the eighth century, we hear of priests who sacrifice to Wuotan (Woden), attend the heathen feasts, and yet profess

¹ Vigfusson-Powell, *C. P. B.* I. 140, and references.

² *Ueber Marcellus Burdigalensis*, Kl. Schr. II. 115.

³ Grimm, *D. M.*⁴ III. 7.

themselves Christians and administer the rite of baptism.¹ Again, the new religion had yet another ally in addition to the waning belief of heathendom. There were articles of faith in the old creed which substantially agreed with important tenets of the new.² The church assured and defined that vague but insistent belief in personal immortality which is common to half-civilized men the world over; it emphasized the sense of horror, felt as strongly by the barbarian as by Milton,³ at the thought of a human soul going out like a candle-flame in the dark. The soldiers of Ariovistus fought with such desperate courage, explained the Roman historian, because they knew death to be a mere transition to another life. This, of course, is no Germanic peculiarity. The Celtic druids held so strongly to the notion of immortality that they actually contracted debts which were to be paid in the next world.⁴ Often at a Celtic banquet, when the mirth grew dull, some accommodating young warrior would kill himself in novel or artistic fashion to divert the guests; it was only a step into another group, where with old comrades he could wait — in those days, not very long — for the rest of

¹ See Rettberg, I. 326.

² Rettberg, I. 247 f., remarks that ethical tendencies of our heathendom, the high value set on chastity and certain forms of justice, would welcome analogous tendencies, more sharply outlined, of the new religion.

³ *Paradise Lost*, II. 146:

To be no more : sad cure ; for who would lose,
 Though full of pain, this intellectual being,
 Those thoughts that wander through eternity,
 To perish rather, swallowed up and lost
 In the wide womb of uncreated night,
 Devoid of sense and motion ?

⁴ Cæsar *B. G.* VI. 14, and Holtzmann, *Deutsche Mythol.* p. 196.

the company. These same Celts sold themselves to be killed, for a sum of money, or even for a few casks of wine.¹ This is crude fatalism; and we must admit that the church vigorously opposed such a phase of the belief in immortality: our own English Ælfric, for example, is eloquent against it. But the more general notion of immortality was fixed in the heathen mind; the new religion individualized, ennobled, and confirmed the faith. To put it briefly, Christianity forbade that a man's future should be merged, after the heathen fashion, in the future of his family or clan; it treated him as an individual and mediated directly between him and God. This personal religion began by slow degrees to take its place in the midst of collective and ceremonial religion; and thus arose that great modern fact which we call sentiment. Contrast the ceremonial worship of a heathen clan with the personal sentiment of a mediæval hymn! Contrast the chorus, the feast, the wide pagan publicity of worship (and the church took care to preserve a plenty of this element) with the direct and piercing individualism of the monk who in his solitary fervor poured out such words as these: —

O Deus, ego amo te! . . .
 Tu, tu, mi Jesu, totum me
 Amplexus es in cruce,
 Tulisti . . .
 Innumeros dolores,
 Sudores et angores,
 Et mortem et hæc propter me,
 Ah! pro me peccatore!

State and family religion, with the head of state

¹ See Mommsen, *Rome*, Dickson's transl. p. 277.

or family as priest, yielded ground to the personal expression of awe, of reverence, of love; the mere sense of conduct, modern writers would say, became the sense of conduct touched by emotion. From our notion of primitive religion, and especially of Germanic heathendom, we must take pains to clear away this element of emotion which we are so apt to regard as the chief part of religion itself. Where to seek the beginnings of sentiment as a factor in domestic, social, or religious life, is a difficult problem; but recent writers agree that it is foreign to primitive races, and even that it is a result, not a cause of culture. Certainly the church did much to spread it over rough mediæval life; everywhere we find her ritual touching ancient custom with this new grace of emotion. The old perfunctory service to the dead, the journey to a burial-place, and the food or treasure heaped upon an ancestor's grave, became a memorial service and a wreath of flowers; the act, once all in all, became a symbol, for modern worship places or professes to place more weight on the spirit than on the act. "The kingdom of God is within you." It is therefore necessary to put aside our modern notion of worship when we come to examine the religion of the early Germans. We have seen that a certain scepticism about the tales of their mythology, a certain familiarity with prominent parts of the new doctrine, made them comparatively docile converts to a new faith; but what we most need to consider is the nature of their actual cult, the observance of their practical religion, as compared with the pomp and ritual of Rome. How much of this pomp was

forced upon the church in place of the earlier simplicity of apostolic times, is an open question. Not only the ceremonies incident to a state religion brought about the change; the barbaric races, soon to be the great props of the church, were incapable of any worship which scorned external helps and which needed only the fervor of the heart. Hence the accommodation to heathen custom, the feasts, the saints'-days; hence all the external attractions, and the subsequent enlisting of every art from music to the drama.

It is evident from the foregoing considerations that the one religious element which entered into the life of our forefathers was the round of ceremonies and observances, the cult. Myths belong elsewhere, and are a part of Germanic literature, of Germanic poetry. In these pages we are concerned with the cult, and shall appeal to mythology only so far as it throws light upon the history of Germanic ceremony and superstition.

A form of worship found in all low grades of culture, and existing everywhere in more or less obvious survival, is the worship of the dead.¹ A favorite with writers on anthropology, this territory has been heretofore greatly neglected by the mythologists. At present, however, it is getting more and more attention, and must be recognized as one of the most important divisions in the study of religious develop-

¹ For the sources of our information about Germanic worship, see Grimm, *D. M.*,⁴ *Vorrede*, Bd. II., especially pp. x. ff.; and E. Mogk in Paul's *Grdr. d. germ. Phil.* I. 984 ff. See the same work, 998 ff., for the special subject of this chapter, and references.

ment.¹ We may in the main accept for Germanic people generally the statement of Vigfusson and Powell, with regard to Scandinavian antiquity, that "the habitual and household worship of ancestors" was "the main cult of the older religion."²

This worship of the dead we shall assume as a definite fact in primitive culture, and shall make little inquiry in regard to its origin.³ The dead were thought to lead as spirits an existence which closely resembled actual life; as head of a family, the dead man exacted tribute from his surviving children and grandchildren; they continued to obey his supposed demands, and perhaps ascribed petty but mysterious ailments to his anger at neglected duty. At least, we have the well-known modern instance of an African chief who suddenly took leave of his white guest, saying that since his head ached violently, he knew that his dead father was scolding him, and he must hasten to offer something to the angry spirit. A regular cult

¹ E. H. Meyer formally incorporates it in his system of mythology (*Indogermanische Mythen*, I. 1883; II. 1887). Holtzmann recognized it, cautiously enough, saying that a material part of the old heathen religion was worship and service of ancestors. Perhaps, he adds, "it was harder for the church to suppress this sort of worship than the worship of the gods" (*Deutsche Myth.* p. 202). He had leaned to the same opinion in his *Germanische Alterthümer*. Vigfusson and Powell assert the fondness of Scandinavians for this manes-cult, and cite the testimony of Jordanes for its popularity among the Goths; ancestors of the royal Gothic house were *Anses*, — "not men, but demigods," — who were worshipped by their descendants. J. Grimm himself collects abundant material in regard to the survivals and traditions of such worship. See especially Chap. XXXI. of the *Mythology*.

² *C. P. B.* I. 413.

³ Ample material in Spencer, *Sociology*; Tylor, *Primitive Culture* and *Early History of Mankind*; Lippert, *Culturgeschichte*, etc. For an opposing theory, see the introduction (by J. S. Stuart-Glennie, M.A.) to Lucy M. Garnett's *The Women of Turkey and Their Folk-Lore: The Christian Women*, London and New York, 1890.

of the dead is one of the stubbornest facts of human history, and in the refined form of "Spiritualism" counts thousands and thousands of votaries to-day. In its grosser manifestations, it was contrary to the teachings of Christianity, and hence our best information in regard to a Germanic spirit-cult is to be found in the various edicts and regulations of the early church. The canons of Eadgar¹ forbid swearing or bewitching *by means of the dead*; *licwîgelung* is evidently the same as necromancy; and proof that this ban was needed may be found in an old interpretation of dreams,—taken, of course, from the Latin, but current and approved in Anglo-Saxon popular lore,—which tells us that it is a token of good fortune to talk with the dead.² "If [one] dreams that he kisses a dead man, that is good and long life."³ That the neighborhood of sepulchres hallowed a place and made it likely to prosper, was a widespread belief. An Anglo-Saxon charm or incantation, one of several for the use of women in pregnancy, opens with the following directions: "The woman who cannot bring forth her child should go to a dead man's grave (*birgenne*), and step thrice over the grave and speak then these words. . . ." And further on in the same charm (v. 15), we have the efficacy of the "barrow" or sepulchre more directly attested.⁴ So, too, there seems to have been at Anglo-Saxon funerals more or less heathen ceremony which pointed directly to the wor-

ship of the dead. Ælfric tells¹ the priests of his time not to go to funerals unless invited, a praiseworthy but commonplace piece of advice; then, however, adds that if they do go, they are to forbid "the heathen songs of the laity (*læwedra*) and their loud laughter," and not to eat nor drink where the corpse is lying; this he commands in order that good churchmen shall not imitate heathen ways. Further,² the *Indiculus Superstitionum et Paganiarum*, referring to the continental Saxons and dating from the year 743, speaks first of all *de sacrilegio ad sepulchra mortuorum* and *de sacrilegio super defunctos, id est, "dadsisas,"* — of sacrilege at the graves of the dead, and of sacrilege over dead persons; that is, *dadsisas*. This last word is explained by Grimm³ as a "song of lament for the dead"; and that it was not a mere funeral-song as we understand the phrase, but rather belonged with offerings and sacrificial rites to the dead, is made probable by the urgent opposition of the church. In the Anglo-Saxon Confessional of Ecgberht it is provided that "whosoever in the place where a man lies dead shall burn corn for the good of living persons and in his house,⁴ shall fast five winters." The corn was burnt for the benefit of the dead man, who would for this reason look with favor upon the survivors. Again and again the church forbids these offerings and songs and other ceremonies in connection with

¹ Thorpe, *Ancient Laws and Institutes*, p. 448. Most of the older literature on this subject was collected by Bouterwek in the introduction to his *Cædmon*.

⁴ As Bouterwek (*Cædmon*, p. lxxxvii.) notes, the Latin text reads "pro sanitate viventium et domus."

the dead;¹ and there can be no doubt that it was a matter of worship rather than of ordinary grief. The Anglo-Saxon barrow-song or lyke-song² was no mere threnody. People prayed by night, standing at the ancient places of burial; originally the prayers were to the dead, but, no doubt, in course of time were directed to gods or demigods of tradition, for whom the grave-stone served as an altar.

Popular faith had little to do with abstractions; and when the dead were addressed in prayer, they were thought to be personally involved in a palpable and questionable shape. Hence the many spells or incantations to raise the dead and bid them open mysteries of the present or the future. Hence the Old Norse *valgaldr*, a charm or incantation meant to awaken the sleeper from his heavy death-slumber; in particular, it is a spell by which Odin forces the sibyl to rise from her grave and foretell the fate of Balder.³ "On Woden rode . . . till he came to the lofty hall of Hell, then Woden rode to its eastern gate where he knew the sibyl's barrow stood. He fell to chanting the mighty spells that move the dead (*valgaldr*), till she rose all unwilling and her corpse spake." Schullerus⁴ cites a similar case in Saxo Grammaticus, where Hadingus wishes to ascertain particulars of his own fate, and compels a dead man to give the required information; bits of wood are

¹ Christian priests took part in them, to the great scandal of the church. Rettberg, I. 326.

laid under his tongue, a device which reminds us somewhat of the miracle told in Chaucer's *Prioresses Tale*, and the corpse thereupon begins to speak. Of course, *dira carmina*, runes and incantations, are written on these fragments. In another Old Norse poem,¹ the disguised Odin says that he learned his sharp words from the old people who live "in the home-graves."² Everywhere in the old Scandinavian life we find traces of this direct worship of the dead; sacrifices were made to them in order to insure good crops, and the ceremony was conducted by the head of the family among the ancestral graves.³ Authr was a rich woman who had embraced the new faith; but when she was dead and buried in a certain mountain, her descendants, who kept their heathendom, made an altar there and brought sacrifice, and believed that all of Authr's kin would gather after death within this mountain.⁴ It is easy, as many scholars have pointed out, to see the connection between this worship of ancestral dead near the cave or hill in which they are buried, and the countless myths and legends which tell of a prince or chieftain who "sleeps" in a mountain, and will one day ride forth to conquest.⁵ The sacrificial feast at an ancestral grave lingered long in survival. In the Prologue to the *Canterbury Tales*,⁶ we are told that certain craftsmen had so prospered in the world that they were fit to be aldermen; and

to this dignity their wives would surely make no objection, for —

It is ful fair to ben yclept *Madame*,
And gon to vigilies al byfore,
And have a mantel riallyche ibore. . . .

Precedence, a matter of old tradition evidently, obtained at the *vigilies*, that is, the meetings of the parishioners “in their church-houses or church-yards, where they were wont to have a drinking-fit for the time,” and where “they used to end many quarrels between neighbor and neighbor.” In 1638, “one of the Suffolk articles of inquiry was: ‘Have any *Playes, Feasts, Banquets, Suppers, Church Ales, Drinkings, Temporal Courts or Leets, Lay Juries, Musters, Exercise of Dancing, Stoole ball, Foot ball*, or the like, or any other profane usage been suffered to be kept in your Church, Chappell or Church Yard?’”¹ It is easy to see the connection with ancient rites. Dancing in graveyards gave frequent scandal in England; and we shall presently see the same survival in the rites of burial.

Recurring to the actual worship of the dead, we find testimony in Beda,² who, speaking of the several months, says that February, called *solmonath*, is the “month of *cakes*,” which at this time were offered by the heathen to their gods;³ whereupon Holtzmann remarks that for “gods” we should probably read “spirits” — *manibus*.⁴ These offerings were made

at the graves, which then as now were marked by stones; church edicts keep forbidding laymen to make sacrifice "at stones." *Kristnisaga* tells of a bishop who sang Christian spells over a stone where the "family spirit" was thought to dwell; at last the piety of the prelate had its reward, and the stone burst asunder.¹

The dead were supposed to abide either in the immediate tomb or else in that vast realm which is only the infinite projection of the tomb, the so-called underworld or domain of hell. So that the inmate, when conjured to appear, may make immediate appearance, or else come as from a long journey. When Odin's strong charm conjures up the sibyl, she complains: "What mortal is it . . . that hath put me to this weary journey? I have been snowed on with the snow, I have been beaten with the rain, I have been drenched with the dew, long have I been dead."² Similarly, Helgi's appearance is described by Sigrun, when she meets him at the barrow. We are justified in assuming with Schullerus that the grave is in the closest connection with Hel's cold and dreary dominions.³ Mostly, however, the dead are conceived to be close at hand, resting in the narrow cell or invisibly haunting the scenes of their active life.⁴ Significant perhaps in this regard is the saying of Tacitus about Germanic sepulchres,⁵ that no monuments are raised above them because such would be too heavy for the departed;⁶ it may be, however, only a piece of Tacitean

rhetoric, with chief application to the pomp of Roman burial. Certainly the dead were thought to continue their existence in the tomb, and hence we find the earliest barrow built in the shape of a house, where the body or even the ashes of the old freeman could still find a home. The Viking who lived on the sea was fain to have a ship-tomb. If we may believe many writers on sociology, the temple of worship is merely a development of the house built over the dead, where the altar represents the sepulchre itself.

The custom of carrying food to graves and of eating near them, is a survival of the greater banquets and sacrificial ceremonies at the tomb, where the dead and the living were supposed to share the feast. Drinking with the dead became drinking to the dead; hence the Roman libation and our modern silent toast, known in olden times as the Minne Drink. "At the burial of a [Scandinavian] king, a beaker was presented which was called Bragafull; every one present arose, made a solemn vow and emptied it. . . . This custom was not given up at the conversion, but one drank the *minne* of Christ or of Mary or of one of the saints."¹ *Minne* is "loving memory." The *erfi* or wake in Old Norse times was a most important affair, and we read of guests to the number of fourteen hundred; while in England the *arval* or *arvil* was kept up until comparatively modern times, with such outlay for food and drink that "it cost less to portion off a daughter than to bury a dead wife."² Jordanes tells of the endless feasting and drinking of the Huns at the burial of Attila, a ceremony which was called

² Brand, "Funeral Entertainments."

strava.¹ Moreover, the games which were celebrated at the funeral of an important personage seemed to have been meant in the earliest times as an affair in which the dead man took actual part. For some reason these feasts and games were specially forbidden by clerical authorities; but an easy compensation was offered in a custom which amounted to little less than actual worship of the dead,—the saints’-days celebrated by the church. “All Souls” is a significant name. A general feast, which we may take to have been in honor of the dead, was held by the ancient Germans, and is mentioned by Widukind, abbot of the monastery at Corvey on the Weser, who about 980 wrote a history of the (continental) Saxons. “Thereupon² for three days they held their feast of victory, shared the booty, paid the wonted military honors to their slain companions, and praised unmeasurably the courage of their general. . . . Now all this happened, as runs the tradition of our forefathers, on the first of October, and these heathen festivals have been changed by the consecration of pious men, into fasting and prayer and offerings for all departed Christian souls.”³ There can be no doubt that Widukind’s story deals with no isolated event, but with an immemorial Germanic rite.

This time-honored and doubtless precious ceremony of Germanic heathendom the church accepted with but slight modification. It was called the feast of All Souls, and was placed, not far from its old date, on the second day of November; autumn is the

¹ Jordan. XLIX.

³ Widukind (in *Geschichtschreiber d. deutsch. Vorzeit*) I. 12. Cf. also W. Müller, *System*, p. 74.

proper season for any *memento mori*, and with the equinoctial storms, the fall of leaf, the frost, the roar of winds when Woden and his train of spirits sweep the sky, man easily blends the universal picture of decay and the remembrance of parted souls.¹ The meaning of this All-Souls festival lingered long among the peasants of modern Europe, and does not lack analogy in older systems. Grimm² sees connection between this feast, when people visit graveyards and lay garlands on the tomb, and the three festal days in Roman custom, when the underworld was thought to open and the spirits to revisit upper air. On the night of the second of November, the Esthonnians set out food for the spirits; and near Dorpat, souls of the departed are then received in the bath-room and, one after the other, bathed. That the church has so purged away the grosser elements of this festival and made it a memorial service, does infinite credit to those who brought about the change; and it reflects little honor on the Protestants to have abolished it.³

Such universal worship of the dead reflected the private and particular custom. Every hearthstone was an altar, and the father of the family was its priest. Wherever settled abodes were known, this altar was hallowed, and in many cases the fire burned there without intermission throughout the year. Here lingered the ancestral spirits, protecting and helpful; and here the head of the family offered to them food and drink, asked their help, cast lots, and sang the

³ It has been restored in the reformed church of Prussia and Saxony. Pfannenschmidt, *Erntefeste*, p. 168.

incantation. The great memorial feasts of the people which Widukind describes were matched by the private feasts of the different families. The funeral itself was only the first of a series of feasts; the dead man took his place among the ancestral spirits, and the survivors shared with him and his new associates the food, the drink, the song, and the dance. In the eighth century, popes were forced to forbid the too outspoken heathen character of a popular funeral, the "profana sacrilegia mortuorum."¹ We have seen Ælfric's advice to the priests of England that they should not frequent funerals of this sort. But the church was far too wise to undertake any sweeping measure. The old rites were forbidden so far as the grosser heathen characteristics of them were concerned, or were changed, when it was practicable, into petty ceremonies, or, finally, were permitted to endure in a lingering and for the most part dwindling survival. For English customs, the collection of Brand² gives ample material; and the survivals of southern Germany and Switzerland have been carefully studied by Rochholz.³ Whoever, in Switzerland, has the duty of watching with a corpse, must have unlimited supply of brandy and wine. Prodigality and reckless expenditure prevail among this otherwise economical and thrifty race so soon as a funeral is concerned; they believe that any meanness displayed at this time on the part of the heirs will rob the dead man of his rest in the grave. It is

¹ Cf. Pfannenschmidt, *Erntefeste*, p. 166; the pope is Gregory III. in 739.

not hard to summon a host of parallel cases, from the funeral of an Irish Romanist to-day, back to the peculiar ceremonies among the Finnish tribes described to King Alfred by the sailor Wulfstan. During one of these peasant funerals in Switzerland the bake-oven in the house of death must not become cold for the space of three days between decease and burial; bread and cheese are free to all comers. Food of this sort, thinks the peasant, gives far more strength than does one's daily bread: an ounce goes as far now as two pounds eaten at another time!¹ A person known as the *Leidfrau* or mourning-woman is charged with the main ceremonies; and cases² are on record where a part of her duty was to offer bread, salt, and wine to the spirits of the house, the ancestral souls. Before the coffin is closed — we are still with Rochholz's Swiss peasants — each member of the family grasps in farewell the hand of the deceased. During the actual bearing of the body to its last resting-place, bread and wine are distributed. The burial over, — and the corpse of the Christian peasant like that of his heathen ancestor must be buried facing east, — there are thirty days of mourning; the third, the seventh, and the thirtieth of these are celebrated by certain rites in the church. Every morning, however, the *Leidfrau* goes to mass; says thirty pater-nosters at the grave on the first, and one less each day during the month; and has numerous other duties to perform, in return for which she has prescribed allowance of food and drink, a new garment, and, above all, place at the funeral-feasts. These, as Rochholz says, make the chief article of the Swiss

¹ Rochholz, p. 195.

² As late as 1860 in Servia.

peasant's luxury in life. Peasants of to-day still think the more they eat and drink at a funeral, "the better it is for the dead." Church and state have been trying for a thousand years to reduce the size and cost of these banquets; and here we see again the ethical character of Christianity face to face with the merely ceremonial nature of heathendom. The church could not brook singing, revel, and actual dancing at this solemn ceremony, and held up the duty of genuine sorrow for the dead. Repeated decrees insisted on the "diabolical" character, "contrary to human nature," of such customs; and forbade as far as possible the rude revelry and noise. Such remains of the old habit as were tolerated by the authorities became in due time the theme of attack by reforming opponents of the church; and as late as our own century there are cases of actual dancing in honor of the dead, preceded of course by a sort of memorial service, in mourning garb, within the church.¹ Add to these grosser survivals the minor superstitions of peasants everywhere in Europe, the bit of food flung into the fire, thrown out of the window, or set upon the roof "for the poor spirits," the lore of house-goblins, and the little observances of the same sort practised by the laborer in the field,—all these things point to the once universal cult of the dead.²

Where survival seemed dangerous, and where actual uprooting was unwise, the church turned a heathen ceremony into a special Christian rite. The

¹ Rochholz, p. 317.

² For feasts with the dead, see further Tylor, *Primitive Culture*, Chaps. XI., XII., and particularly Vol. II. 30 ff.

offerings to the dead¹ were converted into gifts for the parish poor; and we even find the two objects recognized for the same act. Thus Rochholz quotes from the Confessions of St. Augustine an account of the practice of eating and drinking among the graves, and giving a share to the poor, — a custom of certain Christians in which the pious mother of the saint had shared. But in more modern times the feeding of the poor has excluded older rites. Poor and sick folk took the place of the dead; and the gifts of corn and wine were often fixed for certain days, especially when the benefaction assumed the form of a legacy or a gift of the dead man's heirs. As regards the original purpose of offerings to the spirit, it is needless to point out how closely the practice of buying masses for the dead would fit ancestral notions. Tylor² quotes the invective of a Manichæan who charges the Christians with keeping the heathen ceremonial under a new name: "Their sacrifices indeed ye have turned into love-feasts, their idols into martyrs, whom with like vows ye worship; ye appease the shades of the dead with wine and meals, ye celebrate the Gentiles' solemn days with them. . . ."³ Thus the church, true to its general theory that sorrow of a practical character should take the place of mere revel and a crass notion of the dead man's participation, instituted the solemn ceremony of masses for the dead, an infinite gain over older and ruder rites. With

¹ An allusion to this among other races is found in Tobit, iv. 17. "Pour out thy bread on the burial of the just, but give nothing to the wicked."

² *P. C.* II. 34 f. Cf. also Hampson, *Medii Ævi Kalendarium*, 53 f.

³ Tylor (p. 35) gives a number of survivals, coming down to modern times.

the steady growth of the doctrines concerning purgatory, masses for the dead assumed an overwhelming importance. Moreover, the church encouraged the worship of patron-saints, and in this way kept up a venerable institution of heathendom. For the patron-saint seems to be legitimate successor of the "guardian angel," the "genius," and that attendant spirit in which the old Germans believed. Germanic belief gave to every man a protecting spirit or follower; we find the best information on the matter in Scandinavian records.¹ In the later development of Norse mythology, the Valkyrias seem often to take this part; they follow and protect a chosen hero, and at his death conduct him to Valhalla. In the legends of later Europe, many a wood-fay, white lady, or fairy, may still become in this way the protecting spirit of some hero and share his mortal love. We have seen Svava waiting on her Helgi, and Sigrun protecting Helgi Hundingsbani; Sigdrifa, who is really Brynhild, loves Sigurd.² But men believed in a more prosaic spirit, — a far older belief than this offspring of the Viking age, — the *fylgja*, an invisible guardian, only to be seen when one was nigh unto death. We remember how Drusus, just before his fatal accident, saw a sort of *fylgja*; it was in the shape of a barbarian woman, gigantic in form, who told him he dare go no further. So Alexander Severus saw a similar figure that prophesied misfortune; and even Attila was confronted by a rune-maiden who warned him thrice: "Back, Attila!" In the *Njalssaga*,³ a heathen Iclander is converted under the condition

¹ Survivals collected by Rochholz, I. 92-130. ² Grimm, *D. M.*⁴ 351.

³ C. 101.

that he may have the Archangel Michael for his "following angel," *fylgja engill*; and Grimm¹ notes that Michael was the Christian receiver of souls. To see this following-spirit meant death; sometimes one saw it in shape of beast or bird. Bjarki saw his as a bear; raven, and later, swan, perform a similar office.² An English name for this *fylgja* is the *fetch*, familiar enough in popular superstition; while its highest type is the conception of a general "following-spirit," fate itself, to which our ancestors gave the name of *Wyrd*,—

The wirdes that we clepen destanye,

as Chaucer³ puts it. This conception of overmastering and irrevocable fate makes dark background in our oldest epic, existing side by side with Christian influences. "Wyrd wove me this," says the Anglo-Saxon; and approaching death is stated in similar terms: "thy Wyrd stands near thee." The weird sisters survive in Macbeth, and are to be considered more particularly in another chapter. "I thought I saw dead women, poorly clad, come in here to-night; they wished to choose thee, . . ." says one who will prophesy to Gunnar his approaching death.⁴

The "familiar spirit" is not far off from this *fylgja*; and both of course belong to spirit-cult. Moreover, very old expressions of our language show this notion of a spirit not under our absolute control—its precise relation to the ego was hardly matter of

¹ *D. M.* 730. The festivals of St. Michael, says Hampson, are obviously purposed "to give countenance to the worship of angels." *Medii Ævi Kalendarium*, II. 140. They are also connected with the doctrine of tutelary spirits. See Brand, *Antiquities*, under "Michaelmas."

² *D. M.*⁴ III. 266.

³ *Legende Goode Women*, "Ypermystre."

⁴ *Atlamá* in *C. P. B.* I. 335, V. and P.'s translation.

Germanic speculation — abiding within us and moving us without our wish or will. “It ran into his mind” is our “occur”; but what was the “it”? Men believed that during dream or trance, the soul in visible shape, — a mouse or a snake, for example, — could desert the body; and they seem also to have believed that something not oneself spoke within one’s own bosom. When a man begins to talk, he “unlocks the word-hoard”; when he will be silent, he bolts and bars his breast. Instead of “he spake,” the poet of *Béowulf* says: “the point of the word brake through the breast-hoard”; and in another place, “he let the word fare out.”¹ Indeed, it was no metaphor for our Germans when they said that the spirit of his ancestors spake from the breast of the son. On this inner voice, however, we must not lay too much emphasis; for the *fylgja* was mostly conceived as outside of one, a comrade and follower. The conception could widen from an individual’s *fylgja* to the good genius of family, clan, or race. In the church, St. Michael took these old functions upon himself; and Michaelmas is set apart, as Bourne suggests, for the election of municipal officers, “the civil guardians of the peace of men, perhaps . . . because the feast of angels naturally enough brings to our minds the old opinion of tutelar spirits, who have, or are thought to have, the particular charge of certain bodies of men or districts of country, as also that every man has his guardian angel who attends him from the cradle to the grave.”²

In many other ways the church perpetuated certain forms of this cult of the dead. Conspicuous martyrs,

¹ *Béow.* 2792. See Bode, *Kenningar*, p. 43.

² Brand, “Michaelmas.”

prelates, and others were canonized and practically worshipped, so that the strongly rooted custom might bear its fruit on consecrated ground of clerical ceremonies. We may sum up the whole matter in the words of Mr. E. B. Tylor: "It is plain that in our time the dead still receive worship from far the larger half of mankind, and it may have been much the same ever since the remote periods of primitive culture in which the religion of the manes probably took its rise."¹ Where we are not concerned with actual worship, as soon as we leave creed and ceremony and take up superstition, then we enter the great realm of ghosts; here the old beliefs have found their haven of refuge. The dead still visit the glimpses of the moon, rise to demand blood for their own murder, come to warn or protect or scare, — what not: and all these faded superstitions have their roots in the ancient manes-cult. Precisely the same origin must be assigned to the famous *nightmare*² and all its relatives. The "mare," a word which Kuhn connected with Latin *mori*, is evidently in its original form a spirit, a dead person, who tramples or rides its victim to death. Thence the conception passes into that of a living person who has assumed this shape; and so through all the grades of superstitious belief. Similar origin must be assigned to the *werewolf*, a person "clad" in a wolf,³ and evidently another offspring of the belief in spirits. But these various manifestations belong rather to Germanic mythology than to our present subject.

¹ *Primitive Culture*, II. 123.

² Mogk in Paul's *Grdr.* p. 1013.

³ Kögel's etymology in Mogk's article, p. 1017, note.

The place where one meets the spirits, can summon them and appease them, is by preference the burial place; but they are also fond of crossways. The time is, of course, night; and chiefly in the season of Christmas and New Year, when the nights are longest. A host of superstitions and popular observances connected with this time of the year have their roots in the primitive customs of manes-worship. On St. Thomas's day, December 21st, in an English village it was till lately the custom to deposit five shillings in a hole in a certain tombstone in the churchyard; this done, the lord of the manor could take no tithe of hay that year.¹

¹ Hampson, *Medii Ævi Kalendarium*, I. 83.

CHAPTER XIII

THE WORSHIP OF NATURE

Dualism in worship — Spirits of the natural world — House-spirits — Spirits of the air — The Mighty Women — Charms — The Wild Hunt — Spirits of the earth — Wood-spirits — Tree-worship — Water-spirits and well-worship — The Swan-maidens — Giants — Worship of the elements — Water, air, and fire — Mother Earth — Sun, moon, and stars — Day, night, and the seasons.

It is not our province to discuss problems of mythology, but a question must be asked in regard to the objects of Germanic worship. We have learned that the primitive German worshipped his ancestral spirits. Starting with this fact, many writers on anthropology endeavor to develop the whole system of Germanic deities from ancestor-worship alone. This we cannot admit. One often hears a remark quoted from Immanuel Kant to the effect that two things filled him with wonder and awe, — the starry heavens above him and the sense of moral responsibility within him. Now for primitive man we may assume an analogous dualism, corresponding of course to the undeveloped condition of his intellect. The world of dreams and of consciousness gave him the conception of spirits and the impulse to worship them. On the other hand, from the start he must have felt a not-himself

— *a not-like-himself* — in the nature that surrounded him. We assume this dualism from the outset: a cult of ancestral spirits, which chiefly haunted the tomb and the underworld; and a cult of natural forces dimly felt to be instinct with life and volition. In other words, primitive man did not delay his worship of natural forces until remote ancestors had become in some way identified with these forces. Storms might gather in the neighborhood of mountain graves, and might be attributed to ancestors, for wind and air belong to the spirits; but the bolt of lightning had no analogy in any human act and was surely never regarded as the work of an ancestor. There must have been a gigantic storm-god from the beginning of human thought; for if there was intellect enough to infer ancestral acts, there was fancy enough to imagine a superhuman power.¹

Between the worship of ancestors, known and acknowledged as such, and the cult of great divinities like Woden, lay a border-land which is not to be rashly annexed to either kingdom. We prefer to treat this worship independently; it dealt with spirits of the stream, the cave, the air, and the forest. Doubtless much of this worship once belonged to ancestors, but it soon ceased to be regarded as such. Spirits were supposed to haunt the secret places of nature, and were in many cases thought to be souls of departed men; but from the start man must have felt that the water or the cloud or the cave had a population not entirely dependent on emigration from

¹ This is counter not only to the anthropological view, but also to the system of the philologist, E. H. Meyer, who assumes (*Indogerm. Mythen*, I. 87. 210 f.) that the Pandemonium came first and out of it grew the Pantheon.

the living world of men: he must have recognized at the outset a *natura naturans*. Ancestral spirits would belong to a general locality, and would have at heart the interests of family, clan, or race. Thus we find a curious law in Iceland about the precaution to be observed by shipmasters whose boats rode at anchor in the harbors. If these boats had figure-heads, — dragon, snake, or what not, — the prow was to be turned away from the shore so that the land-spirits should not be terrified.¹ These are undoubtedly the kindly spirits of the race, guardians and protectors of their old home. But spirits assigned to some particular element have not this intimate and ancestral quality; and it was these latter spirits which became in our Christian era the object of bans and curses.

From haunted spring and dale,
Edged with poplar pale,
The parting genius was with sighing sent.

To “lay” spirits was business of the priest; the sign of the cross reminded them of a lost empire and sent them in confusion to yet remoter haunts. Thence, however, they can still be invoked, as Wagner reminds Faust, by the presumptuous and reckless man who does not shrink from dealings with them. To ban spirits and to invoke them are arts not so widely sundered as might be supposed; and the old spirit-cult lent itself readily to the new ceremonies of the church. The carpenter in Chaucer’s *Miller’s Tale*, avails himself of such a form when he wishes to cure the clerk of his pretended trance: —

¹ Maurer, *Bek. d. norweg. Stämme*, II. 231; *Landnáma*, IV. 7.

“Awake and thynk on Cristes passioun.
 I crowche¹ the from elves and from wightes.”
 Therwith the night-spel seyde he anon rightes,
 On the four halves of the hous aboute,
 And on the threisshfold of the dore withoute.
 “Lord Jhesu Crist, and seynte Benedight,
 Blesse this hous from every wikkede wight,
 Fro nyghtes mare werye the with Pater-noster;
 Wher wonestow now, seynte Petres soster?”

This passage² Tyrwhitt suspects “to be an interpolation”; but a good old English charm it is most undoubtedly, whether Chaucer’s insertion or not.

One class of spirits to be noticed at the outset have nothing to do with natural forces, and evidently belong entirely to the ancestral division. These are the house-spirits. Robin Goodfellow is a well-known English representative of the class. They dwell in cellar, garret, stall, corner, and closet; they are mostly invisible, but often appear as little men in grotesque raiment, pointed hat, and boots. Another sort of home-spirits remain invisible, and it is to avoid pinching or hurting these that one is admonished not to slam doors, throw knives about, and so forth. The cult of these spirits exists to this day in some shape. Food is given to them, and in reward they do all sorts of household work;³ our literature abounds in references to their ministrations.

With spirits of the air⁴ we enter upon a field where the mystery of natural forces is joined to the

¹ Make the sign of the cross.

² *Miller’s Tale*, 291 ff., Aldine edition of Chaucer, II. 107.

³ *D. M.*⁴ 422 f.

⁴ St. Augustine divides “in deos, homines, dæmones. . . . Nam deorum sedes in cælo, hominum in terra, in ære dæmonum.” *C. D.* VIII. 14, quoted *D. M.*⁴ III. 122.

worship of the dead. The air is of course full of spirits, for the very name of "spirit" shows this affinity; and we must try to sunder two elements in the cult of these mysterious beings. The old custom of "feeding the wind" at the approach of a storm is a case in point. The rising wind is connected with ancestral spirits; we know that when, for example, a man is hanged, or meets an equally violent death, there always arises a sudden gust of wind. The food, therefore, is partly meant for these unfortunate spirits, who seem to murmur ominously in the rising gale. But besides the souls, there is something superhuman in the storm itself, an indefinite animating presence which the worshipper desires to propitiate: and hence a part of the offering goes to this mysterious power. Thus the beings who haunt the air are doubtless to be referred in part to the worship of ancestors; but with them is connected the mystery of the element itself. As the spirits retire further and further from their ghostly character, they acquire more and more of the terrible and the overwhelming.

Let us take, first of all, the *dís* of Scandinavian superstition, a word which Grimm connects with the Anglo-Saxon *ides* (woman), and which is found as final syllable in many Norse names. The guardian angel is often a *dís*; or the word may stretch far enough to include the notion of a "goddess." We read of a temple of the *dísir* in Scandinavian worship, of sacrifice to them (*dísablót*), and of a scald or poet who sang in their honor.¹ "One harvest," — we note the season of year, — "there was made a great

¹ Cleasby-Vigfusson, *Icelandic Dict. s.v.*

sacrifice to the woman-spirits (*dísablót*) at King Alf's, and Alfhild performed the sacrifice . . . and in the night, as she was reddening the high-place, Starkad carried her away.¹ These woman-spirits are sometimes friendly, sometimes hostile, and on the whole seem to be the sublimated wise-woman whom the German revered in life for her prophetic and sacred nature, a "magnified and non-natural" Veleda of the unseen world. Such *dísir* are said to have made away with mortals,² and it is good to propitiate them with the *dísablót*. They are distinctly connected with graves and spirits of the dead, as Grimm points out from the use of such a phrase as *blóta kumla dísir*, "to sacrifice to the women of the tombs." As active in human affairs, they journey about doing help or harm; but unlike their elder sister, the implacable Wyrð, these mighty women may be pacified or cajoled with a gift. It seems to be a very old notion that mystic and supernatural women attend the birth of children and have abiding influence on the destiny of those who are born under their auspices. They are to be treated liberally, — the uninvited fairy of our story-books as a warning! Since all unseen ills come from unseen persons, as even death in battle by a visible weapon must be referred to a mysterious personality, — "if War shall take me off," says Béowulf in no abstract, modern way, — so the old German felt an impulse to propitiate or baffle the powers that did him secret harm. Anglo-Saxon literature contains some striking survivals of this cult of the mighty women. In the strange mixture of pedantry and superstition known

¹ *Herv. Saga*, apud *C. P. B.* I. 405.

² *D. M.*⁴ 333.

as *Salomon and Saturn*,¹ our Hebrew monarch describes the nature of Wyrð or fate, and gives some features which undoubtedly belonged to all the race of *dísir*. As befits a fallen deity, Wyrð has in Salomon's description pronounced diabolical traits: —

Wyrð is wrathful, she rushes upon us,
she waketh weeping, with woe she loads us,
she shoots the spirit, a spear she bears.

The last line, a sort of prolepsis for "she carries a spear and hurls it at the spirit," is especially interesting to us on account of an Anglo-Saxon charm against rheumatism or a sudden "stitch" in the side. Hovering and mysterious woman-spirits, invisible often, and horsed upon sightless couriers of the air, send little spears or javelins at the unwary mortal, just as in nobler office the Valkyrias, concealed by the swan-raiment, flew above the clash of battle and protected a favorite warrior. With the advent of Christianity they all came into equal disrepute; witness a suggestive gloss of the eighth century, — "*Eurynis*, walcyrge. *Eumenides*, hæhtisse." That is, the Furies, by *interpretatio Saxonica*, are Valkyrias; and the Eumenides are *hægtessan*, or witches. Now the charm against rheumatism distinctly names the *hægtessan* as authors of the trouble in question, and is here given in full translation:² —

"Against sudden-stitch [take] feverfew, and red nettle which grows through the house, and dock ("waybroad"): boil in butter [and say]: —

¹ Ed. J. M. Kemble.

² Original in Wülker-Grein, *Bibl. d. ags. Poesie*, I. 317; Cockayne, *Leechdoms*, III. 52 ff.

Loud were they, loud, o'er the law¹ as they rode,
 wrathful they were as they rode o'er the land :
 shield thee now, that thou mayst 'scape from the danger.
 Out, little spear, if in here thou be !

I stood under linden, 'neath light shield,
 where the Mighty Women their main² prepared,
 when they sent their screaming spears abroad.
 I will send in answer another spear,
 flying arrow forth against them.
 Out, little spear, if it in here be !

Sat smith, forged little knife,
 [angriest of iron, wondrous strong].³
 Out, little spear, if it in here be !

Six smiths sat, war-spears wrought.
 Out, spear ! be not in, spear !

If herewithin be aught of iron,
 work of witches,⁴ it shall melt !
 Wert thou shot in the fell, or wert shot in the flesh,
 or wert shot in the blood, [or wert shot in the bone]⁵
 or wert shot in the limb : be thy life never harmed !⁶

¹ "Hill" : Scottish "law."

² Strength.

³ Rieger's emendation. The original has simply "iserna wund swiðe." Sweet reads this as "wounded with iron"; *i.e.* beaten with an iron hammer.

⁴ *Hægtessan*. See above. Our "hag" is the same word, probably from "hedge," as these baneful women may lurk behind hedges and copses. Compare for the English use of the word Herrick's spirited poem "The Hag."

The hag is astride,
 This night for to ride,
 The devile and shee together,
 Through thick and through thin,
 Now out and now in,
 Though ne'er so foule be the weather.

⁵ Verse so completed by J. Grimm.

⁶ "Teased"; *i.e.* plucked, tormented.

Were it shot of the gods,¹ or shot of the elves,²
 or were't shot of the hag, — I will help thee now.
 This to heal shot of gods: this to heal shot of elves:
 this to heal shot of hag: now I will help thee.

Flee to the mountain-head!³

Whole be thou! help thee God!

Take then the knife, throw it into water.

The mythological importance of this charm is very evident. Its use in Anglo-Saxon times, with the faint touch of orthodoxy added to the last verse,

¹ *Esa*. The same root is preserved in the first syllable of Oswald, etc. The word occurring here is of great value, and shows the genuine heathendom of the charm. *Ós*, the singular, is the name of one of the runes, and has the general meaning "god."

² Etymology is here important. The word "ælf" is familiar enough in itself and as first syllable of proper names like Alfred. Another form is "oaf": see Shakspeare's "ouphes" in *Merry Wives*, IV. 4. For the facts, we have the interesting word "elf-arrow," applied in Scotland to certain stones, such as pieces of flint; also "elfbolt." These are believed to be actual missiles, such as our charm describes. Sick cattle in Norway are said to be "ælliskudt," elf-shot. This term is also Scottish; see Grimm, *D. M.*⁴ 381. Brand says that in England as well as in Scotland those relics of the stone age — arrow-heads of flint — are popularly called elf-shots, and even the *ignis-fatuus* was called elf-fire. Cattle suffer from them, and, as Brand reminds us, Collins says in his Ode: —

Then every herd by sad experience knows
 How wing'd with Fate, their elf-shot arrows fly,
 When the sick ewe her summer food foregoes,
 Or stretch'd on earth the heart-smit heifers lie.

Several diseases were named after elves: — water-elf disease, elf-hicough, and so on. Cockayne, *Leechdoms*, I. xlvi.

³ This is Sweet's reading, in Anglo-Saxon Reader,⁶ p. 123, and the simplest. Grimm reads "Flee to the mountains [she that sent the bolt]. Be thou whole in head!" In the above translation "flee" must refer to the little spear which caused the trouble; a sequel to the command "Out!" is the command "Flee!" We might of course read "fléoð" and refer to the Mighty Women. See Wülker, *Grundr. d. ags. Lit.* p. 350.

points to an older ceremonial and a more exalted station. When its temple was ruined, this rite sought shelter in the cottage, nor was it confined to England; for references to these evil-working hags are found in Scandinavian literature. In the *Hávamál* Woden tells us the tenth item of his wisdom: "If I see hedge-riders dancing in the air, I prevail so that they go astray and cannot find their own skins and their own haunts."¹ They are elsewhere called "night-riders" and "mirk-riders"; one of them is seen to ride a wolf at twilight.²

While these fashions of the mighty women bring us close to modern witchcraft, we may also look at them in their more warlike functions. Those stern old German women whom we saw among the Cimbrians and Teutons in Italy, or who, according to Tacitus, were wont in their own borders to rally a wavering line of battle, are only mortal models for the invisible beings who hover over a battle-field, help their favorites, and hinder the enemy. Such are the supernatural women mentioned in an old German spell, found by Waitz in a manuscript of the cathedral library at Merseburg, and presented with comment and translation by Jacob Grimm to the Berlin Academy of Sciences.³ The handwriting is of the early tenth century. As usual with charms and spells,—for example, the Anglo-Saxon spell just given,—we have an epic opening, three verses of description, and then the application, or spell proper, in the fourth line.

¹ *C. P. B.* I. 27.

² *Ibid.* I. 95, 146.

³ 1842. See Grimm's *Kl. Schr.* II. 1 ff.

“Once sat Women, sat hither and thither.
 Some bound bonds : some hindered the host :¹
 some unfastened the fetters.²
 ‘Spring from fetters : fly from the foe!’”³

Not so grandly supernatural as these shadowy goddesses of battle are the “balewise women” against whom the Scandinavian warrior was warned. “The sons of men need an eye of foresight wherever the fray rages, for balewise⁴ women often stand near the way, blunting swords and mind.” This blunting of weapons by witchcraft was common enough in old Germanic times. Certain runes on the blade could do it, and such a weapon was *forscrifen*; a work attributed in *Salomon and Saturn* to the agency of the devil. “On the [doomed man’s] weapon the devil writeth a mass of fatal signs, baleful letters; he ‘forscribeth’ the blade, the glory of the sword.”⁵

In this place may be mentioned the agency of “witches” in raising storms. This has become in later times a function of witchcraft and a prerogative of Laplanders; but in the old days it was an affair of greater dignity, and belonged doubtless to these same supernatural women of the night, as well as to the god of storm and wind himself. Spells were uttered

¹ Those who bind bonds are helping the victors, and make fetters for the prisoners; those who hinder the host are actively embarrassing the enemy.

² That is, the fetters of those warriors of the favored army who had been captured. Thus the first group of women are in rear of the favorite army, the second at the line of battle, the third behind the hostile army. (Scherer.)

³ This is what the women say to the prisoners, and is the efficacious word in any similar situation.

⁴ Horrible, detestable, devilish.

⁵ *S. and S.* 162 f.

against hailstorms ;¹ strange beings were appealed to for protection, and in course of time these became Christian saints.

Lastly, we come to the thinly disguised worship of ancestral spirits, which we find in the customs and myths connected with the so-called "wild hunt." Woden, the god of wind and storm, is their leader ; but the hunt itself, the rout of spirits that howl along the wintry sky, are undoubtedly the souls of the dead. The myth is universal in Germanic traditions,² and abounds in all collections of legendary and popular lore ; but the characteristic features of a hunt, the bark of dog and crack of whip, have all been added to what was originally a mere clamor of passing souls. A definite cult is hardly to be discovered ; the subject lies wholly in the province of myth and legend. We may note, however, the custom of feeding the wind, to which we have made reference above. In Carinthia, about the time of Christmas, this custom is very generally observed.³ "In Swabia, Tyrol, and the Upper Palatinate, when the storm rages, they will fling a spoonful or a handful of meal in the face of the gale, with this formula in the last-named district, 'Da Wind, hast du Mehl für dein Kind, aber aufhören musst du !'"⁴ It was not simply the spirits who were to be appeased ; the shadowy dread itself, the storm-god, was an object of cult as early — we are persuaded — as the ancestral souls themselves.

In passing from the cult of these spirits of the air, and taking up the scanty remains of such ceremonies as may have been meant for spirits of the earth, we are reminded how difficult it is to show the necessary relation between modern superstitions and an ancient worship. In the majority of cases we must content ourselves with a probability. Creatures of the underworld, who live in cave or hillside, are particularly plentiful in Norse traditions; they belong mainly to the province of mythology, but here and there we have a glimpse of systematic worship and ceremonies. Burial would naturally bring the lore of elves and dwarfs of the hillside into close connection with the traditions of the family dead. The *Kormakssaga*¹ testifies to Scandinavian worship of these dwarfs and elves. A bull was killed, its blood was sprinkled *on the hill of the elves*, and with its flesh a sacrificial feast was made in their honor. Here we are evidently not far from the funeral-mound, and the offerings set out upon ancestral graves. Grimm notes that in the Netherlands people call such hills as happen to contain burial-urns *alfenbergen*. Graves were marked by stones, and we hear a great deal in decrees of the church concerning worship at sacred stones; ² offerings were brought to these places long after the notion of direct ancestor-worship had faded away. Often there was an enclosure, as well as a stone. Anglo-Saxon laws provided a penalty for any one who should deliberately lay out such an enclosure — for purposes of the cult — “about stone or tree or well.”³ The Scandinavians sacrificed at home to

¹ See *D.M.*⁴ 370.

² For stones as sacred in themselves, see Pfannenschmid, *Erntefeste*, p. 21 ff.

³ Schmid, p. 368 (“Northumbrian Priest Law”).

these creatures. "The surly housewife," says a Norse poet, "that turned me away like a wolf, said that they were holding a Sacrifice to the Elves within her homestead."¹ This household cult of the elves was, of course, frowned upon by the church; hence the antipathy felt by all the elvish race for church-bells, holy-water, and similar belongings of a worship which was stamping out their own cult.² The elves of modern folk-lore invariably lament the good old times; people, they wail, have now begun "to count the loaves in the oven," "to make marks on the loaf," and what not. Of Elfland, the elf-queen, and all the myths of faery, we find ample account; as to the cult itself, we must be content with a general conclusion gathered from the host of more or less evident survivals. The "good people," whether elves of "mount" or "dune," are ready to help men in return for the trifling but necessary payment; their best work is that of the forge, the loom, or the oven. Weapons they will make of the best; in all sorts of household labor, such as spinning and weaving, they excel; and it is notorious that their bread and cake are unsurpassed. Moreover, they know and impart the secrets of medicinal herbs and stones of virtue. In return they often demand the aid of human beings, and particularly in three cases.³ Elf-women in travail desire the aid of a mortal nurse; when elf-men divide treasure, or fall into dispute, they often call in a wise mortal to assist them; and they often borrow a room in some man's dwelling where they may hold an elfin wedding-feast. In all these cases they give rich compensation to the mortal

¹ *C. P. B.* II. 131.

² *D. M.*⁴ 380, 401.

³ *Ibid.* 378.

in question, but instances of their mischievous and harmful nature are plentiful enough. In all probability these traditions arose with the spread of Christianity and the consequent discredit thrown upon elvish ways. Evil of their sending fell upon men and cattle; the elf-shot, as we have just seen, was justly dreaded; and spells and charms which once perhaps invoked their aid were turned against them, and intended to put them under ban. Analogous with the mass of mediæval stories which tell how men cheated the devil out of a bargain for soul or service, are the legends of troll or dwarf defrauded in similar fashion. The favorite bargain was for "heart and eyes" of a mortal if he failed to keep his pact; but if the mortal could call the troll by name, the obligation was forthwith cancelled. Such is the legend which Whittier has put into verse in his "Kallundborg Church." The oldest race of elves, however, were surely friends of man; in evidence, we may call upon those fossil-like witnesses of a vanished worship, the names of places and persons. The widespread cult of elves has left its trace in local compounds like *Ælfestûn*¹ or the more familiar personal names of *Ælfred*, *Ælfgifu* ("elf-gift"), and the like. Mingled Germanic and Celtic traditions meet us in the story of Arthur's mystic birth, as told by English Layamon. Elves take him at his birth, sing charms over him, and give him many blessings; for one of his battles an elf-smith makes him a noble coat of mail.²

¹ Leo, *Rectitud. Singul. Person.* p. 5.

² Layamon's *Brut*, ed. Madden, II. 384, 463, and Ten Brink, *Eng. Lit.* p. 238.

The dwarf-cult is not entirely a matter of ancestor-worship. In some cases a conquered race, often inferior in size to the conquerors, has been thrust into remote and desert regions, into the hills and wilds, and has thus passed into tradition as a race of dwarfs. Such a race is naturally feeble and despised in any comparisons of outright valor; but in a sort of revenge, the reputation of witchcraft and secret power of doing harm attaches to them and makes them feared. Hence the reputation of the Lapps, whom the Scandinavian Aryans conquered.¹

It was an evident piece of reasoning for the ancient world to connect the mysteries of vegetation with the benefactions of those spirits who housed below the earth. A mass of material has been collected by Wilhelm Mannhardt illustrating the ceremonies observed by European peasants in connection with seed-time and harvest.² These customs are mainly indicative of older ceremonies which had in view a helpful spirit, to whom offering was made, and a harmful demonic being which is still exorcised in varying fashion. Myths may be guessed behind many a modern legend, and find parallel in the records of Greek and Roman mythology. We shall presently find occasion to trace certain Germanic rites in their relation to the goddess of fertility and vegetation, as well as to the spirits which were more directly identified with the kindly elements themselves.

¹ Tylor, *P. C. I.* 386.

² Mannhardt, *Die Korndæmonen; Antike Wald- u. Feldkulte*, Bd. II.; *Roggenwolf u. Roggenhund*; and *Mythologische Forschungen*, a posthumous book, being No. 51 of the *Quellen u. Forschungen*.

Spirits haunted the Germanic forest, and the mysterious whisper of its foliage was their evident murmur and message to the man who could rede it.¹

Feld hath eyen, and the wood hath eres,

says Chaucer; but to older men the wood had also a tongue. Germans were children of the woods, and sacred trees abounded in their tradition. As Grimm pointed out,² and as everybody now repeats, even the Gothic cathedral has imitated in its plan the climbing and arching branches of a German forest; while the endless variety of detail easily suggests the labyrinth of twig and foliage. In speaking of the spirits of this forest, we feel sure that emigration from the human world is not to account for all of them or for their entire nature; something of the mystery and personified activity of the forest itself was in them from the beginning. The doctrine³ that trees were simply habitation of the gods, — that is to say, a sort of fetish, — is one extreme; the other is Grimm's belief that it was the actual tree which our forefathers worshipped.⁴

We have to do at present not with the sacred grove and the forest sanctuary, which are to be considered in connection with the heathen temple, but rather with the spirits of the wood. In an Anglo-Saxon glossary of the tenth or the eleventh century,⁵ "Dryades" has the gloss *wuduelfen*, wood-elves, while

¹ Again we are indebted to Mannhardt for an excellent collection of material in his *Baumkultus*, the first volume of the *Antike Wald- u. Feldkulte*.

² *D. M.* 4 56.

³ Held, for example, by Lippert.

⁴ *D. M.* 60.

⁵ Wright-Wülker, *A.-S. and O.-E. Vocabularies*, col. 189.

“Hamadryades” are *wylde elfen*, and “Castalides” *dûnelfen*, dune or hill elves. “Satyrii vel Fauni” are glossed as *unfæle men*, unclean men; but, as Wright remarks, this is probably transposed from another place, and the gloss should be *wuduwasan*; indeed, *woodwose* is given as the definition of Satyrs in a dictionary of the year 1608. Very interesting is the gloss¹ for Echo, *wudumær*, wood-mare, the being which answers folk out of the wood and has the same deceptive nature as its more violent relative, the nightmare. In all these names and glosses we see a certain similarity between classical and mediæval wood-lore; in fact, we must be on our guard when learned men of the middle ages catalogue contemporary heathen practices. A just decision is often difficult. Thus in the list taken by Grimm² from Burchard of Worms, mention is made of certain “*agrestes feminæ quas silvaticas vocant*,”³ women of the wood who appear and vanish and oft times accept a mortal lover. Here classical parentage seems an easy inference; yet we must bear in mind what a store of similar notions inform later and even modern folk-lore. From our oldest myths down to these peasant stories of to-day, the wood is peopled with mystic beings, mainly women. Classification of these belongs of course elsewhere;⁴ here it is our task to trace their cult. Not very much importance may be put upon the “weird lady of the woods” whom Grimm mentions⁵ as named in a poem — he gives no title — in Percy’s *Reliques*. It is “The Birth of St. George,” where the weird lady

¹ W.-W. col. 391.

² *D. M.*⁴ III. 404 ff.

³ *Ibid.* 409.

⁴ *Ibid.* 357 ff.

⁵ *Ibid.* 337.

from her cave, which is described as a most uncanny place, prophesies the future of Lord Albert's unborn child; she is sought for advice, is able to foretell the future, and is in touch with a deal of supernatural machinery. Like the water-women, the ladies of the wood have the old sibyl nature; and Grimm reminds us that Veleda herself dwelt amid the forest. So we approach ancestor-worship, and are made to think of the "women of the tomb"; indeed, one reading of a passage already quoted,¹ makes disguised Odin learn his wisdom from the "old people who live in the forests," where other texts read "graves." Related, in like manner, to ancestor-worship is the household cult of a spirit who dwells in some tree near the family dwelling and feels a peculiar interest in the welfare of the race. By Swedish folk-lore, one must not only abstain from cutting or breaking the tree itself,—on penalty of the spirit's departure, and with him all luck of the house,—but also there must be no hacking or spinning on a Thursday evening, for this is offensive to the dweller in the tree.²

Definite worship of trees is still to be found in survival, and was distinctly forbidden in decrees of the church. It is one of the points of "heathenship," as defined in the laws of King Cnut: "Heathenship is where one worships idols, that is, where one worships heathen gods and sun or moon, fire or flood, water-wells or stones, or any sort of tree."³ The Anglo-Saxon homilies repeatedly condemn the practice of people "who are so foolish" as to bring offer-

¹ Above, p. 351.

² *D. M.*⁴ 421. The "family-tree" has with us another meaning, but the metaphor is suggestive. See *D. M.*⁴ III. 187.

³ Schmid, p. 272.

ings to a mere stone, a well, a tree. Wells, stones, and trees were holy places; water-spirits, earth-spirits, and tree-spirits had prescribed and traditional rites which the church found hard to destroy. In the list quoted by Grimm, from Burchard, we find specific mention of these practices, — bringing votive offerings to tree or fount or stone, bringing a *candle* thither, or any such gift, “as if there were a divinity (*numen*) there which could do good or harm.” Again, bishops and their assistants are to make every exertion that “such *trees as are consecrated to demons* and worshipped by the people, to such an extent that no one dares to cut off branch or twig, should be hewn down and burned.” Mention is further made of auguries and the casting of lots, which are undertaken under the shade of a sacred tree.¹ A modern instance of offerings made at or to a tree is quoted by Mr. Tylor,² from a Scandinavian authority, who says that to this day on outlying Swedish farms is observed the sacrificial rite of pouring milk and beer over the roots of trees. Tylor collects ample evidence of similar tree-cult among savage tribes.³ Mannhardt has a volume devoted to the Germanic phases of the subject. Anglo-Saxon leanings towards utility are plain enough, along with traces of absolute worship, in the custom of “youling” trees which are to bear fruit and so benefit the worshipper directly; the tree is often whipped, or, again, has cider, beer, or the like, poured upon its roots.

The sacred character of trees is shown by their use in the naming of places such as *Lindentûn*, *Thorntûn*,

¹ *D. M.*⁴ III. 404, 406.

² *P. C.* II. 228.

³ II. 215, 221 ff. See his references.

and many similar names.¹ Moreover, sacred trees were used as boundary marks for an estate, as is proved by our old charters and legal documents. A given tree, hung with trophies offered to god or spirit, would be known long after the heathen abominations had been removed; marks and carvings were often allowed to remain upon it. Thus Kemble² thinks that the *earnas béam* in Kent, mentioned in an old document, was probably "a tree marked with the figure of an eagle." A full description of heathen rites practised at such a tree is quoted by Grimm from the life of St. Barbatus (602-683),³ with the somewhat damaging remark that "it may be accurate." The Lombards had been baptized, but still held to heathenish customs; and not far from the walls of Beneventum, they were in the habit of worshipping a "sacrilegious" tree, in which was hung the hide of a beast. The men rode a race under the tree, during which they hurled spears through the hide; and this had to be done backwards, making the affair a feat of strength and dexterity. The piece of skin thus cut out was eaten as an especial part of the rite. Here, moreover, persons were wont to fulfil vows, and the whole place was held sacred. We are elsewhere distinctly told that the Lombards worshipped a "blood-tree" or "sacred tree."⁴

¹ Leo, *Rectitud. Singul. Person.* p. 14.

² *Saxons in England*, I. 480 (appendix).

³ *D. M.*⁴ 541. A good survival of tree-worship is the case of the *Stock am Eisen* in Vienna, into which every apprentice, before setting out on his *Wanderjahre*, drove a nail for luck. "For luck" is generally what is left of the older notion of divine aid. See Fergusson, *Tree and Serpent Worship*, p. 21.

⁴ *D. M.*⁴ 83.

First of trees in point of sacred character stood the oak. We remember, of course, Glasgerion's oath, "by oak and ash and thorn," where, in original rites, the sacred tree in question was touched by him who swore.¹ The village May-pole must be no more than mentioned, and even the great world-tree, Yggdrasill, may be left to controversy with a general feeling that between heathendom and Christianity, neither one can be claimed for its origin to the exclusion of the other;² in any event, we see a support for the supreme importance of tree-cult. Whether we be justified or not in assuming a Germanic "world-tree," there is no doubt of the old Germanic association of trees with the source of existence. About the guardian-tree Swedish women twine their arms in order to insure easy delivery in the pangs of childbirth;³ and we remember how in our English ballads women in like time of need "set their backs against an oak." Other trees are noted as affording help in like circumstances. Eating the fruit of certain trees may make women pregnant; and when May Margret pulls the nuts in Hind Etin's wood, plainly a sacred region, and so comes into his power, we may perhaps assume a kindred tradition based upon older cult.⁴ Indeed, in many a tale, the babies are fetched directly from or out of this or that tree;⁵ and we hear of children being drawn through a split sapling in order to cure them of a deformity or a disease. It is in close connection with the use of trees as a place of offering and sacrifice that courts were so often held beneath a

tree;¹ justice was originally divine in every sense. It is significant that in one of these courts "the oath was taken with a stick of holly held in the hand."² Down to modern times, certain traditional trees are held in awe, and the rudest village hind will not break or mar them.³

Our best account of such a sacred tree in the old heathen days is the well-known story of Boniface and the "oak of Jove." It is told in Willibald's life of the saint.⁴ He had come to the land of the Hessians, and many of these accepted the laying-on of hands; "but others, whose minds were not yet strengthened (*nondum animo confortati*), refused to accept the truths of the pure faith; some, moreover, made in secret their offerings and sacrifice, . . . others openly; some publicly, some privately, carried on auspices and divinations, magic and incantations; others again auspices and auguries and divers sacrificial rites; but others, of saner mind, who had renounced all heathen worship, did none of these things. With help and counsel of these latter, [Boniface] undertook, with the servants of God standing about him, to cut down an immense oak-tree, which was called by its old heathen name, the Jupiter Oak (*robur Jovis*),⁵ in a place known as Gæsmere.⁶ When, resolute of mind, he had begun to fell the tree, the great crowd of heathen who had come up cursed him as an enemy of their gods; but

⁶ Geismar on the Edder.

nevertheless, when he had cut the tree only a little, the huge mass of the oak, moved by a divine blast from above, fell with shattered top ; and as if by command of a higher power, burst asunder into four parts, and four equal fragments of huge bulk lay revealed without any effort of the brothers who stood round about." With the wood of this oak, Boniface built a church.

Spirits of the water are plentiful in Germanic mythology, and had a special cult which survived into modern superstition. Plutarch, in his "Cæsar," has an interesting and valuable passage which not only shows us the prophetic functions of the German woman, but gives us positive evidence of Germanic religious ceremonies in their primitive form. When Cæsar suddenly appeared with his soldiers before the army of Ariovistus, the barbarian host was in consternation. "They were still more discouraged by the prophecies of their holy women, who foretell the future by observing the eddies of rivers, and taking signs from the windings and noise of streams, and who now warned them not to engage before the next new moon appeared." ¹ J. Grimm explains the divination from an eddy or whirlpool by the theory that such movements were caused by the spirits who dwelt in the water.² Besides this official divination, from the murmur and windings of the watercourses, there was direct worship of the spirits who haunted spring and fountain. True, we are told that it was worship *at* the fountain, *at* the stream ; and many modern writers insist that these were simply hallowed places meet for the worship of the dead. But fountains, like trees, with

¹ Clough's Plutarch, IV. 276 [Boston ed. of 1859]. ² *D. M.*⁴ 492.

all the mystery of rippling living waters, or the life-like murmur of foliage, were very different places from the dull stone above a grave; and much of the worship must have been directed to the informing and potent spirit of the place, to a personality which neither stood out from its haunt as a distinct ancestral soul, nor yet merged entirely in the element; it was an animating presence, holding border-ground between individuality and a vaguely felt natural power.

Water-worship is almost universal, found in every place and time, from the river-god of classical lore down to the sacred well of the superstitious European peasant.¹ Worship at springs and wells, as we have seen, is repeatedly forbidden in the canons; Anglo-Saxon decrees forbid the bringing of candle or offering to these once sacred places, and prayers and vigils at the fountain are likewise put under ban.² The same holds good of all Germanic races. For the Scandinavians we have testimony of Ari. "Thorstan Rednebb was a great sacrificer; he worshipped the waterfall . . . and used to have all the leavings taken to the waterfall; he was a great prophet."³ So Gregory of Tours tells about offerings and sacrifices made by the people to a certain lake;⁴ cheese was one of the offerings, and this reminds us of the "Cheesewell" of our own traditions, which had its name from the same custom. Belief in the curative property of certain holy wells is common enough down to the present time; a heathen well of repute easily turned Christian with the country, took a saint as patron, and went on curing and blessing as before.

² *D. M.* 484 ff.

³ *C. P. B.* I. 421, quoted from *Landn.* V. 5.

⁴ *D. M.* 496.

Tales of such are abundant; one well in England is celebrated by Roger of Hoveden as making the blind see, the deaf hear, the dumb talk, and the lame receive power of limb. A woman far gone in dropsy went to this well by advice of an abbot, drank, and vomited two huge black toads, which changed into immense dogs of the same color and then into asses. They were driven off, and the woman recovered her health.¹ Strip away the monkish wrappings, and we have the virtue of a good old heathen well. The dualism which was partly original and partly owing to the discredit of heathen worship, shows us another sort of cult in this domain; for evil and malicious spirits haunted the water, and worked endless mischief among the sons of men. Now magic, a very old affair, could be put into operation against these evil powers, or else they might be propitiated by a sacrifice of some sort. Cases of the latter method we shall presently consider; the former is illustrated by the custom of throwing metallic objects, preferably of iron or steel, into the well or the stream, and thus binding or paralyzing the power of the water-spirit. Iron and steel were supposed to limit spiritual agencies; and here, says Liebrecht, is the real explanation of our maxim that lovers or friends should not make mutual presents of knife or scissors or anything of the sort.² Cornish folk, says Tylor, drop pins and nails into their holy wells.³ All manner of curious customs were associated with the search for cure or blessing at these holy wells, and some are collected by Brand.⁴

¹ Liebrecht, *Otia Imperialia of Gerv. Tilb.* p. 103.

² *Otia Imp.* p. 101.

³ *P. C.* II. 214.

⁴ *Antiquities*, "Customs and Superstitions concerning Wells and Fountains."

Divination was practised, as where people dropped pebbles into the water, or provoked the rising of bubbles, and interpreted the signs according to a traditional code. More direct was the usage at the "wishing-well," where the supplicant threw into the water a piece of gold and then made his prayer. Fountains were known to foretell plague or famine, or, in less sweeping fashion, the approach of a tempest. Wells were decorated with flowers; in one English village, on a certain day, the clergyman and choristers were wont "to pray and sing psalms at the wells."

The notion of "healing springs" is, of course, no vulgar superstition. From oldest times the virtues of certain waters must have been known; and with our Germanic forefathers the salt-springs had precedence, and were brought into close connection with the cult. The famous passage of Tacitus,¹ which tells how two Germanic tribes struggled for such a dear possession, also informs us that these Germans believed the place itself to be of unusual sanctity, and thought the salt was produced by the direct and gracious intervention of the divinities. When water was thrown upon burning logs, the rude method employed to make the salt, that precious substance was produced by divine agency from these opposing elements of fire and water.

The purifying functions of water bring it into connection with a great variety of ceremonies. Lustration is found in all directions.² Sacred rivers meet us in every land, and every village has its haunted brook or spring. The rain itself is holy, and when it

¹ *Ann.* XIII. 57.

² Tylor, *P. C.* II. 429 ff.

falls into an open grave, it is a sign that the soul of the dead is already among the blessed;¹ it is God's benediction. "In olden time," begins the first Helgi-Lay, "in olden time when eagles were calling on high, and *holy streams* poured down from the heights of heaven. . . ." In stress of drought men sought by magic to bring down the rain, and the church condemns those "qui mergunt imagines in aquam pro pluvia obtinenda."² Holy-water itself is a concession of the church to the old well and fountain worship; but whether, as many have claimed, baptism and the use of water in sprinkling and purifying were known to heathen custom, is a disputed point. Mention is made of them in Old Norse annals; but while Müllenhoff defends their heathen origin, Maurer thinks they were imitated from the rites of the church, and has secured for his theory the emphatic approval of Bugge.³ But even if the rite of sprinkling was taken from the church, a custom of dipping or otherwise bathing new-born children in running water, which prevailed among the ancient Germans, was surely more than a mere "bath," and had ritual significance. Moreover, when we find this saying of Odin's: "If I pour water upon the young thane, he falls not, though he go to battle; he sinks not under the sword,"⁴ even if we admit the influence of bap-

⁴ Bugge, p. 376 f.

tismal rites, we must suppose something in the old heathen ceremonial to which this act bore some resemblance. Running water seems to have had special virtue. We may work backwards from Tam o' Shanter and his Meg to the leechdoms of Anglo-Saxon folk-lore, surely full of heathen reminiscence, where we find as cure for erysipelas on man or horse, a charm, to be sung over the man's head or in the horse's left ear, in running water, and with the head against the stream.¹ In Norway and Sweden, land of cataracts, the virtues of running water would naturally find ample recognition. The spirit who haunts the waterfall is helpful or harmful, and can be cajoled into imparting valuable knowledge, or else must be propitiated by sacrifice to avert the consequences of his ill-favor. He has power to teach men music and magic, and Henrik Ibsen's poem, *Spillemeend*, will occur to lovers of modern Scandinavian literature. We have already heard from Ari of a man who was careful to sacrifice to the cataract. This was for general prosperity; but particularly the art of music is best learned from such a master. To learn to play the harp, says Swedish folk-lore, offer a black lamb to the spirit of the waterfall; while in Norway, the Fossegrim teaches one to play the fiddle. He grasps the learner's right hand and sways it about so long that blood starts from every finger-tip; after that, one can play so that the very trees will dance. Finer yet is the touch of blended old and new belief in the folk's tradition that Nix would gladly purchase im-

¹ Cockayne, III. 70. For "wens at the heart" there is a similar charm, III. 75.

mortality and salvation by thus teaching the Christian how to play the violin.¹

Loveliest of all water-spirits, and brought into manifold touch with old and later cult, are the swan-maidens. One of the finest passages of the Nibelungen Lay is where Hagen surprises these wise women of the flood, and forces them to uncover the secrets of the future. Here it is not the mortal watching from the bank who foretells things to come as he watches the ripples of the stream; it is the creatures of the flood itself.

Both up and down the river he sought the ferryman;²
 He heard the plash of water: to listen he began.
 'Twas wise-women who caused it; all in a fountain fair
 They made them fain to dally and cool and bathe them there.

When Hagen had espied them, he stole in silence near,
 And when they marked his coming, right mickle was their fear:
 That they outran, escaped him, them seemed a mighty joy:
 The hero took their garments, nor made them more annoy.

Spake one of the mere-women, — Hadburg was her name, —
 “Here will we tell you, Hagen, O noble knight of fame,
 If you now, gallant swordsman, our raiment but restore,
 Your journey into Hunland, and all that waits you more.”

*Like birds they swept and hovered before him on the flood,
 Wherefore him seemed their wisdom must mickle be and good. . . .*

She said: “To Etzel’s kingdom ye do right well to fare;
 Be witness my assurance of all I now declare:
 To no realm ever heroes have better ta’en their way,
 To such a noble welcome! — Believe me what I say.”

¹ *D. M.*⁴ 408; Matthew Arnold’s poem *Neckan*. Deadly water-spirits are plentiful, but the catalogue belongs to mythology. The *Nicor* is Anglo-Saxon ancestor of “Nick.”

² To convey the Burgundians over the river.

Her words were good to Hagen and made his spirit glad.
 He gave them back their raiment. No sooner were they clad
 In all their magic garments, they made him understand
 In truth the fate that waited his ride to Etzel's land.

It was the second mere-wife, Sigelind, who spake :
 " O son of Aldriane, Hagen, my warning take !
 'Twas yearning for the raiment my sister's falsehood made ;
 And if thou goest to Hunland, Lord Hagen, thou'rt betrayed ! " ¹

Hereupon they tell him the true fate of the expedition. An army of similar water-spirits with prophetic powers could be marshalled from oldest times down to Scott's " White Lady " in the *Monastery*.

Whatever may be said of these mild types of water-cult, there is no doubt in regard to the worship of spirits which rule over flood and tempest. Our own ancestors who dwelt by the North Sea, and their neighbors the Danes, knew this cult. Sometimes the evil spirit was propitiated with a sacrifice ; sometimes a god of light and cheer was appealed to and made to conquer the demon. Such is the fate of Grendel in our *Béowulf* ; and it is significant that an English local name, *Grendlesmere*, has preserved a distinct piece of testimony to the spirit and his cult.² Folklore tells many a tale to illustrate the other method. A legend of the Danish coast runs as follows :³ On the west coast of Jylland it is said that the sea will have his yearly sacrifice in return for not breaking in upon the country ; and that therefore in the old times people had a custom of exposing every year a little child in a barrel, since otherwise, oftener than not,

¹ *N. L.* 1473 ff.

² Document of Æthelstan's time (931) in *Cod. Dip.* II. 72.

³ Thiele, *Danmarks Folkesagn*, II. 3.

there followed great ruin and destruction.¹ A milder rite was the yearly bath of the women of Cologne on the eve of St. John, by which they sought to avoid evil and bad luck for the coming year; it seems to have been a real Rhine-cult, and aroused great interest in the poet Petrarch, who saw it in the year 1330 and described it in a letter to a friend.² Finally, we come to the victim seized by the nix, or anticipated by sacrifice of some beast; folk-lore is full of these tragedies, and the legends about the water-spirits fill volumes. Nix is mostly cruel and vindictive. Often he appears as a black horse or a bull, climbing from stream or lake to carry off his victim; what is no longer given he must take. Here, too, belong the rites at the opening of a bridge, — a live cock built into the wall in lieu of the victim, and so shading back into human sacrifice. The bather seized by cramp or caught in an eddy of the stream, believes that he is pulled down by a demon of the flood. To-day we have a dozen superstitions about bather's cramp; one wears an amulet, or even goes through some absurd performance to ward off the danger.³

Dwarfs have been mentioned; we must not forget the giants. While these are mostly represented as foes of man and hated by the gods, the nimble and keen-witted divinities of a new order of things, while they are held up to ridicule as a heavy race, dull as the stones of their native mountains, none the less we may discover probable traces⁴ of a cult directed to these same stupidities. Offerings to giants occur

¹ See also "Odense Aamand's Offer," II. 17. ² *D. M.*⁴ 489.

³ Details in Tylor, *P. C.* II. 209 ff.

⁴ "Kaum Spuren," says, however, J. Grimm, *D. M.*⁴ 461.

in legend and superstition. Like Milton's "lubbar fiend," such a being will plough and thresh and do other services for men, in order "to earn his cream-bowl duly set." In the *Kormakssaga* occurs the word *blótrisi*, "giant to whom one makes sacrifice"; but Vigfusson in his Dictionary defines it "an enchanted champion," with a mark of doubt. Stones smeared with butter may have been, as Grimm remarks, a compliment to the giants. Worship at the huge stone tombs, believed to be the sepulchres of a giant race, must have been in a manner worship of the giant-spirits which haunted the place. The old homilies explain the heathen gods as "giants," and "men who were very mighty."¹ Certain gods are called directly giants, — "Mercury the giant."

Such ceremonies as we have hitherto described were of an intimate and personal character, and limited to a narrow round of domestic life; but we must now broaden our view, and, first of all, in addition to the cult of spirits who dwelt in the different elements, and at bidding would take human form and appear to the mortal who knew the way to summon them, we must admit a direct worship of the elements themselves. It was a vague personality which seemed in the storm-wind to prostrate the giant oak and hew a path through the forest, but it was a personality none the less. Human power could never compass such destruction, and the ancestral spirits were out of the question; with the evidence of earliest language, and a careful study of modern savage reasoning, we come to the assurance that our remote forefathers must have worshipped from the

¹ Kemble, *Salomon and Saturn*, p. 120 ff.

outset the animated forces of nature. These were spoken of as persons, and in most cases were regular divinities, — a heaven-god, a thunder-god, a wind-god. Before, however, we approach the cult of these deities, we must trace the more direct worship of the elements.

Cæsar says¹ of the Germans that they have no gods save those whom their perceptions reveal to them and by whose agency they have material profit, such as Sun, Moon, and Fire: “Solem et Vulcanum et Lunam.” Cæsar was undoubtedly wrong² in his limitation; but his positive testimony is of value. He shows a tendency of the Germans to worship deities which were intimately connected with powers of nature, as well as the Germanic veneration for these powers in and for themselves. Let us take for the first an element which Cæsar does not name, — water. We have already seen how fain our ancestors were to worship at wells and springs, and how wide was the power of healing which they attributed to the agency of any sacred fountain. But the element itself was held in highest veneration, and this is particularly manifest in the old leechdoms. “Let the woman,” runs an Anglo-Saxon specimen,³ “who cannot bring forth [or feed, nourish?] her child, take in her hand milk from a cow of one color, and then sup it with her mouth, and then go to running water and dip up with the same hand a mouthful of the water and swallow it: then let her speak these words. . . .” How to get the water is more important than its source: — at midnight or before dawn, in absolute

¹ *B. G.* VI. 21.

² *D. M.* 85.

³ Wülker-Grein, *Bibl.* I. 327; Cockayne, III. 69.

silence, with one's hand scooping up the water against or with the stream and turning towards the east, taking the water from three separate brooks, and what not.¹ Celtic water-worship was pronounced; in a certain well a broken sword is made whole, and "the spring that turneth wood to stone," mentioned by the king to Laertes in *Hamlet*, had doubtless something more than chemical traditions.²

Fire in many ways resembles water;³ it is full of motion, capricious, serviceable, destructive. Tylor divides fire-cult into two varieties, — worship of the actual flame before the devotee, and worship of any fire as manifestation of the fire-god.⁴ While the orient is the peculiar home of this cult, we find ample evidence of it among the races of Europe; Slavonic tribes are perhaps most prominent. The fire upon the hearth is of course the centre of all domestic ceremony of the sort; brides on entering their new home were once led about the hearth, then central in the hall; and nowadays an Esthonian bride throws money into the flames, or else a live offering, such as a chicken.⁵ A devouring and greedy monster, fire is appeased by such gifts and does not fall upon house or barn. Worship of fire is forbidden in the Anglo-Saxon laws and decrees. Cnut's definition of heathendom included the cult of "sun and moon, fire and flood-water," but Grimm can find little else to testify to a regular cult of fire among the Germans. Probably it was a prevailing sentiment rather than a special cult. There is a certain gratitude for the

³ Etymology helps us with our English *burn* and German *Bronnen*.

⁴ *P. C.* II. 277 ff.

⁵ *Ibid.* II. 285; *D. M.* 501.

benefits of fire, natural to inhabitants of a cold country, as where the Edda, in different mood from Pin-dar's, says that fire is the best thing for mortals;¹ while in the cosmogony of the Scandinavian myths the same element plays a great part in the bringing forth of life. The assumption that primitive Germanic faith looked forward to a great fire which should end the world, — that from Muspellsheim came the creative warmth, and thence also shall come the element of universal destruction, — is not now held by all mythologists. It is disputed by Bugge,² who refers to Christian influences this whole notion of the end of the world; and he is joined by other authorities.³

The survivals mostly show us fire as object of worship on account of its purifying and healing properties, — a desperate but potent cure. In the Mark of Brandenburg we find traces of what was doubtless, in old times, a far more terrible rite. Until lately, peasants of that neighborhood were wont to meet sickness in swine by driving them through a fire, made under the most careful conditions, by the friction of a rope, or similar device. In other places, and under the same circumstances, a similar sacred fire is prepared; all other fires in the village being meanwhile extinguished, and swine, cattle, poultry even, are driven through the healing flame.⁴ We could collect a number of similar survivals in which fire plays this purifying and healing part.⁵ It is sig-

¹ *D. M.* 500.

² *Studier*, p. 419 f.

³ Meyer, *Völuspa*, p. 182, says that this Norse and sporadically German doctrine of the world's end "has not been proved to be primitive German belief."

⁴ *D. M.* 503 f.

⁵ The smoke of these fires is beneficent. If it passed over and through the branches of fruit trees, it ensured a heavy crop.

nificant — one thinks of the Roman custom — that in many of these village rites only persons of a pure life are allowed to take a leading part; and the favorite fashion of kindling the so-called *neid-fire*,¹ by the rubbing of sticks, could be matched by similar restrictions in rites of other races. A double sanctity must have informed the ceremony when the “neid-fire” was used to heat water, which one proceeded to sprinkle over cattle afflicted with the murrain.² Fire played a great part in the midsummer festivals of the heathen; and held through later times, as at Easter, or at St. John’s day, when great fires were lighted on the mountains and hilltops, and the whole country-side seemed to be ablaze. Around these fires the people danced and sported, jumped over and through the flames, and thus kept up in traditional forms of merry-making the old severities of their forefathers’ cult. A rude sort of divination was practised with this aid. Wheels bound with straw, and so set on fire, were rolled down the hillside, into the river below; if the fire held till it touched the water, a good vintage was foretold that year.³ Elsewhere the wheel takes away all ill-luck from the people of the village.⁴ We hear of all manner of fires at this season; “made of bones,” one sort, — the modern bon-fire, according to a half-parlous etymology;⁵ fire of “clean wood”; fire of wood and bones

¹ This form is Scotch. The German form is much older. It is mentioned in 742, and forbidden as a heathen rite, — “illos sacrilegos ignes.” The *Indiculus* speaks, “de igne fricato de ligno, id est, nod-fyr.” *D. M.* 502. See Mannhardt, *Baumk.* p. 518 ff.

² *D. M.* 507.

³ *Ibid.* 514 ff.

⁴ Brand, *Antiquities*, “Summer Solstice.”

⁵ Skeat, *Dict.*, and Brand as quoted above.

mixed. Mention is made in an obscure poem quoted by Brand, but charged with classical allusions, of the habit of "*casting mylk* to the Bonefyre." Farmers were wont to go around their cornfields with burning torches;¹ and in every way a superfluity of heat and light seems to have been in order. At the opposite season of the year, the winter solstice, we find fire in the same popularity, — witness the Yule Log and its train of ceremonies. It is hard, however, in this case to disentangle the ceremonial from the practical uses of fire. Michaelmas, too, had its fires; then, as in midsummer, blazed the torch, and the straw-covered wheel rolled down the hillside with a crowd of torch-bearers rushing after it; by the brook, the goal of the wild chase, peasant-girls waited for the runners, and gave them cakes and wine, as prologue to the dance. Many of these rites survived, even into our century, and are beyond all reasonable doubt relics of heathen ceremony.² A little later than Michaelmas, on St. Martin's day, fires blazed in even more persistent fashion; torches were borne about, fields and orchards were visited, and in many places, baskets of grain or fruit were cast directly into the flames, — an evident sacrifice.³

In short, not to multiply examples of this sort, still less, to lose ourselves in speculations about symbols, it is evident that fire survives in all these ceremonies partly as a once universal means of worship offered to various powers, and partly as an ele-

¹ In one German village the burning wheel of St. John's eve is called the "Hail-Wheel," and Pfannenschmid (*Erntefeste*, pp. 67, 384; Mannhardt, *Baumk.* p. 500) concludes that the rite was meant to defend crops from the ravages of hail.

² Pfannenschmid, *Erntefeste*, pp. 117, 491.

³ *Ibid.* 210 ff.

ment which found its own cult among people who wished its beneficence and feared its dangers, — recognizing it doubtless as the most important factor ever added to the progress of civilization. But even in fire-worship we cannot fail to find the trace of manes-cult. The soul was fancied as flame, and about the dead man's barrow hovered an uncanny fire. As usual, the popular belief is perverted into superstition of wiser ages, and only the evil and grosser souls suffer this fiery imprisonment. Such are the dismal lights of the churchyard.

Direct cult of the wind is not illogical; for the storm has its terrors to be averted, and milder breezes bring clouds and fertilizing rain. Feeding the wind is a rite which we have already noticed; Tylor quotes a charm from New Zealand, where, however, the element seems to be personified.¹ The air, like water and fire, is a purifying agent; but it is hard to tell what logic of ceremony survives in the odd notion of a Danish huntsman that to obtain charmed bullets and sure aim (*frit skud*) he must let the wind of a Thursday morning blow into his gun-barrel. Thiele says it means a pact with the Wild Huntsman, who is ruler of the air.² Superstition has much to say about witches who can raise the wind, cause storms, and the like. This is black magic; but more legitimate are the ceremonies, once part of a cult, now mostly broken and silly remnants, which avert the harmful agency of storm and flood and hail. These ceremonies were either public or private, and, judging by the survivals,³ of the most

¹ *P. C.* II. 378.

² Thiele, *Danmarks Folkesagn*, II. 112.

³ A list of these, too long to quote, in Pfannenschmid, *Erntefeste*, p. 373 f.

varied character. Direct testimony of our heathen ancestors' doings in this particular cult is given by a decree of Charlemagne against the custom of "baptizing" bells to act as prevention of the hail, or of writing upon cards and attaching the latter to poles set up in the fields. The "runes" were undoubtedly forbidden because of their heathenish nature; for we read of a case where a bishop took a piece of wax from the grave of a saint, fastened it to one of the highest trees, and so drove away the hailstorms that had before laid waste his fields.¹

As to the earth, the "mother" of so many myths, we shall have difficulty in separating any direct cult from the worship of an earth-goddess. A long charm of Anglo-Saxon origin² contains amid a mass of clerical superstition a few fragments of older heathenism. It runs as follows: "Here is the remedy how thou canst remedy thy fields if they will not bear well, or if any improper thing is done thereupon in the way of magic, or of bewitching by drugs. Take thou by night, before daybreak, four pieces of turf on the four sides of the land, and note how they previously stood. Take then oil and honey and barm and milk of all cattle that may be on the land, and part of every kind of tree that may grow on the land except hard trees,³ and part of every known herb except burdock⁴ alone, and put holy water thereon, and drop thrice on the place of

the pieces of turf, and say then these words: ‘*Crescite, wax, et multiplicamini, and multiply, et replete, and fill, terram, this earth. In nomine patris et filii et spiritus sancti sint¹ benedicti.*’ And *Pater Noster* as often as the other. And then take the turves to church, and let the mass-priest sing four masses over the turves and let the green part be turned towards the altar, and afterwards, before sunset, take back the turves thither where they were. And have wrought of live tree four signs² of Christ and write, on each end, Matthew and Mark, Luke and John. Lay the sign of Christ on the bottom of the pit and then say: *CruX Mattheus, cruX Marcus, cruX Lucas, cruX sanctus Johannes.* Take then the turves and set them there above, and say then nine times these words: *Crescite* and as often *Pater Noster*, and turn thee then eastward, and bow nine times humbly and say these words: —

“ Eastward I stand, I ask for my welfare,
 ask I the Mighty Lord, ask I the Mickle God,
 ask I the holy Heavenly Warder, —
 Earth I ask and Up-Heaven³
 and the sooth Sancta Maria
 and heaven’s might and high palace,⁴
 that I this charm by the Chieftain’s⁵ gift,
 may open with⁶ teeth in earnest mind,
 waken these fruits for our worldly use,
 till these fields with firm belief,
 make splendid this turf, — as spake the prophet,
 that he speeds on earth who alms divideth,
 well and willingly by will of God.

¹ *Sitis?* Wülker.

² Crosses.

³ Cf. O. H. G. *ufhimil.*

⁴ *Reced* = house, but in Epinal Gloss (Sweet’s *O. E. Texts*, p. 83), *ræcedlic* = palatina, “palatial.”

⁵ *Dryhten*, “leader” = God.

⁶ Or “from”; as much as “speak,” like the Homeric figure.

“Turn thee then thrice, with the course of the sun, stretch thee then at full length, and say these litanies, and then say *Sanctus, Sanctus, Sanctus*, to the end. Sing then *Benedicite* with outstretched arms, and *Magnificat* and *Pater Noster* thrice, and commit it to the praise and glory of Christ and Sancta Maria, and the Holy Rood and the profit of him who owns thy land and all those that are placed under him. When all this is done, then let unknown seed be taken from beggars, and let there be given to these twice as much as one takes from them, and gather together all the ploughing utensils; then bore in the plowtree and [place in the hole] incense and fennel and hallowed soap and hallowed salt. Take then the seed, set it in the body of the plow, and say:—

“Erce, Erce, Erce, earth’s mother,¹
 grant thee the Almighty, Master Eternal,
 acres waxing and waving in bloom,
 big with increase, brave to see,
 store of stalks, standing corn,²
 broad-leaved barley’s bountiful fruit,
 eke the white of the wheat in plenty,
 and likewise all the earth’s abundance.
 Grant to him, God eternal,
 and his holy saints which in heaven be,
 that his earth be defended from every foe,
 be safe from every ill and drug
 thrown by magic athwart the land!
 Now bid I the Wielder, this world who made,
 no woman so word-strong,³ no man be so mighty,
 to turn away these words here said!

¹ Cockayne makes *eorþan* a locative.

² A desperate translation of a difficult line. Readings differ, and the text is corrupt.

³ We notice throughout the charm that chief fear is of women and also chief hope of aid from women,—“mother of earth,” or “mother earth,” as the case may be.

“Then drive the plow and make the first furrow.
Say then:—

“Hail to thee, Earth, all men’s mother,
be thou growing in God’s protection,
filled with food for feeding of men!

“Take then meal of every kind and bake a loaf, ‘as big as will lie within his two hands,’¹ and knead it with milk and with holy-water, and lay it under the first furrow. Say then:—

“Full field of food for folk of men,
brightly blooming, blessed be thou,
in the name of the holy one, heaven’s maker,
and earth’s also, whereon we live;
God, world-maker, grant growing gifts,
that all our corn may come to our use!

Say then thrice *Crescite in nomine patris, sint benedicti. Amen* and *Pater Noster* thrice.”²

The value of this charm is evident; for all the expenditure of clerical forms of benediction, there is plenty of the old heathen rite left in full view. Who “Erce” may be is question for the mythologists;³ but her title as “mother of earth” (or mother earth?) gives us sufficient standing-ground in the matter of cult.⁴ As Grimm remarks, earth itself was “holy,” and by simple logic any familiar spot of earth had its sacred character. Whoso abode long time away from his land, kissed the earth by way of greeting on his return; while Brutus, in the legend, took the wider

¹ Cockayne. ² For a few kindred rites, see Grimm, *D. M.* 1035 f.

³ For which consult the passages noted by Wülker in his *Grundriss*, p. 349.

⁴ Myths exist in plenty. See Tylor, *P. C. I.* 326 f.

view of his relation.¹ To die was, according to Scandinavian phrase, "falling to mother earth." Turf cut with its grass fresh upon it plays an important part in the charm just given; and it is perhaps not too fanciful to see in the ceremony of entering upon blood-brotherhood,² an assumption of common maternity on the part of the earth in which the two streams of blood flow together. Creeping under the raised sod was also part of various rites;³ and oaths were made, as by holy trees, so also by turf and grass.

Partly in honor of the gods and goddesses of fertility, partly in honor of the sacred earth herself, were the manifold processions and ceremonies in field and garden. In the tenth century we find a German abbess establishing certain ceremonies which are to take the place of the former "heathen processions about the fields."⁴ This was at Whitsuntide; there was to be watching through the night, a solemn procession at morning, and relics were to be borne about the fields. From these substitutions we can in some measure divine the heathen rites. Offerings and feast were in a manner continued, and survive to this day in some parts of Germany as a general feeding of the poor of the parish, often in the churchyard itself. In other places we hear of games and sport, which are forbidden by the synods;⁵ but in countless villages of the Continent, as well as in England, the chief elements of these solemn processions have been retained.

¹ *D. M.* 534 f.

² Above, p. 173.

³ *R. A.* 118 f. Other symbolic uses of turf are given in the same place.

⁴ in 936. See Pfannenschmid, *Erntefeste*, p. 50 ff., 84 ff. Much material is, of course, collected by Mannhardt, *Feldkulte*.

⁵ *Ibid.* 53.

In the classical cosmogonies, Tellus must have her Uranus, and a heaven-god is familiar enough in mythology; but the cult¹ of overarching sky seems to have left few traces in our popular customs. The conception is too indefinite; but no such vagueness has hindered the worship of sun, moon, and stars. For the cult and adoration of sun and moon by heathen Germany, Cæsar gives explicit evidence; and from many other writers, as well as plentiful survival, we know what extraordinary efforts were made to help one of these heavenly bodies when it came into eclipse. The notion was common to Roman and barbarian. "Vince Luna!" was the cry, and all manner of noise was made to drive away the monster who was thought to be on the point of devouring its victim.² The heading of the twenty-first chapter of the *Indiculus*, to which we have so often alluded and whose loss as a whole is to be so heartily deplored, runs: "De lunæ defectione, quod dicunt *Vinceluna*." The cult of clamor and terror lasted in distorted fashions into the seventeenth century, where cases are on record for England as well as Germany.³

Direct worship of sun and moon is found among barbarous tribes of the present day, and to a candid judgment must seem to have been one of the most certain and clearly primitive inferences of the human mind. As J. Grimm hints,⁴ people with any beginnings of agriculture, and especially those living in cold or temperate climates, would have a definite cult

¹ Myths, however, seem plentiful. See Tylor, *P. C. I.* 322 ff.

² The well-known classical reference is Juvenal, VI. 442. See also Tacitus, *Ann.* I. 28.

³ Tylor, *P. C. I.* 333 f.

⁴ *G. D. S.*³ 51.

of the sun. The universal doctrine that sunrise is fatal to evil spirits of every sort,¹ is itself ample evidence of this cult. Tylor has plentiful material for the ceremonies of savage tribes.² Corresponding to his account of the Samoyed woman who bowed morning and evening to the sun, we have the interesting fact that in the Upper Palatinate people doff the hat at sunrise.³ The same thing is done in honor of the moon; while the peasant of that region is fain to ask the sun to come and take away the "seventy-seven fevers" with which he is afflicted. So, in Lucian's time, the peasant kissed his hand "as an act of worship to the rising sun."⁴ In a note to his *Volkslieder*,⁵ Uhland gives some verses which show in quaint confusion a mingling of Christian and heathen ideas, with definite survival of element-worship:—

God bless thee, moon and sun,
 And likewise leaf and grass. . . .
 * * * * *
 When he came to the hilltop,
 He looked wide around:
 "God bless thee, sun and moon,
 And all my loving friends!"

Naturally, many of the festal fires which we have noticed, perhaps those of Eastertide, belong to the cult of the sun. Tylor reminds us that Aurelian instituted about the time of our Christmas a pagan festival for "the birthday of the unconquered sun."⁶

¹ In Norse tradition if a troll or giant is smitten by a ray of the rising sun, he is turned to stone. See *Alvismál*, 35.

² *P. C.* II. 287 ff.

³ Wuttke, *Aberglaub.* p. 12.

⁴ Tylor, *P. C.* II. 296.

⁵ *Kl. Schr.* IV. 148.

⁶ *P. C.* II. 297. A minor survival of sun-cult is found in the custom of orientation. See Tylor, *P. C.* II. 296, 421 ff.

As to the midsummer festival, which occurs at the summer solstice and was called by the Germans "*sonnewende*," we may safely connect the fires and wheels with some phase of sun-cult. The further north we go, the more obvious this relation; and we are told how after their long night the inhabitants of "Thule" climbed the peaks to catch the first glimpse of the sun, and then fell to celebrating their most sacred festival.¹

Cult of the moon is familiar in magic and witchcraft. Potent is the time of eclipse, and our Shaksperian almanac advises us that then is the season to get in our slips of yew; leave root of hemlock for a moonless night. Manifold superstitions about the moon go back to heathen rites, and against some of these the church made successful front. "No Christian man," says Beda in one of his treatises,² "shall do anything of witchery by the moon." This is the rationalism of the new order; but presently inherited superstition peeps through, for he tells us he has no doubt whatever that trees which be hewn at full moon are harder against worm-eating and longer lasting than they which are hewn at the new moon.³ Indeed, the moon is more important in superstition than the sun; it waxes and wanes, and in its setting of night offers the desirable elements of mystery. It is the most ancient timepiece, and we have seen that

¹ *D. M.* 601.

² *De Temporibus*, Anglo-Saxon trans. said to be by Ælfric, Cockayne, *Leechdoms*, III. 232 ff.

³ *Ibid.* 266, 268. A later superstition demanded that trees should be hewn down in the wane of the moon. *D. M.* 596. Cockayne gives a leechdom which is to be taken "when the moon is on the wane." *Leechdoms* I. 98, 100 (for loss of appetite and for lunacy).

Germanic popular government appointed its assemblies at the full moon,¹ and waited with awe upon the omens of its change.² Peace, of course, to the countless superstitions; but we may note that the Esthonian greets a new moon with the words: "Hail, moon! Mayst thou grow old, and may I grow young!"³ It is an interesting parallel when Congo folk say: "So may I renew my life as thou art renewed!"⁴

The stars are too numerous and too distant for much worship; superstitions like that of the peasant who says a prayer when he spies a falling star, may have some precedent in ceremonial worship, and so may the advice to any wife, that if she wishes the hawks to keep away from her chickens, she must "greet the stars" when she goes to bed.⁵

Prayers to day and night—palpable conceptions, however indefinite and vast—are recorded in Germanic tradition, although it is myth rather than cult which has claimed these provinces. Day is sacred, holy; oaths are made by it;⁶ and the same is true of night. In the Edda they are both invoked:—

Hail, O Day!
 Hail, Day's sons!
 Hail, Night and Sister!
 With gracious eyes gaze on us,
 Give us victory!⁷

A later bit from the German,—

God greet thee, holy Sunday;
 I see thee ride this way!

⁵ *D. M.* III.; *Aberglaube*, 595, 112.

⁶ *D. M.* 614 f.

⁷ *Sigrdr.* 3.

is a personification, and seems perilously near a mere poetic figure, though quoted from a form of blessing;¹ indeed, it is but ill-paying trouble to collect these doubtful relics. The worship of day is not a very evident inference; rather some more concrete, compact and direct object would have been chosen, — like the sun.

In the same way we find traces of season-cult, especially of spring and summer. The chief trace of this cult, faint enough, is the personification of the season in question, on which we must be careful not to lay overmuch stress. That “May stands at the door” is evidence of poetry and myth; so is Shakspeare’s jubilant tribute,

— jocund day
Stands tiptoe on the misty mountain tops;

or, in soberer vein, —

The morn, in russet mantle clad,
Walks o’er the dew of yon high eastern hill.²

This personification is common with the seasons, as in the old English lays to spring: —

Sumer is icumen in, —

or the less famous, —

Lenten is come with loue to toune.³

¹ *D. M.* 615.

² Another pendant is Milton’s exquisite picture: —

Gray-hooded Even,
Like a sad votarist in palmer’s weed.

³ Printed in Morris and Skeat’s *Specimens of Early English*, II. 48. It dates from the thirteenth century. The same phrase is used in the *Menologium* or Anglo-Saxon Calendar, where heathen forms occur throughout; e.g. *þæs þe lencten on tun geliden hæfde, werum to wicum*. “Since spring (‘Lent’) had come to town, to the dwellings of men.”

This phrase, that spring or any one of the months, is "come to town" that is, "come to the country," occurs constantly in our old literature; and it is matched by an expression in *Béowulf*, where "year" is used for "spring":—

. . . Winter locked floods
in icy fetters, till fared another
year to the house. . . .¹

On the other hand, the approach of winter is expressed with great power in an often-quoted Frisian law: "Si illa tenebrosa nebula et frigidissima hiems in hortos et in sepes descendit."² Winter — a cruel warrior, giant, or monster; summer or spring — a jocund youth: between these must be strife, and here indeed we find some rites which are doubly interesting since they point backward to Germanic worship and forward to Germanic drama.³ A ballad printed by Uhland⁴ gives the dialogue of such a contest as peasants would perform it, each figure clad in the proper symbolic costume; while J. Grimm collects a number of parallel survivals. A heading of the *Indiculus*⁵ may refer to this as a heathen custom which the church abolished as worship and tolerated as amusement. The strife of winter and summer was presented in old England, and the merriment of May Day, with its pole and boughs and dancings, seems to have some connection with the old cult of summer and spring.⁶

"Town," as in the case of Chaucer's "person of a town," is not our word, but a parish, a district, as it is still used in New England for "township."

¹ *Béow.* 1134. The alliteration is probably old, "*geâr in geardas.*"

⁶ *D. M.* 649. Grimm sums up the four fashions of celebrating this festival which still survive in Europe. See also 657.

CHAPTER XIV

THE WORSHIP OF GODS

Germanic gods and goddesses — Evidence of their cult — The days of the week — Woden — Thunor — Tius — Nerthus, and the Ingævonic group — Other deities.

THE rise and progress of a Germanic family, from mere communal life in the bounds of a narrow canton to the power of a dynasty and the range of a kingdom, were accompanied, we may well believe, by a corresponding development of the ancestral spirits. Where once the shade of the dead man walked protecting and helpful about the limits of his old home, there must now rule a gigantic spirit, fettered to no single habitation, but throned high in air or dwelling in remote and inaccessible places. Meanwhile the ancestral idea became blurred; the god was vaguely known as progenitor of the race.

Parallel with this process ran a sharpening and clarifying of the notions about natural forces. Curiosity, advancing further upon the outer world, reduced its conclusions to a system and made far more distinct the personality which had been so vague to the earlier inquirer. Definite biographies, one may say, were published about the elemental gods, and formed along with heroic legend the staple of primitive

poetry. What adjustments were made between ancestral and elemental worship it is difficult to say, though it is clear that the latter would be more public, the former more of a household and peculiar duty. We must content ourselves with an outline of the worship paid in late heathen days to the gods of Germanic tradition.

Monotheism, as we understand it, was unknown to the Germans; but they had the usual tendency towards Henotheism, the worship of one favorite god. Such in early Scandinavia seems to have been the position of Thor. Forms like "*got unde mir willekommen*"¹ do not show any monotheistic spirit; they may refer to the household deity, the Lar. Certainly they do not express our modern notion of God. As for the All-Father of Scandinavian mythology, we may even exclude the very probable Christian influence, and still find ample explanation in the phrases of ancestor-worship. Ancestor-worship, however, had little or nothing to do with the actual Germanic gods, who haunted no barrows, were cabined, cribbed, confined in no hut or village, but

As broad and general as the casing air,

housed in the far-off regions of the north. So ran popular belief; and northward, with outstretched hands, our forefathers turned, when they engaged in ceremonial worship. With the introduction of Christianity, the east became cardinal point of prayer, and the north, as we might expect, was banned as unlucky

¹ *D. M.* 13.

and a place of devils.¹ Who were, then, the dwellers of that cold Germanic Olympus?

Some definite evidence on this point seems to meet us in the names given to our days of the week.² The Germans were still of heathen faith when they took the names of these days from Rome and translated them into terms of their own mythology. The week of seven days is naturally given by the changes of the moon, its so-called "quarters"; but we seem to have traces³ of a week made up of five days only. Of the individual days, Sunday and Monday are obvious translations. But Tuesday, *dies Martis*, is credibly traced to the Germanic god Tius. Wednesday, *dies Mercurii*, has the stamp of Woden plain to see; and old Thor, our Saxon Thunor, is as evident in the name of Thursday,⁴ *dies Jovis*. *Frige dæg* is good Anglo-Saxon for the *dies Veneris*.⁵ Saturday is Anglo-Saxon *Sæteres dæg*, but also *Sæternes dæg*, evident translation of *dies Saturni*. The other form is not so easy to explain. *Sætere* means a seducer; and there may have been a deity with that by-name, — Loki, the Scandinavian, has been desperately sug-

¹ R. A. 808; G. D. S. 681. In the *Haverford College Studies*, No. 1, "On the Symbolic Use of Black and White," I have collected some material on this subject. It is very significant that an Anglo-Saxon charm against wens conjures the evil *into the north and to the mountains* (*Haupt's Z.* xxxi. 45 ff., printed by Professor Zupitza); and a Finnish charm sends the pestilence to the same place. In old judicial forms this dislike of the north is evident: criminals were hanged on a northward tree. In the *Frere's Tale* of Chaucer the fiend (in disguise) tells that he lives "in the north contre." Much more could be quoted to the same effect.

² The general question is discussed, *D. M.* 101 ff. See also *C. P. B.* I. 427 f. For *Frisia* see Richthofen, *Fries. Rechtsges.* II. 431 f.

³ *Ibid.*

⁴ Old Frisian *Thunresdei*.

⁵ Confusion of Frigg and Freyja meets us in Norse tradition. *D. M.* 251.

gested, with a shy look at Danish *Lørdag* as corruption from the name of the god, — though this seems unlikely. Kemble suggests *settere*, “one who arranges or orders”; but the analogy with Saturn is after all so near as to save us much guessing.

Evidence of cult lies, further, in those names of places which have their origin in the name of a god. For example, the strongest presumption in favor of a god *Sætere* would spring from such cases as the mention of *Sæteres byrig* in an Anglo-Saxon document under date of the year 1062;¹ and in Scandinavia the popularity of Thor and his worship is abundantly proved by similar means. Petersen² shows that the sturdy old god entirely distances all the other Scandinavian deities, and even in Normandy and the Danish parts of England, the name of Thor has left its mark. As with places, so with persons; and here again, so far as Scandinavia is concerned, we find Thor overwhelmingly the favorite,³ though Odin and Freyr are not neglected. It was customary there for a man to give his son to the service of the god, and to name the former from the latter. We have, in fact, two sorts of names derived in this fashion among Scandinavians of the heathen period. In the first instance any name might be combined with the name of deity in general, such as the Norse *Áss* or *Goð*. “Thus King Raum gave his son Brand to the gods,⁴ and thereupon called him Godbrand.”⁵ Or, on the other hand, the parent

¹ Kemble, *Cod. Dip.* IV. 457. There is a plant *sattorlaðe*, “the common crowfoot.”

⁴ Probably a substitution-survival of the hideous old rite of actual sacrifice of one's children.

⁵ Petersen, p. 39 f.

chose the name and service of some special god; and here again we find old Thor by far the most honored among all Scandinavian deities. Such a name was Thorgrim.

The chief god of the Germans when the Roman came in contact with them, seems to have been Woden.¹ This is the English form of the name, although some of our early homilies, evidently under Danish influence, call him Othon or Othin. The meaning of the name is not certain; some connect it with the Old English "wood," — "enraged," "furious;"² some with the notion of "wandering," with evident application to the Scandinavian myths which tell about Odin's travels and disguises; and others, again, see in the name a reflection of the god's intellectual qualities.³ Certain, however, is the fact that Woden is the wind-god, the deity of heaven in the literal sense, the prince of the powers of the air, although he is not the original ruler of Germanic deities; he has taken the place of an older heaven-god, Tius, and seems to have got the latter's wife in the bargain. This, however, is matter for mythology; let us turn to the cult.

In the first place, it is of great significance that we find this god in the genealogy of Anglo-Saxon kings; he is ancestor of the monarchs of Kent, Essex, East Anglia, Mercia, Deira, Bernicia, Wessex, and the

¹ The old German form is Wuotan, or among the Saxons, Wōdan; the Scandinavian form was Oðinn, now commonly called Odin; and in oldest English men said Wōden. The use of Odin in these pages indicates allusion to the Scandinavian god.

² "Wodan, id est furor." Adam of Bremen.

³ *D. M.* 109. There has been considerable discussion in the journals about this etymological problem. Lippert actually suggests Woden = wood, timber, — "the one in the Grove!" *Culturgeschichte*, p. 463.

Lindesfaran.¹ Beda speaks of Hengest and Horsa as descendants of Woden.² Names of places in England and elsewhere bear the same testimony,³ and not only places, but animals and plants as well. The annalists are apt to take Woden as a king who afterwards was deified: "Woden," says one, "whom the Angles worship as chief god, and from whom they derive their origin, was a mortal man, and king of the Saxons, and father of many races."⁴ The explanation of this supremacy of Woden in the later heathen times lies in his double attribute of intellectual skill⁵ — he is said to have "invented" runes — and love of war. Hence the fitness of his place as begetter of kings, and hence the later tendency to exalt him above all the gods. The constant warfare of these times made *Othinus armipotens*⁶ easily the central figure. Here, too, he seems to have taken the place of Tius, the older "Mars." To Odin the Scandinavians ascribed the invention of their mode of attack in battle, the wedge-shaped column, really of far greater antiquity than Germanic warriors ever knew, and known to these Norsemen as the Boar's Head. Moreover, Odin was father of war itself; when he threw his spear, battle was born in the world.⁷ The

¹ *D. M.* III. 377.

² *Hist. Ecc.* I. 15. "Erant autem filii Vietgilsii, cuius pater Vitta, cuius pater Vecta, cuius pater Voden, de cuius stirpe multarum prouinciarum regum genus originem ducit."

³ *D. M.* 126 f., 131 f.; Grimm, *Kl. Schr.* II. 58 ff. Names of places compounded with names of this god are comparatively rare in Scandinavia, where Thor is overwhelmingly the favorite. See Petersen, p. 43 f.

⁴ *Vita S. Kentigerni*, quoted by Holtzmann, *Germ. Alt.* p. 251.

⁵ In Roman interpretation he is called Mercurius; and in *Sal. and Sat.* the question "Who invented letters?" is answered, "Mercury the Giant." See also *D. M.* 126.

⁶ So Saxo calls him.

⁷ *Vqluspa*, ed. Hildebrand, 28.

spear was his peculiar weapon, and was still the chief arm of Germanic soldiers in the time of Tacitus. Scandinavian cult, in spite of Viking fashions which set so mightily toward the god of wisdom and warfare, clung grimly to old Thor; but it bowed enough to new ways to change several of its great festivals and in them to honor Odin, giver of victory, as well as Thor, the protector of house and home. Such a feast in honor of Odin was held about the beginning of summer, when the campaign opened, and ways whether of land or of sea, became easy of passage.¹ We may suppose this habit to have been Germanic as well as Scandinavian. Paul the Deacon's famous story shows two rival tribes asking "Wodan" for victory. Of course each army promised sacrifice — its slain enemies — in return for such a gift; and we find in the Norse sagas this or that hero hurling his spear over the heads of the hostile band, and crying: "Odin have you all!" The wolf is Woden's beast, and the raven is his bird; the latter is also a sign of victory, not at all the thing of evil it became in later times. Even as a commonplace of diction the raven has joyous meaning, as in the lines of *Béowulf*: —

Till the swarthy raven splendors of heaven,
blithe-heart, boded.²

Another feature of his cult which connects Odin or Woden with the new Germanic period, is the fact that he was looked upon as a protector of the merchant and sailor; ³ he aided the bargaining of the former, and to the latter he gave a favorable wind.⁴

¹ Petersen, p. 88. ² 1801 f. ³ See material in Müller's *System*, p. 187.

⁴ Grimm's god "Wish" is now generally rejected. It was a personification in mediæval poetry.

Moreover, since he was the god that sent forth pestilence and disease, heathen logic inferred that he could best rescue from these ills; as the Scandinavian cried, in moments of sudden danger, "Help me, Odin!" so in the time of sickness. Luckily we have a genuine relic of the old Woden cult, an incantation preserved in widely sundered dialects, and of undoubted Germanic origin. It is the companion charm to that which invoked the Valkyrias,¹ and was found with it in the library at Merseburg:²—

Phol and Wodan fared to the holt:
 then Balder's foal's foot was wrenched.
 Then Sinthgunt³ besang it and Sunna her sister:
 then Fria besang it and Volla her sister:
 then Wodan besang it, who well knew how,
 the wrenching of bone, the wrenching of blood,⁴
 the wrenching of limb:
 bone to bone, blood to blood,
 limb to limb, as if they were limed!⁵

Even if we admit Bugge's theories, and let Phol mean the apostle Paul, and Balder mean "the Lord," we have nevertheless plenty of heathendom left. Woden is undoubtedly central figure; and whatever elements have been introduced from Christian sources, they have been obviously substituted for the older heathen fashion.⁶ What makes this charm of supreme importance is the great number of variations found in the different Germanic countries. It appears in Norway and Sweden, in Scotland, in

¹ See above, p. 376.

² MS. of the tenth century.

³ Sinthgunt, says Bugge, *Studier*, p. 297. ⁴ *I.e.* of veins. Bugge.

⁵ Glued together.

⁶ Bugge suggests "Frija and Wodan," p. 307 of the German trans. of the *Studier*.

Flanders, and elsewhere.¹ As Scherer says, Woden is "supreme physician," — and here is need of the best.

Still another charm, this time from the Anglo-Saxon, shows us Woden as final appeal in a somewhat similar emergency. In the charm of Nine Worts to be used against poisons,² we have a list of the virtuous herbs, with one or two probable heathen references. Then follows: —

These nine are opposed to poisons nine.
Sneaking came snake, tore asunder a man.
Then took Woden nine Wonder-Twigs:
he smote the Nadder,³ in nine [pieces] it flew. . . .

Thus Woden, in this place, performs an act of sorcery; and the twigs are in direct accord with the Germanic method of casting lots described by Tacitus.⁴ These charms are of great interest. Less important, however, though not without bearing on our subject, are the many customs of peasant-life which seem to point back to an older worship of Woden. In some of the German cornfields it was the habit at harvest-time to leave a heap of corn "for Woden's horse." A writer living in Rostock in 1593 describes the custom of Mecklenburg at rye-harvest, when they gave grain to the god, with the rhyme: —

Wode, give thy horse fodder.
Now thistle and thorn,
Next year, better corn!⁵

³ Adder.

⁴ *Germ. X.* See below, p. 467.

⁵ *D. M.* 128 f. Grimm gives a number of parallel cases. See also Mannhardt's *Feldculte*; Pfannenschmidt, p. 107 ff.

Trees were sacred to him, and in his grove offerings were made of captives, criminals, or even beasts. His worship was widespread and deeply rooted; when the heathen, by a specified oath, renounced their old faith and joined the church, they were compelled to name Woden as one of the devils and monsters.¹ In Scandinavia he seems to have received, in Viking days, supreme honors; but, as we shall presently see, Thor was the real god of the Northmen. Still, in the famous temple at Upsala in Sweden, described by Adam of Bremen, Odin was represented by an image "like to Mars," — that is to say, fully armed.² He it was who received the soul of the warrior in the new-fashioned heaven of Viking Scandinavia, Valhalla; and to him the men of war everywhere — and war was everywhere — put up their prayers and in stress of battle offered service, child, or proper life. By the *Interpretatio Romana* he was called Mercury.

To Thunor, as the Anglo-Saxon called him, the Thor of the Scandinavian peasant, there must have belonged a widespread Germanic cult. Especially was this the case among the Norsemen, where, as Petersen's book shows beyond doubt, Thor "the land-god" was worshipped above all other deities. He was called Jupiter by the Romans, and that not solely, we may imagine, on account of his thunderbolts. It is probable, however, that in the *Germania*,³

¹ Renunciation used under Boniface by Saxons and Thuringians: "Ec forsacho allum diabolos wercum and wordum, Thunær ende Woden ende Saxnote ende allum them unholdum the hira genotas sint." "I forsake all devil's works and words, and Thuner and Woden and Saxnot and all the monsters who are their companions."

² "Wodanem armatum sculpunt." Adam Br. IV. 26.

³ Cap. IX. See also Zeuss, *die Deutschen*, p. 25.

Tacitus calls him Hercules; for Müllenhoff reminds us that with the Romans Hercules was not only a hero, but also a god. Additional testimony to Thor's or Thunor's importance is the fact that the arch-fiend of Christian times, the devil himself, takes the place of the old thunder-god.¹ In Scandinavia men made most solemn oaths in calling upon Thor, and they celebrated his feast at the sacred time of Yule.² As god of the home and all that belongs to it, he was worshipped first and foremost of the deities; and we may be sure that the rough satire of the Harbards Lay, where Odin boasts of his own amorous and warlike feats, mocks Thor for his homely ways, and generally plays the *miles gloriosus*, was not meant for the ears of peasants. They prayed to him for a mild winter, an early spring, and generous crops; his first thunderings heralded return of warmth and vegetation.³ As late as the eighteenth century a Scandinavian woman was known to pray regularly to Thor;⁴ and the Anglo-Saxon homilies bear witness to the stubbornness of Thunor's cult on English soil.

Thor's thunder, audible sign that he and his hammer were fighting ice-giants and obstinate spirits of the northern hills, was regarded as more a benefit than a terror. It symbolized fertility; and we find several plants named after the thunder.⁵ The wood of a tree which had been struck by lightning was good for many purposes, and toothpicks made of it

⁵ *D. M.* 152 f.

are still thought to cure the toothache.¹ Any man who was smitten by the bolt was regarded as particularly happy in his taking-off.² Of trees, the oak was dedicated to the thunder-god, — a bold and not ignoble piece of religious invention. His day was Thursday, still in every regard a lucky day; in Scandinavia the traditional day for a wedding, and of good right, if we consider that it was Thor's hammer which "hallowed" every bride.³ The public assembly was held in most Scandinavian districts on the Thursday; and we must remember the hammer-cast which marked out the borders of a judicial court, as well as the fact that Thor was the patron and god of such an assembly. Most significant is the vast number of Scandinavian names which are compounded with the name of Thor; places — where we may compare the German Donnersberg — and people abound in proof of this favorite patron; while but few can be found which bear the stamp of other gods or goddesses.⁴ Indeed, some of the names are directly associated with the processes of cult; Thorkell, for example, from Thorketill, and probably Thurston from Thor's stone.⁵ Not only these names; the kennings which express the god himself, are full of significance for his worship.⁶

Almost alone of Scandinavian gods, Thor found lasting representation in a rude picture carved on stock and stone,⁷ even on ships,⁸ — "a long-bearded face,

⁸ *Ibid.* 84. It is probable he was once god of battles.

with the hammer hung beneath";¹ while his actual image was adorned with gold and silver, and set up in the holy places. Runes, moreover, add their testimony to the universal nature of Thor's cult in Scandinavia.² Even the vanity of our Germanic ancestors took a religious bent, or more correctly went hand in hand with superstition, inasmuch as their ornaments were often made in the shape of Thor's famous hammer. Some of these ornaments are of striking beauty,³ and were meant to hang as charms or amulets about the neck; for to Thor men prayed in times of sudden danger, as well as in sickness and want.⁴ He was chief guardian of the home; and on the posts of the high-seat, where sat the master of the Norse household, was carved the face of Thor. Viking belief assigned the souls of dead warriors to Odin, while "Thor has the thralls";—yet not as god of the thralls did he take them, but rather because the servants were part and parcel of the household.⁵

The god whose old Germanic and Gothic name must have been Tîus, Old High German Zio, Scandinavian Týr, but in English was known as Tîw, was once worshipped as the heaven-god, but seems to have been the war-god as well. A gloss of the Epinal *MS.*, which goes back to the seventh century, a most venerable witness, makes Tiig the same as Mars.⁶

¹ *C. P. B.* II. 464.

² Petersen, p. 51 ff.

³ *Ibid.* p. 75.

⁴ *Ibid.* 56; and Adam of Bremen says of the Thor image at Upsala: "Si pestis et famis imminet Thor ydolo lybatur."

⁵ *Ibid.* 62. A mass of information about Thor may be found not only in Petersen's work, but in the brilliant piece of investigation by Uhland, *Der Mythos von Thor*. While the bulk of the book is taken up with theories about the "meanings" of myths, there is much solid material.

⁶ The *g* in this form shows it to be of Mercian origin.

As with the other gods, places were named after him;¹ and songs of battle were chanted in his honor.² It is supposed that he was the deity worshipped in the grove of the Semnonēs³ with such strenuous rites. Tacitus tells us that human sacrifices were offered to Mercury and Mars, — that is, to Woden and to Tius; and similar offerings to a war-god are related by the historian Procopius.⁴ The sword-dance described above⁵ was doubtless in honor of this god, and Grimm connects with him the worship of swords recorded by old historians.⁶ At the time of Tacitus and in the neighborhood of central and northern Germany, Tius seems to have held the place taken in later times by Woden. His day, Tuesday, has a few superstitions connected with it which point to older cult; for instance, it must be on the Tuesday that the plant is gathered which warriors use for crown.⁷

In Scandinavian cult we find not only a Tyr, but a god who is really a "hypostasis" of Tyr or Tius, — Heimdall, "the world-glad." Rams were sacrificed to him. Another hypostasis of Tius, and more interesting to us, is Saxnéat or Saxnôt, "the sword-companion" or brother in arms,⁸ who figures above as one of the gods to be abjured in the Old German renunciation, and is undoubtedly Tius under another name.⁹ Saxneat plays an important part in the

⁹ These names indicate various phases of warfare, as Müllenhoff notes in his important paper in Schmidt's *Zeitschrift f. Geschichte*, Vol. VIII.

Anglo-Saxon genealogies, — for example in the royal ancestry of Wessex.

Two inscriptions which Scherer laid in 1884 before the Berlin Academy, would seem to show that Tius even acted as guardian and god of the popular legal assembly. He appears as “Mars Thingsus,” *thing* being the Germanic term, still used in Scandinavian tongues, for a legislative body. The inscriptions were found in 1883 on two large votive altars near the old Hadrian’s wall in Great Britain, at a place called Housesteads; they show that the altars were erected by a division of Frisian cavalry serving as part of the imperial army under Alexander Severus (222–235), and for some special aid or favor were dedicated to Germanic deities, — Mars Thingsus and the so-called *Alaisiagae*, Bede and Fimmilene, — as well as to the Roman imperial family. F. Kauffmann¹ asserts that Mars Thingsus, while undoubtedly Tius, is not addressed as a god of popular assemblies, but as the patron deity of that battalion or division; for the Germanic army was arranged by clans, and the name of a tribal assembly could be transferred to a military brigade. However that may be, here is Tius worshipped by very near relatives of our own ancestors, whether or not as god of the popular gathering. We may remember that these meetings were under the special protection of a god, and hence were always controlled by the priests, who alone had power to command silence and to punish offenders.²

Another god is called in Scandinavian myths Freyr. He is interesting to us as the probable god whose worship was most popular among our coast-

¹ *P. B. Beiträge*, XIV. 200 ff.

² Tac. *Germ.* XI.

dwelling ancestors by the German Ocean. In the opinion of certain scholars, Freyr and Béowulf, the hero of our old epic, are one and the same god, and with Scandinavian Freyja and Njörthr represented a brother and a sister who were worshipped by the Ingævonic race as far back as the time of Tacitus. The female was then known, in Roman transliteration, as Nerthus,¹ and her cult is described by the historian. In this worship were bound together Reudigni, Aviones, Anglii, Varini, Eudoses,² Suar-dones, Nuithones, — all of them tribes which lived in Schleswig, Holstein, and about Elbe mouth. Nerthus, explains Tacitus,³ is Mother Earth, and these people “believe that she enters into human affairs, and travels about among the people. In an island of the ocean there is a sacred grove, and in it a holy chariot covered with a cloth. Only the priest is allowed to touch it. He knows when the goddess is present in her consecrated place, and in all reverence accompanies her as she is drawn about by cows. These are joyful times and places which the goddess honors with her presence, and her visit makes holiday. People begin no war, do not take up arms, all weapons are put away; peace and quiet only are then known and welcome, until the priest leads back to her holy place the goddess, now wearied of mortal fellowship. Then the wagon, the covering-cloths, and, — if one cares to believe it, — the divinity herself, are washed in a hidden lake. These services are performed by slaves whom the same lake presently

¹ She is not mentioned in the Edda.

³ *Germ.* XL.

swallows up. Hence spring the secret terror and the sacred ignorance about something which is seen by those alone who are doomed to immediate death." This is the oldest detailed account of Germanic worship, and its subject is a goddess of peace and plenty, who makes for the promotion of agriculture, trade, and the arts of civilization. In Scandinavia, centuries later, we find a god Niörthr who loves the water, and especially the swan's song, and is worshipped by seafaring folk as the protector of traders and trades. The fact that our old Germanic goddess was worshipped in a season of general peace points to mercantile opportunities; and the meeting of the related tribes under such a sanction was doubtless the occasion of barter and trade, — like the Easter or Michaelmas *messe* of mediæval Germany. That trade was an object of these meetings is proved by the account of the Suiones in Tacitus,¹ by the religious gatherings at Upsala in Sweden described by the later historian, and by the story of places like Lethra in Denmark, and Throndhjem in Norway, where trade and cult went together hand in hand. Hence the gods of traffic, agriculture, peace. The cult of Nerthus, says Müllenhoff,² arose in commerce with foreign sailors and tradesmen, and naturally was full of associations with the sea. A few vague allusions and survivals, such as the ship drawn by German weavers in the neighborhood of Cologne, or the mention of a ship in connection with the worship of "Isis" — the *Interpretatio Romana* again — may help to strengthen our notion of this old cult.³

¹ *Germ.* XLIV.

² *Haupt Z. N. F.* XI. 11 f.

³ *D. M.* 214 ff.; *Germ.* IX.; Simrock, *Mythol.* p. 369 f.

The name of Nerthus, which suggests a Celtic word meaning "strength," is evidently to be connected with the later Scandinavian Njörth, who in the Edda is father of Freyr: they were originally one and the same person. Corresponding to Freyr and Freyja in the Norse system, scholars have assumed a Njörth and Nerthus, the same pair under other names. In Sweden, Freyr was a very prominent god, and his image stood beside the images of Thor and Odin. Freyr, like the older Nerthus, had a chariot which was drawn about the countryside every spring, while the glad people worshipped and made holiday. In the chariot was a young and beautiful priestess, answering to the priest who went about with the wagon of Nerthus.¹ Here, too, was a time of peace; and Freyr was asked to give rain and sunshine, fertile soil, and a prosperous year.² He presided over marriages; and Adam of Bremen speaks of his image as a god of fecundity. The boar was sacred to him, and was not only sacrificed to him, but is said to have drawn his wagon; while even in recent times, Swedish folk were wont to bake cakes in the shape of a boar, remnant of the old Freyr-offering.³ Curiously enough, in the account of the Æstii, whom he evidently takes to be Germanic,⁴ Tacitus says they worship a *Mater Deum* and wear figures of the boar.⁵ These were probably made not of metal, but of wood, or of an even softer material. As the military spirit waxed with conquest, the peace-

⁵ The wagon is a conspicuous thing in the cult of the Phrygian *magna deum mater*. Lucret. *de rer. nat.* II. 597 ff., and *D. M.* 211.

ful emblem served as warlike decoration; Anglo-Saxon warriors wore the boar upon their helmets; and the boar's head, on which Scandinavian warriors took oath, is known in the Christmas feasts of England. Oxen, too, we find used for this sacrificial purpose, and hear of them occasionally under the poetical name of Freyr.¹ Horses, too, were sacrificed to this god; and in Sweden on solemn occasions the slave, the captive, or even the citizen, was offered as a last resort.

Petersen gives a few Scandinavian proper names, which were compounded with the name of Freyr.² This, itself, means simply "prince," "lord," "master," and is familiar to us in its feminine form, as the German "Frau." Freyr and Freyja are simply "the lord" and "the lady"; they could appear under different names, as in Anglo-Saxon the god Ing, mentioned by a poem known as the "Rune Lay," and evidently the ancestral god of the Ingævonic race, is undoubtedly none other than Freyr.³ Significant in this reference of the Rune Lay is the mention of Ing's chariot, which, as Müllenhoff remarks, is assigned only to the highest gods:—

Ing was erst with Eastern Danes
seen on earth, but eastward since
o'er the wave he went; his wain ran after.
Thus did Hardings the hero call.

Ing is further mentioned in our Anglo-Saxon genealogies;⁴ and in *Béowulf* we have the *fréa Ingwina*, "lord of the Ingwine." *Béowulf* himself, as has been said above, is assumed by many as another

¹ *D. M.* 176, 179. For other survivals of the cult, see *D. M.* III. 76 f.

⁴ *D. M.* III. 384 f.

phase of the same deity.¹ There is no doubt that the cult of this divinity or group of divinities, centred near the North Sea, and attested from earliest times, is for us the most interesting fragment in all Germanic mythology; it is an authentic, even if blurred and rapid glimpse, at the religion of our own forefathers.²

Let us now look for a moment at the Scandinavian Freyja, the later representative of Nerthus. Unfortunately, she has been confused with Frigg (this is the Norse form, as is also Freyja), the wife of Odin. Thus in Anglo-Saxon genealogies, we have "Frea" set down as Woden's wife, whereas the proper name in Anglo-Saxon would be Frigg.³ In all Norse cult, Freyja is abundantly worshipped, and in close relation to the cult of Freyr. She gave men fertility, peace, and happy wedlock. Boar and ox were sacrificed to her;⁴ she has, like Nerthus, the chariot of highest divinity. Connection with ancestor-worship is found in the widespread belief that a woman fared directly to her after death; in Christian times, the legend ran that souls spent their first night after death with her successor, St. Gertrude, the second with the archangels, but on the third went as their doom directed.⁵ The cat was sacred to her; a happy recognition of her manifold connection with household blessings, and not, perhaps, without influence on the later belief about witches.⁶ As Grimm remarks, when

¹ See the preface to Mannhardt's *Mythol. Forschungen*, in Q. F., LI. p. xi.

² Have we a phase of the Terra Mater in that mention of Erce, and the *folde, fira modor*, of the Anglo-Saxon charm?

⁵ *D. M.* 50.

⁶ *Ibid.* 254.

a bride goes to marriage in fair weather, folk say that she "has fed the cat well." Lovers prayed to Freyja, and for the purposes of cult, as well as by the traditions of mythology, she is in every way Germanic goddess of love.

Probably Freyja and Frigg, Fréa and Fricg, were originally one and the same goddess; and furthermore, Bugge¹ may be right in ascribing many of the tales about Freyja, to the stories heard by Vikings, and less truculent travellers, about the classical Venus. As Lady of the Gods, however, Fricg, the wife of Woden, must go back to an older consort of the older god, — Tius, we may conjecture. Remains of the cult of Fricg are collected by Grimm.² As wife of Odin, she was worshipped in Scandinavia, and like Freyja — one may almost say *as* Freyja — she presided over marriages, and was called upon for help by barren women. J. M. Kemble has found relics of Fricg cult in England; and they have been noted in Lower Saxony.³ Perhaps the local name Freckenhorst is derived from her worship.

Near the mouth of the Scheldt were discovered, in 1647, numerous altars and other stones containing inscriptions to one Nehalennia; and similar inscriptions have since been found at Deutz on the Rhine. The goddess is represented "in costume like a Roman matron"; a dog is often near her, as well as baskets of fruit. Sometimes she appears with Neptune, and has her foot upon the bow of a ship. Kauffmann sees in her a goddess of sailors, explains the name Nehalennia itself as ultimately based on the Germanic word for "ship," and, as others have done,

¹ *Studier*, p. 10.

² *D. M.* 252 f.

³ *Ibid.*

brings her cult into connection with the account given by Tacitus of the Germanic worship of Isis. As Isis, this Germanic goddess was worshipped by the foreigners who thronged the border regions, or came hither in the Roman ships; for Tacitus speaks of the Frisian waters as thickly navigated by such craft. So far Kauffmann. Grimm thought the name was Celtic and connected with the word for "spinning."¹

Another cult is mentioned by Tacitus, — that of the goddess Tanfana. While the deities mentioned above belonged to the circle of Ingævonic religion, this goddess seems to have been best known to the Istævones; and since it was among these tribes that the worship of Woden began and grew into such stately proportion, scholars have conjectured that Tanfana was his companion. Let us hear Tacitus.² The legions made a night attack upon the Marsi, who were encamped not far from the modern Dortmund, holding festival, "lying upon their beds or about the tables, care-free, not even with their sentinels posted . . . there was no fear of battle, and yet no peace, unless it were the languid and disordered peace of drunkards. . . . A space of fifty miles [the Cæsar] lays waste with sword and flame. Not sex, not age, were spared, things public nor things sacred (*profana simul ac sacra*); even the temple which is most famous among those races, which they call the temple of Tanfana, — all was levelled with the ground." An inscription has also been discovered, — *Tanfanae sacrum*; but its genuineness is denied.³ Another deity casually

¹ *D. M.* 347, 404; Simrock, *D. M.* 373, 576; Kauffmann in *P. B. Beit.* XIV. 210 ff.

² *Ann.* I. 50 f. It is the year 14 A.D.

³ *D. M.* 64, note².

mentioned by Tacitus, and of probable Germanic belongings and Celtic origin, is Baduhenna;¹ and an inscription to a goddess Hludana has been connected with the Scandinavian Hlothyn, — a connection stoutly denied by Sophus Bugge.²

We are concerned here not with myth but with actual worship, and cannot delay over names like that of Balder. Even if Balder was a real Germanic god, we have no traces of his cult, save in the charm given above — where Bugge contends that Balder is simply a title, “the lord,”³ — and in the names of a few places. He had a son, Forseti, “foresitter,” president of a court, the ideal judge; and Grimm connects this son with the Frisian god Fosite.⁴ Of this god’s cult some account has been preserved. Liudger, a Christian missionary preaching the gospel among his heathen brethren, sailed to the island Helgoland (holy isle),⁵ on the borders of the Danish and Frisian folk, called after the name of the god Fosetesland (a nomine dei falsi Fosete Foseteslant est appellata). Another holy man, Willibrord, visited this island; and we are told that it was entirely dedicated to the service of the god. A well or spring was sacred to him, from which none durst drink save in utter silence. Temples — whatever we are to understand by the term — were erected in his honor; treasure was gathered there; and flocks and herds grazed about the place, not to be touched

¹ *Ann.* IV. 73.

² *Studier*, p. 574.

³ On the other hand, J. Grimm thinks Phol a familiar form of Balder. *D. M.* III. 80.

⁴ *Fana Fosetis*. See *D. M.* 190, III. 80.

⁵ Möller, *Altengl. Volksep.* p. 91, note, thinks that Helgoland was the sacred isle of the Saxons south of the Eider, and not to be identified with the holy isle of the North Anglians, described by Tacitus, *Germania*, XL. 40.

by mortal. It was believed that death or madness would fall upon the wretch who desecrated any of these things; moreover, the king was wont to punish such offenders in the direst fashion (*atrocissima morte*). Willibrord baptized three persons in the well, and his men killed some of the sacred animals; hence lots were cast by the outraged heathen to see if the Christians should die. One man was thus marked for vengeance, but favoring lots allowed the saint and his other companions to go free. When Liudger came, he destroyed temples, groves, and whatever savored of the heathen cult. The name, Fosetesland, was of course consigned to silence; but "Helgoland" preserves the memory of ancient sanctity. Adam of Bremen says the place was especially venerated by sailors and pirates, "whence it takes the name Heiligland." As late as the eleventh century, superstition maintained its old terrors; and it was believed that if any one committed robbery on the island, even in regard to the meanest object, he would suffer shipwreck or a violent death. To the hermits who were settled about the place, pirates brought a tenth part of their gains. There is no doubt that this island was a chief sanctuary of our heathendom, and Richthofen is inclined to see in Fosite the "president" of the gods, Woden himself.¹

¹ In his book on *Friesische Rechtsgeschichte*, II. 399 ff., 424 f., 431 f., 434 ff., Richthofen has collected the material used above, — the lives of the two saints, the account of Adam, etc.

CHAPTER XV

FORM AND CEREMONY

Places of worship — Temples — Images and columns — Priest and priestess — Prayer, offering and sacrifice — Survivals — Divination and auguries — Runes.

WHERE did the Germans worship? According to Tacitus,¹ who indulges here in a bit of rhetoric, they think it unbecoming the greatness of the gods to shut them in with walls or to image them in human shapes. This delicate reasoning never occurred to a German; but it is evident that, as a fact, he had no temples such as the Romans had, no statues of the classical sort, and, of course, nothing of that art which lent itself so readily to the purposes of sacred decoration. But places of worship he must have had; and these, as we are told in a somewhat obscure passage of the *Germania*,² were groves. Islands seem to have been favorite places for the purposes of a cult; and, as we have just seen, all of Helgoland was given up to such a use. Still, groves were the best-loved temples. The house of gods, like the house of men, could be built about a tree; and we cannot altogether reject the romantic reason, added by Jacob Grimm, that something oracular and divine attracted the early

¹ *Germ.* IX.

² *Ibid.* "Lucos et nemora."

worshipper in the swaying of branches and the low murmur of the leaves. We may suspect from the exquisite tortures which tradition assigned to him who injured a tree, that it was once a question of divine as well as human property, — like the Jupiter-Oak which Boniface cut down. Mention is made repeatedly of these sacred groves among the Germans. Such was the grove of the Semnones, described as follows by Tacitus.¹ “At a specified time, representatives of all the clans of this race assemble in a forest which is sanctified by ancestral auguries and immemorial fear, formally offer up a human sacrifice, and celebrate their awful and barbaric rites. A peculiar reverence attaches to this grove. No one enters it unless bound with fetters, in order to show his own humble case and the power of the divinity; and if he chances to fall, he is not allowed to rise and stand up; prone as he is, he must roll along the ground. The whole superstition implies that in this grove is the origin of the race, here lives the deity who rules them all, while all the rest are but subject and tributary.” Mention is also made of a *silva Herculi sacra*, and of a *lucus Baduhennæ*.² The grove of Nerthus is another example; and even the “temple” at Upsala, described by Adam of Bremen, seems to have been originally a grove. Moreover, we know that there were places of sacrifice in these primitive temples — *barbaræ aræ* is what Tacitus calls them.³ The simple forest fashion, however, seems hardly to have required an altar, and in its early simplicity Germanic worship was doubtless content to hang the victim, or parts of it, directly upon the sacred tree itself. Around this

¹ *Germ.* XXXIX.

² *Tac. Ann.* II. 12, III. 73.

³ See *Ann.* I. 61.

sacred tree, with its fresh hung offering, marched or danced the worshippers, singing as they moved, and dedicating their gift to the local deity.¹ Müllenhoff refers to a dialogue of Gregory the Great, where the heathens are described as running in this fashion about a goat sacrificed "to the devil," with dedication of song and dance.²

It is not improbable that this place of worship was at the same time a place of burial, and in many cases may have been fixed originally by the tomb of a powerful ancestor, the founder of the race. Scattered branches of such a race would naturally unite at stated times about this centre of sacred tradition. Trees are planted at the place of burial, or a grove is chosen at the outset. "Each grove," says Tacitus, "is named after the god to whom it is sacred"; and it is not unreasonable to apply this to ancestral as well as to elemental worship. Such a tomb as is described at the end of *Béowulf* may well have been a typical place of worship for Ingævonian tribes;³ and the mingling of human legend with myth pure and simple — for *Béowulf* is as much god as hero — agrees in all probability with the confusion of two forms of worship. Lippert would refer to a similar origin the mediæval association

¹ "Germani ea, quæ diis offerebant, non cremabant neque aras neque altaria more græco ac romano habebant, sed capita abscissa et exuvias victimarum similiter et homines diis dicatos, sacris arboribus suspendebant; his quoque ferro cædere et scrobibus, aqua ac cæno mergere solebant." Müllenhoff, *de antiq. German. poesi*, pp. 11, 12.

² *Ibid.* Salt springs were also sacred places, for, as we saw above (p. 69), the god was thought to help the process of salt-making. *Ann.* XIII. 57, and *Amm. Marc.* XXVIII. 5.

³ Interesting is the Anglo-Saxon word *cumbol*, which Cook (*Mod. Lang. Notes*, 1888) shows to mean mainly a cairn.

of sanctified bones and other relics with the church itself.¹

Very early in its development, this Germanic place of worship would have a formal enclosure, made by ditch or wall or hedge; and of course the inmost part of the primitive "temple" would need all possible privacy — *secretum illud*, as Tacitus calls it.² Progress from such an enclosure to walls and formal building would be a matter partly of development, partly of influence from the pagan world. We should like to know how the English "fane" appeared which High-Priest Coifi helped to demolish. Beda³ speaks of the *aras et fana idolorum cum septis, quibus erant circumdata*, and says that Coifi, lance in hand, went up to the idols. This would indicate buildings and images.

Jacob Grimm insisted upon the existence of temples of elaborate fashion, and cited that "templum . . . Tanfanæ" which the Romans razed to the ground. Moreover, he called attention to the Frisian law of later times, which imposed penalties for the violation of a temple.⁴ In Scandinavia, at least for the later period, we must allow temples in the modern sense. The Norwegian emigrants who went to Iceland took with them materials of their old heathen temples, as

¹ *Rel. d. eur. Culturvölker*, p. 169.

² *Germ. IX.* Arminius speaks of the gods who dwelt within these *penetralia* as unseen by the people, and seen only by the priests. *Ann. II. 10.*

³ *Hist. Ecc. II. 13.*

⁴ "Qui fanum effregit . . . immolatur diis quorum templa violavit." See also Holtzmann, *Germ. Alt.* 176. The Germans seem to have thought that "death or madness" would fall upon the profaner; when the god did not punish, his priest or king took the task. See the account of the sacred place on Helgoland, p. 438, and Richthofen, *Fries. Recht.* p. 401.

well as earth from under the altars. In the *Eyrbyggjasaga* we are told of a definite case,¹ where it is the caretaker of a temple sacred to Thor, who emigrates. When he rebuilds in Iceland, whither he had carried "most of the woodwork," the new structure is "a great house, with doors in the side walls and near one end. Inside were the pillars for the high-seats, and in them nails called the gods' nails." It is evidently an exact imitation of the old temple in Norway. This heathen temple of Scandinavia seems to have been a rectangular building, rounded at one end, after the manner of an apse or choir in certain Christian churches, and running from west to east.² Besides this, there occurs a round temple, which may have been the more primitive form.³ The material was doubtless timber. Decoration and metal work were matter of imitation and opportunities; the lavish use of gold, which makes Adam of Bremen speak of the temple at Upsala as *totum ex auro paratum*, is not a characteristic of early Germanic fanes. Nevertheless, we hear of great treasure found in the temples of the heathen Frisians.⁴ In the primitive grove, with rough enclosure, there was doubtless ornament, but of a more barbarous fashion,— emblems and mystic signs, approaching the fetishistic order. In the "apse" were set up the images, such as there

¹ P. E. Müller, *Sagabibliothek*, I. 190 f.; Maurer *Bek. d. Norw. St.* II. 190, note.

² This explains the advice of Pope Gregory to use the English temples as Christian places of worship. See Petersen, p. 20, from whom much of this summary is borrowed.

³ Petersen, p. 23. Dimensions of the other kind of temple are noted; in one case, 120 by 60 feet.

⁴ Richthofen, II. 379. "Magnum thesaurum quem in delubris inveniant."

were ; and before them was a sort of altar covered with iron, whereupon burned a fire that durst not be extinguished, — “the sacred fire.”¹ Here lay the ring, dipped by the priest in sacrificial blood, and upon which all oaths were sworn ; but when the chieftain presided at popular meetings, he wore this ring upon his hand.² On this altar, moreover, stood the vessel which held the blood of sacrifice. No one was allowed to carry arms within the temple.

We have spoken of images set up in the “apse” of this later Scandinavian temple. What were they? Evidently in Scandinavia these were direct portrayals of the gods, as is clearly proved by the account so often quoted from Adam of Bremen. For older stages of our culture, we must observe great caution ; and if we find mention of images, we must ascertain definitely what we are to understand. In the *Germania*,³ a sanctuary of “Castor and Pollux,” so called, is said to have no images, *nulla simulacra* ; but the Germans, as Tacitus elsewhere informs us, were wont to bear into the battle *signa deorum*, — *effigies et signa*. What are *effigies et signa*? The school of anthropologists who lately have been picking our poor Germanic myths to mere shreds and tatters, tell us in their *interpretatio Africana* that the emblems in question were nothing more than fetishes, — old weapons with the head of a beast.⁴ Better is the theory of Müllenhoff,⁵ though after all the differ-

¹ Petersen, p. 24.

³ Cap. XLIII.

⁴ *Rel. d. eur. Cult.* 121.

⁵ *De antiq. German. poesi*, p. 13. Holtzmann refers to the later use of animals in coats of arms. See also Tac. *Hist.* IV. 22, for the *effigies*. Müllenhoff's words are: “signa . . . arma et instrumenta, quæ a mythologis nostris attributa dicuntur, e.g. lancea Mercurii (Wödani)

ence is nominal, that the *signa* were sundry signs or attributes of the gods, as the lance of Woden or Thor's hammer; while the *effigies* were figures of animals, like Woden's wolf or the goat of Thor. We hear of a bull among the Cimbrians, and of a snake among the Lombards, used for such a *signum*. The moment when line of battle was formed and the attack was begun, counted among the most sacred occasions possible in Germanic life; and these *signa* doubtless meant for the soldier the presence and aid of the deity invoked. They were borne into battle by the priests, and doubtless had been adored and consecrated during the night in their sacred grove, amid rites of the cult and that indispensable banquet "per noctem" which always preceded a Germanic fight.¹ We must also bear in mind another sort of images, which could have analogy with these "signs," — the posts of the high-seats, carved with the image of a god or his symbol. After a great victory over their rivals, the Saxons² set up a column with an "effigy" of one of their gods. Much has been disputed about this triumphal affair; but it seems to have been not so much an image as a huge pillar with rude carvings of a head and the usual symbols. Another and later account is more explicit. In 772 Charlemagne waged war against the Saxons, who were stubborn to desperation in their heathen faith; and he destroyed a

malleus Herculis (Tonantis, Thunaris), gladius Martis (Tivi), phallus Liberi . . . sed effigies secundum ipsum Tacitum (Hist. IV. 22) imagines erant ferarum quæ symbolice deos ipsos indicabant ut anguis . . . et lupus Mercurium, ursus et caper Tonantem. . . ."

¹ Müllenhoff, work quoted, p. 13; Tac. *Ann.* I. 65, II. 12; *Hist.* IV. 14.

² In 530 A.D. The account is given by Widukind of Corvey, I. 12.

sacred place of theirs which contained an *Irmingsul*, a column standing in the midst of a sacred grove, and held by all the neighboring tribes in boundless veneration. This *Irmingsul* is called now the "fane," now the "idol"; we shall hardly err in explaining it as a column more or less carved. The annals speak of masses of treasure which Charles carried away from this "temple," a trait which Grimm thinks quite legendary, the flourish of a chronicler, but which Richthofen defends as historical.¹ It seems reasonably sure that, whatever the nature of this *Irmingsul*, the heathen Frisians — they were our nearest continental relatives — had regular idols or images. The missionaries speak with horror of a heathendom which can seek help from stones and from deaf and dumb images, "*a lapidibus . . . et a simulacris mutis et surdis;*" and Richthofen's defence of this and other testimony seems to be valid.²

In Iceland and the Norse realm generally we find regular images of the gods. Adam of Bremen distinctly testifies to the three images at Upsala in Sweden, — Odin, Thor, and Freyr (Fricco); Odin as a warrior in mail, Thor, with sceptre, holding the middle place as greatest god, Freyr with the customary phallic symbols of fecundity and peace. Direct testimony about similar images in various parts of Scandinavia is collected by Petersen.³ Maurer says that little images of the gods were carried, amulet fashion, in the pocket of the pious Norsemen.⁴ Figure-

² *Ibid.* 421 ff., 448 f. No image of Foseti is mentioned in the account of Helgoland.

³ Work quoted, p. 33 ff.

⁴ *Bek. d. Norw. St.* II. 231.

heads of the Norse ship are probably to be referred to a similar origin. We hear, moreover, of prayer where the Norseman bowed before his images, or even threw himself on the floor of the fane; he did not look at the images, but held his hands before his eyes "in order to shut out the blinding glare of deity."

Priests were a Germanic institution known in all the tribes;¹ but it is better not to lay too much stress upon a priesthood. Cæsar, denying a priesthood, really concedes German priests;² the Cimbrians in Italy had priestesses; and Tacitus goes so far as to define priestly duties among the tribes of which he writes.³ In public life the German priest played a leading part, and, aside from times of war, seems to have had more civil power than even the head of the state; indeed, Scherer thinks⁴ that Munch and Maurer were right, against Waitz, in attributing priestly power to the chieftains. This assumption, as we shall see, derives its strongest support from the practice of Scandinavia; though there is an extreme case of priestly authority mentioned by Ammianus in his account of the Burgundians. The king, he says, may be deposed, if fortune desert the tribe in its campaigns or in its crops; but the priest (*sinistus*) may not be deposed.⁵ If we are only willing to waive the question of identity and not to consider too curi-

¹ W. Müller, *System*, p. 82.

² VI. 21. His denial is based on comparison with an elaborate system like that of the Druids. Grimm, *D. M.* 73.

³ *Minister deorum* is his term for priest. ⁴ *Anzeiger H. Z.* IV. 100.

⁵ "Nam sacerdos apud Burgundios omnium maximus vocatur Sinistus et est perpetuus, obnoxius discriminibus nullis ut reges." Am. Mar. 28, 5, 14.

ously the personality of the priest, we may find a clear and definite summary of his functions in the account of Tacitus, who tells us that a public priest casts the lots; accompanies the progress of a goddess; has charge of the sacred things—*effigies et signa*; is present at the great assemblies of the people, commanding silence and invoking divine protection; and, when sentence has been pronounced upon criminals, is entrusted with execution of the sentence.¹ In heathen Scandinavia it is a positive principle that all details of worship are closely connected with the administration of affairs in general, and testify to a union of church and state.² The king is high priest; and where a “jarl” acts as viceroy, he performs the king’s duty at sacrifice and banquet. In Iceland, the judicial districts were each under control of an officer who was at once judge and priest; and Maurer seems to assume that this custom was common to all Germanic races.³ The place of justice, of oath and trial and lawsuit, was the place of prayer and sacrifice. It was also, in all probability, a place of trade, as is proved by the history of many a holy resort which develops into a centre of trade, the capital city of the land. Trade and justice demand peace; and peace was only possible under the awful sanctions of a present god.

Little information reaches us in regard to the dress and habits of a Germanic priest. Beda says that Anglo-Saxon priests bore no weapons and rode upon mares, which as late as Chaucer’s time was deemed a disreputable mount.⁴ It is probable that the official

¹ *Germ. X., XI., XL., etc.*

³ *Bek. d. Norw. St. II. 210.*

² Petersen, p. 1 ff.

⁴ *D. M. 75; R. A. 86 ff.*

robe of a priest was white,¹ and we hear of Gothic priests "with hats," in distinction to the ordinary freemen with flowing locks. Striking is the costume of the Cimbrian sibyls, — gray-haired women dressed in white, with red over-garment and metallic girdle, but bare of foot. They cut the throats of the captives, and let the blood flow into a brazen kettle, — evidently priestly functions; while the wise-woman, of whom much has already been said,² was doubtless held in reverence little inferior to that felt towards the priests themselves.

Conjecture and uncertainty surround our efforts to discover the details of private or public rite conducted by these priests, and we must content ourselves with what we know of their ceremony as a whole. To us, perhaps, the simplest form of worship is adoration; but already in this "adoration" we have the notion of prayer and of the movement of the lips. Prayer, a crude desire for good to the person who is praying, may be attributed in some form to primitive races; but it is not the initial act of religious ceremony. Grimm distinguishes three periods of worship; the first knew only sacrifice, the second combined sacrifice and prayer, the third had prayer alone.³ But Tylor, who remarks that even the rude charm is really a prayer, seems to reject this classification;⁴ and we may allow some form of prayer in the rudest cult. Prayer was undoubtedly a matter of bended knee, crossed hands, and uplifted eye. Tacitus tells us

¹ *D. M.* III. 39.

² Above, p. 141. See also *Cæsar B. G.* I. 50.

³ *J. Grimm, über das Gebet*, *Kl. Schr.* II. 460.

⁴ *P. C.* II. 364, 373 f.

that the priest who cast lots glanced towards heaven as he took up the keavils;¹ while from other sources and survivals it has been surmised that the German looked in supplication towards the north as the home of his gods. As to the words or form, it is significant that Old Germanic poetry, while it contains plenty of greeting and invocation, does not preserve us a single prayer; and it is supposed by Meyer that this omission is made purposely.²

But the simplest form of worship is not a definite prayer, as we understand the word—a desire for good expressed to a power capable of granting what we wish. The primitive act is prostration as if before an earthly king, the sign of surrender and absolute submission.³ To fling one's self on the ground, or to bow neck or head, expresses the elementary act of religion. But after submission comes tribute, and indeed this is the main fact which proved submission, just as prostration symbolized it. Tribute to a heavenly power, whether conceived as ancestor or as personal power of nature, took a form which we call sacrifice. Of this presently.

Solemn chant and hymn, with dance, are among the earliest symbolic acts of worship. Scherer in his *Poetik* is at considerable pains to show why men should have hit upon these expressions of emotion, and sees erotic excitement as one of the leading causes.⁴ Devil-dancers and medicine-men testify to

¹ *Germ. X.*

² R. M. Meyer, *Altgerm. Poesie*, p. 389.

³ We have many of these symbolic motions in the submission of mediæval vassals to their masters. Pretty is the passage in the Anglo-Saxon *Wanderer*, when the exile dreams he is once more laying his head between his master's hands, and on his knee, and is "clipped" and kissed.

⁴ *Poetik*, Berlin, 1888.

the connection of dancing with religious excitement; and we may imagine that the pleasure of muscular exertion, analogous to the delights of feast and revel, was once thought to be shared by the spirits and the gods themselves. Dancing was a common occurrence in the rites of field and harvest. About the last load of grain, or the figure set up in the yard, the peasants form a ring and dance.¹ Dancing on and by the ancestral graves has been mentioned already,² and the village dance-place, undoubtedly a survival of the older place of sacrifice, is in some places still consecrated with great pomp and ceremony.³ Even the Christian church took over from heathendom this custom of dancing as a part of religious ceremony, and it would seem that the councils were forced to take measures against the abuse;⁴ so firmly was the practice fixed in popular tradition, that we hear of nuns dancing in a church—this in the eighth and ninth centuries—and of repeated rebukes from the clergy.⁵ The word *lâc* means in Anglo-Saxon both a religious ceremony and a game or play, a dance or “leaping”; the second syllable of “wedlock” is the same word, and points to a religious ceremony. Altogether, we may be sure of the great importance of dancing in the ceremonies of our heathen forefathers.

Undoubtedly, however, sacrifice was the central fact, and Grimm remarks that many of the words used for prayer go back to the notion of an offering.⁶ Symbolic acts such as the already-mentioned prostration in the grove of the Semnoncs, are, of course,

⁶ *Ueber das Gebet*, Kl. Schr. II. 461.

ancient enough; and we know that in Scandinavia men bowed before the images on ordinary occasions, but in formal prayer threw themselves down and prayed in the dust. Still, all this was only an outward flourish of the sacrifice. Religion was ceremonial and a bargain; the gods were not thought to give blessings *pour les beaux yeux* of their worshippers.

We have all grades of importance in the nature of the offering, from a simple gift of milk or flesh or grain carried out to a grave, or set in the corner of the house, up to the sacrifice of human beings. The German word for offering, and that for sacrifice, have disappeared: both expressions are now of Latin origin.¹ We may suppose that there were several words corresponding to the several kinds of offering, since we know that there was, in the first place, food given directly to the spirits of the dead, and that there was food or drink set out for the spirits connected with one of the elements. Out of this simple notion may grow an elaborate cult, such as the one found on the island of Rügen and described — perhaps seen² — by Saxo Grammaticus. The rites are Slavonic, but are probably not very different from the Germanic fashion. On the northernmost cliff of the island, with three sides of rock falling sheer to the sea, the fourth side an artificial barrier, lay the sanctuary. It was a wooden temple with double enclosure. Within was an enormous image which had four heads and was invested with a sword. In its right hand it held a horn made of different metals,

¹ For connection of *bless* and *blood*, see Skeat, *s.v.*, and Sweet in *Anglia*, III. 156.

² Lippert, *Relig. d. eur. Cult.* p. 92; Saxo, XIV. II. 319.

which the priest annually filled with wine, wherein he read the prosperity of the coming year. The cult was very simple. After harvest of each year, all people of the island came together at this temple, sacrificed certain animals, and celebrated a great feast. Before this, however, the priest was expected to sweep out the precincts of the temple with a sacred broom, taking care not to breathe while within, but running outside as often as he was forced to draw fresh breath. On the day of the feast, the horn of wine is examined, and emptied at the feet of the image; new wine is then poured into the vessel, while the priest drinks to the god. A great cake is laid upon the altar, which must vanish before another year. Prayers are made for a good crop, and then the priest dismisses the people to their feast. All this is merely an expansion of the primitive and simple rites of element and spirit cult.

The libation is a detached ceremony of these early rites, with evident origin in the worship of the dead. The early missionaries speak of a drink-offering (*diaboli in amorem vinum bibere*) which they met in heathen ceremonies; in simplest form it is the *minne-drink* to a dead relative and so ranging up to the *Odin's minne* itself. An interesting passage in the life of St. Columbanus by Jonas Bobbiensis, early in the seventh century, tells of a group of Suevi gathered about an immense vessel full of beer, with which they were about to sacrifice (*litare*) to their god Mercury, whom they called Wodan. The vessel was probably an "offering kettle," and the rites were unmixed with severer features, — merely a libation.¹

¹ Grimm, *D. M.* 46, 51.

The saint blew (literally) the cask to pieces. Of course, all this holy fervor did not drive the drink-offering into absolute disuse; there came the usual substitution of saints for heathen gods in the matter of libation, the drinking of St. John's or St. Gertrude's *minne* in a Christian church, as well as the survival in social customs, the loving-cup and the toast.

Mention is frequently made of milk, honey, fruit, even flowers, as offering in family worship. Yet it is probable that most of these offerings are compromises; they represent ancient rites of a far sterner character, and the blood of a victim slain upon the tomb. Heathen Germans of the early historical period had a few of these compromises, concessions to advancing culture; the *Indiculus* forbids, among other things, the baking of cake and bread in form of some animal — doubtless the beast ordinarily sacrificed to the god in question. In a Norse saga we find this mentioned as a part of formal worship: men “baked ‘images of the gods;’”¹ and there are many survivals known to students of folk-lore as well as to the youthful purchaser of a gingerbread horse. Other compromises for ancient sacrifices are the usages of field and harvest to which we have frequently referred. Reapers leave a few stalks of grain standing in the field and still declare that it is for Wode or some other disguised deity of old; while the Holstein peasant will not pick the last half-dozen apples from his tree.²

The sacrifice of animals themselves may have been at one time a compromise for more horrid rites, but

¹ *Frithiofs*. and *D. M.* 51.

² *D. M.* 47.

this is to consider too curiously for our purposes. In animal sacrifice, blood plays its great part; for it has always been matter of popular belief that the gods hold with Mephistopheles:—

Blut ist ein ganz besondrer Saft;

and the shade of an ancestor, the spirits of the dead, are thought to love nothing so much as the warm, red sap of life. Blood was the original savor and charm of sacrifice, the most grateful part of the offering.

The sacrifice of animals was conducted with deliberate pomp. Horns of the victim were gilded, and garlands were hung about its neck and “silken flanks.” It was led thrice about the altar or else about the whole assembly; and was killed by the altar-stone amid song and dance of the worshippers, who were themselves decked out in festal array. The blood was caught in vessels or in a pit, and with this blood priests smeared sacred trees, altar and walls of the holy place, and sprinkled the assembled multitude. Entrails, heart, liver, lungs, were devoted to the gods; the rest was devoured by the people.¹ The cost of such a sacrifice was defrayed out of public funds, and was a state affair. Fire played its part, as usual, in ceremonial as well as practical purpose; and we may fancy that natural desire would prompt the association of a liberal drink-offering.

Sacrifice differed according to its purpose and occasion. It might be a matter of joy, revel, and feasting, or it might be the sterner rite to expiate a sin or avert some pestilence; in the former case, deity

¹ Pfannenschmid, p. 38 f.

would be an honored guest, but in the latter, the god would appear as an angry and exacting master. The latter would be extraordinary; the former a matter of regular recurrence, like the festal dates of Midsummer, Easter, and Yule, or the more frequent celebration of full or new moon. Feasts of this sort are to the present day bound up with religion; we hold them in our houses, and leave the church to provide for more purely devotional ceremonies.¹

The favorite animal for sacrifice seems to have been the horse, though ox, boar, and ram, were often used;² and the cock must have played a brave part.³ Color was of great importance, and the male sex was alone accepted. White horses, white cattle, were special favorites; and a host of cases could be cited where folk-lore has preserved this prejudice for the white.⁴ On the other hand, black animals — without speck of other color — were also chosen for sacrifice, and in witchcraft, residuary legatee of much old sacrifice-lore, black cats, cocks, and so on, are particularly popular. But the horse was prime favorite for sacrifice.⁵ In the famous passage of Tacitus⁶ which describes a battle between two German tribes for the possession of a salt-spring, we are told that the victors “had dedicated their opponents to Mars and Mercury;⁷ and in accordance with this vow, horses, men, all that

¹ The councils forbade “convivia in ecclesia preparare.” See Pfanenschmid, p. 341.

⁴ I have examined this peculiarity at some length in a paper “On the Symbolic Use of the Colors White and Black in Germanic Tradition,” *Haverford College Studies*, I. Philadelphia, 1889. See also Simrock, *Mythol.* 510 f.

⁵ See above, p. 40.

⁶ *Ann.* XIII. 57.

⁷ All prisoners were to be sacrificed to Tius and Woden.

the conquered possessed, were given to destruction." Here we have a sacrifice in the grand style; while "horses and men" has the true nomadic ring. A valued article of food, the horse must be a gracious offering to the gods, and was held as sacred among the Germans as it had been among the inhabitants of ancient Persia. Its use for sacrifice and for divinations continued down to modern times, witness two striking survivals, — one from Denmark, and one from Switzerland. In Thiele's *Folk-Tales of Denmark*,¹ we are told of a peasant who has a changeling foisted upon him, and cannot tell his own baby from the intruder. He takes a wild colt, and lays before it on the ground the two children in question. Looking at one child, the horse is fain to stroke it and remains very quiet; looking at the other, it rages and tries to trample the changeling to death. This is exactly in line with the statement of Tacitus² that the horse was used for divination, and that particular attention was paid to his neighings; while yet another parallel to the Danish anecdote is a ceremony of Slavonic worship practised on the island of Rügen nearly a thousand years ago, in which white horses sacred to the god Svantohvit were used as oracles after the following fashion. Before the temple was laid a triple row of lances, and it was noted whether the sacred horse first crossed the line with his left or his right foot.³ The second survival comes from Switzerland.⁴ In 1815, a peasant girl had St. Vitus' dance and, despite all ordinary remedies, failed to im-

¹ *Danmarks Folkesagn*, II. 276. ² *Germ.* X.

³ See Lippert, *Rel. d. eur. Cult.* p. 99.

⁴ H. Runge in *Zst. f. Mythol.* IV. 5.

prove under treatment. At last, the parents took a horse, burned a quantity of straw which was fastened to its neck, and then buried the horse alive in a deep pit along with a number of household implements. This was expected to cure the girl, no matter how desperate her case; it was a last appeal. A more agreeable form of this cult, however, was the sacrificial banquet, a highly popular festivity; as result, the eating of horse-flesh was sign of heathendom, and remains taboo down to the present. Heathen Swedes were called "horse-eaters" by their converted brethren.¹ Heads of horses and other sacrificial beasts, often the hides as well, were hung on trees as an offering to the gods.²

But it was not only horses that figured in the Tacitean account; men were included, as they were in all highly important sacrificial rites. Here, indeed, we enter the chamber of horrors in ethnology; for human sacrifice, to quote the words of Victor Hehn, "peers uncannily from the dark past of every Aryan race."³ To offer the dearest, the best, is a logical outcome of the doctrine of sacrifice; but the anthropologists tell us that the custom opens the door upon a passage which leads back to cannibalism itself. Originally a simple matter of give and take, sacrifice became later an act of propitiation or thanksgiving, with some faint ethical notions, perverted enough, shimmering about it. The Germans appear in history with sufficiently marked love of human sacrifice — witness the Cimbrians in Italy, the wholesale sacrifices among warring German tribes, and the direct testi-

¹ *D. M.* 38 f., 877.

² See Rochholz, *Glaube*, I. 251 f., II. 145 ff.

³ *Culturpfl.* p. 438, note.

mony of Tacitus, who gives us specific cases and a general summary. Of these instances, besides some already given, we may note the visit of Germanicus to the battle-field where Varus had been routed with his legions.¹ "There lay broken weapons, limbs of horses; on tree-trunks hung the heads. In neighboring groves were the barbarian altars whereon they had sacrificed the tribunes and centurions of the first rank;" while prisoners who had escaped the fate of that terrible day point out to Germanicus how many gallows were set up for the prisoners, and how many pits had been prepared. These pits were probably places in which the captives were buried alive. In the *Germania*,² Tacitus makes some general statements, and tells us that on "certain occasions"³ human victims are offered to "Mercury," while "Mars" and "Hercules" must content themselves with animals; and in the passage quoted above, he speaks with some abhorrence of the bloody⁴ and barbarous rites of the grove of the Semnoncs. A chain of evidence reaches from Tacitus down to the borders of the middle ages. In the fifth century, a king of the Goths, attacking Italy, vows, if he shall be favored with victory, to offer the conquered Christians to his god. Jordanis, in his history of the Goths,⁵ after saying that the race was so famous, men actually believed the god Mars to have been born among them, narrates concerning the worship of this deity that prisoners of war were sacrificed to him "in the belief that one who disposes the fortune of war ought to be propitiated by human blood." Moreover,

¹ *Ann.* I. 61.

² IX., XXXIX.

³ *Certis diebus.*

⁴ "cæsoque publice homine."

⁵ Cap. V.

to this "Mars" men promised a part of the booty, and captured weapons were hung upon trees in his honor. Procopius says that the Franks, in the year 539, after they had crossed the Po in their invasion of Italy, slew the women and children of the Goths and hurled their bodies into the river as first offerings of the war. "For," says Procopius, in pious and patriotic horror, "though these barbarians have become Christians, they still keep up many of their heathen customs, such as human sacrifice and other horrible offerings. . . ." ¹ The Saxons, says the Roman writer Sidonius Apollinaris, ² when they were about to leave the coast of Gaul and sail for home, sacrificed the tenth part of their captives, — with torture; and this is confirmed by later accounts. We have already noted a law of the heathen Frisians that whoso broke into a fane or sacred place should be sacrificed to the gods whose temples (*templa*) he had violated. ³ Dietmar of Merseburg relates that every ninth year the Danes celebrated a great festival at Lethra, their chief city, early in January, and sacrificed ninety-nine men and as many horses, — the "equi, viri," of Tacitus once more. Adam of Bremen tells of the sacrifice of men made at Upsala in Sweden, and of the corpses hung up in the sacred grove. ⁴

However, on occasion, "the dearest" could mean more than any of these things. In times of great distress, private or general, in sickness, danger, famine, pestilence, the alarm might rise to a point where no alien sacrifice could measure the height of calamity,

¹ Procop. *d. bell. Goth.* II. 25.

⁴ *D. M.* 39 ff.; Adam Br. IV. 27.

and some "dearest" thing of family or race must be offered to the god. Dearest of the dearest was the king. In olden times the sacrifice of the first-born seems to have been more or less common; and survivals meet us in Scandinavian legend, where the old ferocity lingered longest. Kings offer their sons. A certain monarch, in order to secure length of days, sacrifices one after another his nine sons to Odin.¹ In a time of famine, the Swedes sacrificed oxen the first year, without relief; then they took men; but the third year bringing no help, they offered up their king, Dômalði. In the *Hervararsaga*² we are told the following story of the brave but evil-minded Heidrek: "In a year of famine, the wise men, after they had made a sacrifice, said that the noblest child in the land would have to be offered. Heidrek promised to give his son on condition that every alternate man in the whole population should swear obedience to him; but with this great army he attacked King Harek and offered him and his men to Odin." To be sure, this was *niddingsværk*, clear treason; but the gods were apparently satisfied. P. E. Müller, mentioning the story that King Hakon offered up his son, refers to a number of similar cases.³ We have elsewhere occasion to note the custom of sacrifice at funerals,⁴ — slave, subject, wife, and friend.

The usual human sacrifice, however, was of captives, criminals, or slaves. The slaves who are em-

¹ See also *Ynglingatal*, in *C. P. B.* I. 247; Tylor, *P. C.* II. 403.

² P. E. Müller, *Sagabibliothek*, II. 559 f. ³ *Sagabibliothek*, III. 93.

⁴ See p. 319 f. The sacrifice of Odin "himself to himself" is usually put under this head; but, in spite of a writer in *P. B. Beitr.* Vol. XV., I think the arguments of Bugge convincing to the extent of regarding this episode as an imitation of the Christian account of the crucifixion.

ployed about the grove of Nerthus, Tacitus reminds us, are drowned in the lake; and the Roman's reason of secrecy is quite fanciful. It was probably an ordinary sacrifice. In the same way, when Alaric died and was buried in the Italian river-bed, such slaves as did the work were killed.¹ The execution of a criminal was originally a sacrifice to the god whose peculiar cult had been offended by the crime in question. Boundaries, as we have seen, were sacred places; and thither criminals were brought for execution.²

Everywhere survivals meet us based on the notion that a human life must be sacrificed at the beginning of any important piece of work. We have seen what the Franks, converted as they were, thought necessary before they crossed the Po in their invasion of Italy. The Vikings of Scandinavia, when they launched a new ship, would bind a victim to the "rollers" on which the vessel slipped into the sea, and thus redden the keel with sacrificial blood.³ That the doctrine of souls and manes-cult generally played its part in many of these rites, is quite beyond question. Lippert relates⁴ the story of a king of Siam who had built a new gate. He chose three men, set before them a sumptuous meal, gave them peculiar instructions about their ghostly watch by the gate, and forthwith had them beheaded and walled into the new structure.⁵ A modern shudder is all very

⁵ Other instances, Tylor, *P. C.* I. 106 ff. and note 1. I quote the second ed., London, 1873.

well; but in 1843 when a new bridge was to be built at Halle, the good folk vainly insisted that a child ought to be walled into it in order to insure good luck.¹ Legends are told of children who were thus sacrificed; and we hear of music to drown their cries, and caresses to soothe them in their last moments, that their angry spirits might not harbor spite against the survivors.

The horror of these things shades away, under Christian influence, into many a harmless superstition;² a lamb is built into the altar of a Danish church, a chicken is forced to run first over a new bridge and is then killed, and even in our own day it is best to send cat or dog into one's new house, before a member of the family enter. A gingerbread horse, eaten at a given time, replaces the sacrifice; and even the harmless bottle of champagne broken over the bow of a new-launched ship is not without relation to that victim once bound to the rollers of a Viking launch.

Some account of the details of human sacrifice is preserved to us from Scandinavian heathendom. Ari, born in 1067, was as near to the old Scandinavian rites as Beda was to the Anglo-Saxon,³—about seventy years from the arrival of the first Christian missionary. The altar, he tells us, was of stone, and had to be kept red and gleaming with sacrificial blood. “There is still to be seen the doom-ring wherein men were doomed to sacrifice. Inside the ring stands Thor's stone whereon those men who

¹ *D. M.* 956.

² *Ibid.* 956 ff.; Simrock, *Mythol.* 508.

³ This remark, and the quotation, are taken from *C. P. B.* I. 403. See also Petersen, 26 ff.

were kept for the sacrifice had their backs broken, and the blood is still to be seen in the stone." The blood was caught in kettles, and in old times may have been mixed with the beer or other drink of the assembly; sometimes it was baked in bread or cakes. The "kettles" were also used for boiling the flesh of cattle and similar offerings; and Grimm mentions the witches' kettle of later times. A homely superstition makes such a witches' kettle out of that reflection of a fire or a light which one sees through the window:—

Under the tree,
When fire out doors burns merrily,
There the witches are making tea.¹

Finally,—putting aside the hideous hints of cannibalism which ethnology thrusts upon us, — we must assume that the modern banquet, dinner, collation, whatever savor of food or drink is deemed indispensable for the beginning of any scheme, the welcome or despatching of any great personage, the celebration of any event, — all go back to the sacrificial feast. A fair measure of "heathendom" lurks in everybody, — not to speak of certain other instincts familiar to the savage mind.

Such were the gifts and fees which immortals had of man; in return they were expected to give him not only present help, but counsel and warning for the future, and this in oracular answer to his query. Much has been said already, in an incidental fashion, of the heathen ways of divination and auguries; a few words must be added, in this place, with regard

¹ Whittier, *Snowbound*.

to the distinctly religious ceremony. Casting lots was an appeal to the gods, and was carried into the daily round of life, being as applicable to the merest domestic details as to the greater problems. As regards the latter, tradition tells us that our forefathers in their German home cast lots to see what part of the crowded population should emigrate to Britain. Says one of them : —

In our fatherland
are curious customs.
Every fifteen years
is the folk assembled, . . .
and lots are thrown then.
On whom they fall
he shall fare from the land.
Five shall linger ;
the sixth shall leave,
out from his kin
to a land he kens not.¹

Further back in the history of our race, we meet an authentic instance of the ceremony, preserved by the pen of Cæsar. While Ariovistus and his army lay in camp, Cæsar sent to him certain envoys, C. Valerius Procillus and M. Mettius, to learn his intentions. But as they entered the camp of the German leader, he called out before all his host, and asked what the strangers had in view, — if they were come to spy? Scarcely had they begun to answer, when he ordered them to be flung in chains. After this, Cæsar offered battle daily, but Ariovistus would not respond except by skirmishes. Asking certain German prisoners the cause of this delay, Cæsar was told that the

¹ Layamon's *Brut*, Ms. Cot. Cal. 13, 654 ff.

women had declared, as result of the lots and divination, that if Ariovistus hoped for victory he must not give battle before the new moon. Cæsar forced a battle, and won it. The envoy Procillus, whom the Germans were carrying away in their flight, broke from his captors, and meeting Cæsar, told of a perilous sojourn in the barbarian camp. Thrice the lots had been cast in his presence to determine whether he should be put to death by fire, or kept until another occasion; and each time the lots were in his favor.¹ It is important to note that here, as among the Cimbrians, women — *matresfamilias* — determine and announce the decree of fate.

Most valuable is the information given us by Tacitus in regard to the process itself. Blocks are cut from the wood of a fruit-bearing tree, — one may think of the beech,² — marked with certain signs (*notæ*), and scattered at random on a white³ cloth; then they are picked up — that is, three of them, one by one — by the state-priest or by the father of the family, according as the ceremony is public or private, and the marks are interpreted. This interpretation gives a favorable or unfavorable answer to the question.⁴ Tacitus goes on to say that the noise and flight of birds are used here for divination as in other

¹ Cæs. B. G. I. 47-54. The same story is told of S. Willehad, who preached to the heathen Frisians in the eighth century. Lots were cast to decide whether he was to be punished by death or to be set free. On Heligoland, S. Willebrord had a like experience. Richthofen, *Fries. Rechtsgesch.* II. 375, 401.

² The traditional etymology of "book" from "beech" has been called in question. See Sievers in Paul's *Grdr.* I. 241.

³ The color is to be noted.

⁴ *Germ.* C. 10. Similar rites, partly Christianized, abound in the middle ages. See Richthofen, *Fries. Rechtsges.* II. 451.

countries; but peculiar to Germany is the custom of divining by means of horses, which are kept at public cost in the groves, and must be of snow-white color as well as spared from all ordinary work. When they draw the sacred chariot, either the king or the prince, along with the priest, accompanies them and marks the manner of their neighings. As yet another means of divination, the duel is mentioned which serves as a sign of the outcome of battle.¹

Returning to the bits of wood and the white cloth, we ask whether these mysterious marks (*notæ*) were, as scholars have assumed, the runes of which we hear and see so much in later times. Wimmer, in his great work on runes,² has shown that we have to deal with an imported alphabet, based on the Latin of the empire, and introduced into Germany about the end of the second century of our era. This would exclude the time of which Tacitus is writing. But it is quite possible that certain signs were in vogue among the Germans, imported from Roman or other neighbors and used purely for these purposes of divination; possible, too, that certain originally Germanic signs, rude pictures, or what not, which were called runes, were afterwards discarded for the wonderful Roman symbols. Indeed, as Sievers says,³ it is quite possible that the Roman alphabet was used in this hieratic fashion as early as the time of Tacitus. Roman coins were familiar enough; and it is significant that "rune" means the same as "mystery."

The runes were cut — "written" — in the wood,

¹ See above, p. 184.

² The German edition, 1887, contains the author's latest corrections.

³ Paul's *Grdr.* I. 239.

and in the first instance have a magic signification. We are told that the Alans used twigs which they marked with incantations;¹ and ample evidence is forthcoming for Germanic tribes, especially in Scandinavia. Müllenhoff² explained the process of divination by the fact that these runes were symbols of initial sounds, and it was the business of the priest to make out of his runes an alliterating verse which gave answer to the question of the hour. An Anglo-Saxon gloss translates *sortilegus* by *tanhlyta*,³ where *tan* is, of course, the "twig" of wood which Tacitus describes. But as the use of runes increased, they were carved on objects with the idea of an enduring magic, as upon the sword which should thus make the wound it gave a mortal one; or in different purpose, another inscription on a hostile sword would cause it to lose all virtue of destruction.⁴

These magic processes were forbidden by the church, and, coming thus under ban, laid the foundations of witchcraft and the black art generally. Enchanted cup and potion played a great part. It is significant that when Ælfric translates portions of the Bible into his native tongue, he omits that verse in the story of Joseph which points to divination on the part of the hero.⁵ Sometimes, however, the church allowed a harmless substitution, as when a leechdom directs the peasant how to cure his cattle. "Take two four-edged

⁵ Genesis, xlv. 4.

sticks"—evidently the old rite—"and write on either stick, on each edge, the paternoster to the end. . . ."¹ Saints' names, as was shown by the charm for barren fields, were used for a similar purpose. Parallel to the course from coaxing processes into modern magic, runs the path by which the old hostile incantation was developed into the dreaded "curse" of mediæval superstition. A curse which is meant to cut off the sufferer from all joys and privileges of life is preserved in Norse poetry, where the maiden Gerthr, beloved of Freyr, at first rejects his embassy of love, and is threatened with dire calamities; if she will not send the wished reply, then may so-and-so happen. Frightened at the sweep of this Ernulphian terror, the maid relents.² It would be of infinite value to the historian if he could win back the popular literature of England in the time of conversion and the early days of the church. It is recorded of Dunstan that "he loved the vain songs of ancient heathendom, the trifling legends, the funeral chants"; and it is said that he was accused of "sorcery." What we call "sorcery," the charming of person, of weapon, of place, the spell which brought ruin to all that touched the accursed object,—like the famous gold of the Nibelungs,—all this must have lain heavily on Germanic life. In what race has not the same period of development found itself clogged with this weight of superstition?

The chant, or singing, which lingers in these names of charm and incantation, is certainly a relic of the old choral ceremony about a heathen altar. Poetry begins as handmaid of religion, and the

¹ Cockayne, I. 387.

² *Skirnismál*, 25 ff.

rhythmic element lives yet in our commonest survivals,—as when children determine who shall be the mysterious “It” of a game. So the song or even the murmur of sorcery; so the “backward mutter of dissevering power” to undo the operation of magic itself. If we could only trace aright historical connections, we should find everywhere about us, imbedded in custom or tradition, the shards of our broken heathendom. Of these, the saddest to study are those that come under the head of witchcraft,—a subject that lies quite aside from our present purposes.

CHAPTER XVI

THE HIGHER MOOD

Public and private standard of morals—Ideals of the race—
Æsthetics—Germanic faith—Notions about a future life—Con-
clusion.

CONDUCT is of prime importance in any modern notion of religion,—that is to say, the conduct of each individual. Early religion looks to the conduct of a tribe or race in its relation to ancestral spirits or protecting gods; grave and altar must be served after the established form. So, too, the family must, as a family, observe the rites of traditional cult. Standards of conduct for persons would therefore take this collective and formal character, and the ideal virtues of our forefathers must have followed the same broad way.

To be sure, this statement will not go unchallenged. Professor Robertson Smith, in his book on *Early Semitic Religion*,¹ assumes not the family, but the kin as social unit, and says that the earliest kin-bond was maternal. Hence was developed the origin of personal ethics; while, on the other hand, religion itself “arose out of a perception of the rela-

¹ Unfortunately, only a summary can be used here, taken from *The Spectator* for October 11, 1890.

tions of the community to its environment animate and inanimate"; nor was it originally "a trembling worship of dismal and malevolent deities," but rather was addressed to friendly gods.

However all this may be, a study of Germanic traditions and literature will show us that such scheme of ethics as our ancestors possessed was what we have supposed would naturally result from a state founded on the family basis. Of this foundation we have abundant evidence; and the ethical system is in full harmony with the constitution of the state. The heroic legends of Germany will help us in this respect; for here shine in a setting of poetry the ideals of the race itself. Poetry gives us just the necessary mixture of imagination working in lines laid down by the development of the race, and facts which are taken from the records of its best moments. Hence the ideal virtues in the ideal figures of the song. Such is the view of Uhland in his valuable researches;¹ and with this purpose we examine the records. As most conspicuous among the private virtues we find generosity, hospitality,² and chastity. Chastity is eminently an individual virtue; but a moment's reflection will show that it is absolutely bound up with the prosperity of such a family life as Tacitus describes to us. As the standing reproach of a man is cowardice, so we find that when women are reviled, like the goddesses in the *Lokasenna*, it is for unchastity. The actual evidence for the virtue of Germanic

¹ *Kl. Schr.* I. 211 ff. may be found a succinct statement of his views.

² As to hospitality combined with sense of national honor, see the account of the Gepidæ, who refused to give up a guest at the command of Justinian, and so went to certain ruin. See also Dahn, *Urgeschichte d. germ. und rom. Völker*, I. 39.

women is strong, and has been discussed above; for manly purity, as well as the innocent frankness which governed the relations of younger men and women, Cæsar gives some valuable testimony. Along with this must go the fact that indecency has almost no footing whatever in Germanic literature of the heathen type.¹ When obscenities occur, they are put in the mouth of giants, uncouth, raw, and despicable creatures. Some of this freedom from indecency, indeed, may go to the credit of monkish scribes; but not all of it. A stern purity, native and rough, is the note of old Germanic song.

Softness of temper was not a Germanic virtue. *Béowulf* is extraordinarily mild and patient, as befits a hero-god of such sunny origins; but much nearer to the Germanic heart was Thor, "impiger, iracundus, inexorabilis, acer," with those knuckles whitening as he grasps the hammer in rage, — a touch that mightily pleased Carlyle. We therefore exclude patience from our eulogy, but all the more strenuously may we insist upon Germanic loyalty and faithfulness. Germanic family-life, as Uhland remarks,² had two periods. First is the settled or partly settled life described by Tacitus; the group of buildings by and for themselves, isolated, the abode of a single family or minor clan. Second is the artificial family of the period of conquest, the chieftain and his followers forming a new relation. In both cases, however, loyalty is the cardinal virtue. We have seen above how stern were the demands upon this loyalty in the case of blood-relationship, and how equally binding was

¹ See *Literaturblatt f. germ. und rom. Phil.*, February, 1891, sp. 47.

² *Kl. Schr.* I. 214 ff.

the obligation when leader and vassal took the place of kin and kin.¹ Loyalty is the key-note of Germanic life and Germanic virtue ; but it is a collective rather than an individual characteristic, and expresses itself in literature not by sharply drawn men and women, but by types. Not only do we miss the devotion of mediæval chivalry and the tenderness of modern love, but even the charms of friendship find no room in hearts filled with the obligations of the warrior and the clansman ; Germanic traditions tell us no tale of Orestes and Pylades. So, too, with the other graces of life. The remorseless strain and struggle of that time left little or no leisure, even if they had found the desire, for one to cultivate the sense of beauty or any other of those feelings which we comprehend under the modern name of æsthetics. Crude forms of art, like the paint upon a house or the woven lines of an arm-ring, incipient adornment of person or of weapon, — these the German knew ; but the sense of quiet beauty was foreign to his mind. In his poetry, in those kennings which gave him almost his only chance for description, we get a few glimpses at the nature which surrounded him ; but it is the dash of waves, the hiss of hail and snow upon a wintry ocean, howl of wind and storm, sweep of huge bird of prey hovering “dewy-feathered” in the air and eager for carrion, — battle-pieces, we must call them, but no still-life at all. Save in one timid and perhaps interpolated picture of a sunny landscape, the quiet which reigns in the Germanic description of nature is a quiet of desolation. Such is the powerful passage in

¹ “Die Treue, der Grundtrieb des germanischen Lebens.” Uhland, p. 221.

which Hrothgar describes to *Béowulf* the haunt of Grendel,¹—

a dismal land,
 wolf-haunted cliffs and windy headlands,
 fen-ways fearful, where flows the stream
 from mountains gliding 'neath gloom of the rocks,
 underground flood. Not far is it hence,
 by measure of miles, that the mere expands,
 and o'er it the frost-bound forest hanging,
 sturdily rooted, o'ershadows the wave.
 In the dark of night is a dread to see,
 fire on the waters: no wight so brave
 of the sons of men who will search that flood!
 Nay, though the heath-pacer, harried by dogs,
 the hornéd stag, this holt should seek,
 by hounds far driven, — his dear life here,
 on the brink he yields ere he braves the plunge
 in those dismal waters!

Moreover, the placid beauty of harvest seems to have been as unfamiliar as the fruits which it is meant to bring; "they know," says Tacitus, "as little of the name as of the bounties of Autumn." Vernon Lee, in her *Euphorion*,² points out that this ignoring of autumnal beauty continued through the middle ages, despite their extravagant and ceaseless laud of spring: "Of autumn . . . of the standing corn, the ripening fruit of summer, . . . the middle ages seem to know nothing." But we must return to our study of Germanic ethics.

As we approach modern times, the primitive ideals, while not removed, are changed. The heroic stature is lost, and we begin to meet maxims of prudence, bits of shrewd advice, canny standards of

¹ *Béow.* 1357 ff.

² I. 119.

action where the right is the practical. Even impulsive Scandinavia shows this. Maurer, in his well-known work,¹ gives a summary of Norse ethics in the heathen age. He finds on the one hand prudence, shrewdness, every-day wisdom; on the other, a sense of duty and the necessity of following this line irrespective of consequences. Maxims of life begin to meet us, even in this period, of a character surprisingly like the philosophical wisdom of the middle ages, with its passion for the golden mean. Prudence is extolled with the fervor of a Juvenal. Keep the "mean"; avoid gluttony and drunkenness (a parlous reference); trust not in riches; do not talk with fools; never confide in women;² and above all, remember that nothing can turn aside the weapon of fate. Vengeance is a religion, and human suffering excites little pity; it was treachery that called for actual disgrace and blame. Cruelty was not so bad if it were only open; although the fearful scenes at the court of Ermanric, so famous in our old heroic legends, seem to have roused a shudder in all Germanic bosoms. The little poem about Déor, our oldest English lyric, speaks of Ermanric's "wolfish" disposition. The sneak, the secret foe, is detestable; and hidden treachery is crime of crimes. Steal if you can and must; but steal openly. Generosity and hospitality are, of course, cardinal virtues. Most important of all, we must note that these various virtues stand in almost no connection with the re-

¹ *Bek. d. Norw. St.* II. 148 ff. Gnostic poetry was very popular in Germanic literature, and is evidently based on old traditions. Several poems of the sort are to be found in Norse and Anglo-Saxon.

² *Havamál*, 83-89. Mostly, as Meyer remarks (*Altgerm. Poesie*, p. 44), the Gnostic poetry describes rather than commands.

ligion of the day, which was a matter of ceremony and ritual.¹

What has been said of Norse ethics will largely apply to our Anglo-Saxon ancestors. As time goes on, our laws betray the increase of that sense for practical things and that thrifty independence which have clung to the Englishman everywhere. To mend bridges and roads, to pay taxes, to fight in the militia, to be allowed to rule unimpeded over his private affairs,—this standard of duty develops itself early in English history. For the more personal side of ethics, it is under Christian influences that we get our first full view of the Englishman; nevertheless, if the tender shoot is to be judged by the sturdy tree, the story of such a man as King Alfred is enough to shed back a flood of light and praise upon the earliest growth of English character.

Aside from ethics proper, there was a decided vein of philosophy in the old Germanic temperament. The German loved to moralize, to point out the ways of fate, to summarize existence; after his rude fashion he made epigrams, and these strung together in poetical form² were doubtless a favorite department of his literature. Such a recitation, by some graver minstrel, took the place of a later court-sermon.

When restraint of human passion, or extraordinary effort of human will, is to be obtained, ethics must

¹ Maurer, II. 188.

² With critical reserve we may consider in this light the so-called "Sermon" of Hrothgar in *Béowulf*, as well as the poems on "Man's Fate," "Man's Gifts," and the like, to be found in Grein's *Bibliothek d. Ags. Poesie*.

lean more or less upon religious sanctions; and on the border-land of cult and myth we find the province of belief in some adjustment of human history, even in some scheme of reward or punishment, expected in a life to come. Much of this belongs to the doctrine of the soul-land, elsewhere treated.¹ It is our place to look at the wider conception of a continued responsibility for acts of this life. The notion of future punishment is nowhere sharply defined; ² gloom and desolation are recognized by our forefathers as characteristic of Hel's kingdom, but it is no place of torture. Dietrich, indeed, insisted on the Scandinavian water-hell, and based his belief on these lines of the sibyl's prophecy where she sees "a hall . . . by the corpse-strand," where poison-drops fall through the roof and the walls are made of serpents' backs; and where she sees, "wading through raging streams treacherous men and murderous," and the wolf tearing men asunder. But there are strong reasons against accepting this conclusion. For a general objection, it may be urged that dualism is foreign to the spirit of Germanic heathendom; and that evil powers, as Jacob Grimm remarks, are not classified and set in order against the powers of good. For a specific reason, we may call in question the originality of the quotation just made from the Voluspa. Bugge is by no means alone in his attack, and a defence by Müllenhoff, the strongest of his

¹ See p. 326 f.

² Maurer denies it altogether for Scandinavian heathendom. *Bek. d. Norw. St.* II. 74. That "general Germanic belief" in the end of the world by fire, the Muspelli, is now asserted by Bugge to have been imported along with other scraps of the new faith. For the older view, see Müllenhoff, *Deutsche Alterthumskunde*, V. I. 66 f.

faith, has failed to convince the best critics that in the *Voluspa* we are dealing with untainted Germanic heathendom. E. H. Meyer in his book on this subject,¹ has come to conclusions as fatal as those of Bugge. So we are forced to reject this part of the sibyl's prophecy from our notion of Germanic faith. The make-up of the picture, and the conception of misery as united with darkness, wet, and cold, are undoubtedly genuine; but the moral assumption is not so.

It is true, however, that our ancestors, like their Aryan kinsmen the world over, believed in an underworld.² The literal caves of the dead were extended into a figurative kingdom of the dead, the realm of Hel, the "concealing" goddess. Dark, cheerless, cold, this was no place of torture.³ She herself is relentless, and gives up no soul that once enters her domain; but punishments—and the Germanic mind would have been quick enough to heap them in fullest measure, had they belonged to the conception of the place—are nowhere to be found. So, too, with rewards. Under the stress of Viking life, with its ceaseless brawls and revel, its courage and danger, grew up a belief which has been sung and told into a system, and now stands in most people's eyes as the corner-stone of old Norse faith,—the belief in that Valhalla whither Odin's maidens led the slain, where fight and feast alternated in an agreeable perspective down the future, and whither no thrall or man of peace might win. In point of fact, much of

¹ *Völuspa*, Berlin, 1888.

² Schullerus, *Zur Kritik d. Valhollglaubens*, P. B. Beitr. XII. 258.

³ *D. M.* 667.

this amiable belief is of foreign, or at least of very late origin.¹ The oldest lays of the Edda know nothing about it; the old sagas know nothing about it.² It is a strange medley, like the life that gave it currency, and was fashioned into its present shape in the ninth or tenth century. The wandering seamen and warriors brought back scraps of foreign lore, incongruous and wonderful bits of legend; as they told their tales, huge temples or churches which they had actually seen, blended in memory with half-understood teachings of the new religion, and all was set in the Norse framework, Norse verse, and Norse manner. One writer goes so far as to say that the Valhalla, a golden hall with countless doors and stately outline, is a loan from the Revelation of St. John, — is the New Jerusalem in Scandinavian disguise.³ One suggestion, however, made long ago by Wilhelm Müller,⁴ deserves respectful mention. He regards Valhalla as the type of a palace where earthly kings of that period were wont to dwell, surrounded by their retainers. In this new Valhalla would be a “magnified and non-natural” Germanic hall, embellished by the dazzled and confused fancy, the half-comprehended world-lore, of the Viking age.

But let us go back to our primitive German. What faith had he about a hereafter? Vaguely, — as indeed all his philosophy lacked sharp definitions, — the German believed in a future world of

¹ Schullerus and H. Petersen, work quoted, p. 98 f.

² Schullerus, p. 241.

³ Schullerus, p. 267. He assumes oral tradition, not book-lore, as source of the borrowing.

⁴ *System*, p. 394.

spirits.¹ Of his own doing in that world he had very dim notions; his care during life was to soothe and coax his future fellow-citizens who had gone before him. Without talent or taste for introspection, he nevertheless began in the earliest moments of awakening thought to muse about the issues of life and death. In his rough, blundering way, he doubtless did what De Quincey in a memorable passage declares all men must do who think at all about these things,—he must have held “some tranquillizing belief as to the future balances and the hieroglyphic meanings of human suffering.” That is all we can say.

In speaking of Germanic belief, we have already crossed that border which separates the real from the ideal. But further we may not follow our ancestors into the ideal world which every active and aspiring race has fashioned,—the world of poetry and legend and myth. Such a subject demands a volume for itself, and needs to be studied with more than ordinary care. So far as explanation and interpretation are concerned, it is easy to make the shattered relics of Germanic myth tell almost any tale we may desire to hear. Inexorable criticism and thorough philological knowledge of this material, joined with the insight, imagination, and wide comparative glances of a master of literary history, are indispensable for the man who at this late hour is fain to tread in the path marked out by Jacob Grimm and almost untrodden since his day. Myth-mongers there have been in plenty,—men with “interpretations,” who will

¹ There is no doubt of this. See Müllenhoff, *Deutsche Alterth.* V. I. 69.

tell us that Norse Idun was grass, or hay, or a star, or poetry; but men who sought the heart of Germanic myth itself have not appeared,—save one. Irascible, arrogant, Müllenhoff nevertheless redeemed his many faults by dint of labor, strength, and a rugged loyalty to his own ideals. He was of the old breed of scholars; he loved poetry as well as paradigms; and no keener or more loving glance than his ever sought to pierce the mist of our Germanic origins.

¹ The statement of the text is little, if at all, affected by such a case as that of Walter and Hagen in the Waltharius Lay. For the sake of their old friendship, Hagen long refuses, even at the bidding of his king, to fight Walter; and the latter does his best in the combat to spare Hagen's nephew. The sentiment of the situation, however, is largely due to the poet, who had plenty of classical models to influence him; and the facts are easily referred to the blood-brotherhood, upon which, as Grimm points out (*Lateinische Gedichte des X und XI JH.*—p. 78), the heroes had long before entered.

HISTORY AND BIOGRAPHY.

THE DAWN OF HISTORY. An Introduction to Pre-Historic Study. Edited by C. F. KEARY. 12mo, \$1.25.

This work treats successively of the earliest traces of man in the remains discovered in caves or elsewhere in different parts of Europe; of language, its growth, and the story it tells of the pre-historic users of it; of the races of mankind, early social life, the religions, mythologies, and folk-tales of mankind, and of the history of writing.

NATION.—“The book may be heartily recommended as probably the most satisfactory summary of the subject that there is.”

BOSTON SAT. EVE. GAZETTE.—“A fascinating manual, without a vestige of the dullness usually charged against scientific works. In its way, the work is a model of what a popular scientific work should be.”

THE ORIGIN OF NATIONS. By Professor GEORGE RAWLINSON, M.A. 12mo, with maps, \$1.00.

The first part of this book, *Early Civilizations*, discusses the antiquity of civilization in Egypt and the other early nations of the East. The second part, *Ethnic Affinities in the Ancient World*, is an examination of the ethnology of Genesis, showing its accordance with the latest results of modern ethnographical science.

CONGREGATIONALIST.—“A work of genuine scholarly excellence, and a useful offset to a great deal of the superficial current literature on such subjects.”

MANUAL OF MYTHOLOGY. For the Use of Schools, Art Students, and General Readers. Founded on the Works of Petiscus, Preller, and Welcker. By ALEXANDER S. MURRAY, Department of Greek and Roman Antiquities, British Museum. With 45 Plates on tinted paper, representing more than 90 Mythological Subjects. Reprinted from the Second Revised London Edition. Crown 8vo, \$1.75.

THE CLEVELAND HERALD.—“It has been acknowledged the best work on the subject to be found in a concise form, and as it embodies the results of the latest researches and discoveries in ancient mythologies, it is superior for school and general purposes as a hand book to any of the so-called standard works.”

THE BOSTON JOURNAL.—“Whether as a manual for reference, a text book for school use, or for the general reader, the book will be found very valuable and interesting.”

EPOCHS OF HISTORY.

CHARLES KENDALL ADAMS, *President of Cornell University*.—"A Series of concise and carefully prepared volumes on special eras of history. Each is devoted to a group of events of such importance as to entitle it to be regarded as an epoch. Each is also complete in itself, and has no especial connection with the other members of the series. The works are all written by authors selected by the editor on account of some especial qualifications for a portrayal of the period they respectively describe. The volumes form an excellent collection, especially adapted to the wants of a general reader."

NOAH PORTER, *President of Yale College*.—"The 'Epochs of History' seem to me to have been prepared with knowledge and artistic skill to meet the wants of a large number of readers. To the young they furnish an outline or compendium which may serve as an introduction to more extended study. To those who are older they present a convenient sketch of the heads of the knowledge which they have already acquired. The outlines are by no means destitute of spirit, and may be used with great profit for family reading, and in select classes or reading clubs."

BISHOP JOHN F. HURST, *Ex-President of Drew Theological Seminary*.—"It appears to me that the idea of Morris in his Epochs is strictly in harmony with the philosophy of history—namely, that great movements should be treated not according to narrow geographical and national limits and distinction, but universally, according to their place in the general life of the world. The historical Maps and the copious Indices are welcome additions to the volumes."

THE NATION.—"The volumes contain the ripe results of the studies of men who are authorities in their respective fields."

EPOCHS OF ANCIENT HISTORY. A series of books narrating the History of Greece and Rome, and of their relations to other countries at successive epochs. Edited by Rev. G. W. COX, and CHARLES SANKEY, M.A. Eleven volumes, 16mo, with 41 Maps and Plans. Sold separately. Price per vol., \$1.00. The set, Roxburgh style, gilt top, in box, \$11.00.

TROY—ITS LEGEND, HISTORY, AND LITERATURE. By S. G. W. BENJAMIN

THE GREEKS AND THE PERSIANS. By G. W. Cox.

THE ATHENIAN EMPIRE. By G. W. Cox.

THE SPARTAN AND THEBAN SUPREMACIES. By CHARLES SANKEY.

THE MACEDONIAN EMPIRE. By A. M. CURTEIS.

EARLY ROME. By W. IHNE.

ROME AND CARTHAGE. The Punic Wars. By R. BOSWORTH SMITH.

THE GRACCHI, MARIUS AND SULLA. By A. H. BEESLEY.

THE ROMAN TRIUMVIRATES. By CHARLES MERIVALE.

THE EARLY EMPIRE. By W. WOLFE CAPES.

THE AGE OF THE ANTONINES. By W. WOLFE CAPES.

STANDARD TEXT BOOKS.

EPOCHS OF MODERN HISTORY. A series of books narrating the History of England and Europe at successive epochs subsequent to the Christian era. Edited by **EDWARD E. MORRIS**. Seventeen volumes, 16mo, with 74 Maps, Plans, and Tables. Sold separately. Price per vol., \$1.00. The set, Roxburgh style, gilt top, in box, \$17.00.

THE BEGINNING OF THE MIDDLE AGES. By R. W. CHURCH.

THE NORMANS IN EUROPE. By A. H. JOHNSON.

THE CRUSADES. By G. W. COX, M.A.

THE EARLY PLANTAGENETS. By WM. STUBBS.

EDWARD III. By W. WARBURTON.

THE HOUSES OF LANCASTER AND YORK. By JAMES GAIRDNER.

THE ERA OF THE PROTESTANT REVOLUTION. By FREDERIC SEEBOHM. With Notes on Books in English relating to the Reformation. By Prof. GEORGE P. FISHER, D.D.

THE EARLY TUDORS. Henry VII.; Henry VIII. By C. E. MOBERLY.

THE AGE OF ELIZABETH. By M. CREIGHTON.

THE THIRTY YEARS' WAR, 1618-1648. By SAMUEL RAWSON GARDINER.

THE PURITAN REVOLUTION. By SAMUEL RAWSON GARDINER.

THE FALL OF THE STUARTS. By EDWARD HALE.

THE AGE OF ANNE. By EDWARD E. MORRIS.

THE EARLY HANOVERIANS. By EDWARD E. MORRIS.

FREDERICK THE GREAT. By F. W. LONGMAN.

THE FRENCH REVOLUTION AND FIRST EMPIRE. By WILLIAM O'CONNOR MORRIS. With Appendix by ANDREW D. WHITE, LL.D.

THE EPOCH OF REFORM, 1830-1850. By JUSTIN MCCARTHY.

THE HISTORY OF ROME, from the Earliest Time to the Period of Its Decline. By Dr. THEODOR MOMMSEN. Translated, with the author's sanction and additions, by W. P. DICKSON, D.D., LL.D. With an Introduction by Dr. Leonhard Schmitz. Reprinted from the Revised London Edition. Four volumes crown 8vo, gilt top. Price per set, \$8.00.

LONDON TIMES.—“A work of the very highest merit; its learning is exact and profound; its narrative full of genius and skill; its descriptions of men are admirably vivid. We wish to place on record our opinion that Dr. Mommsen's is by far the best history of the Decline and Fall of the Roman Commonwealth.”

DR. SCHMITZ.—“Since the days of Niebuhr, no work on Roman History has appeared that combines so much to attract, instruct, and charm the reader. Its style—a rare quality in a German author—is vigorous, spirited, and animated. Professor Mommsen's work can stand a comparison with the noblest productions of modern history.”

CHARLES SCRIBNER'S SONS'

AN ADDITION TO THEODOR MOMMSEN'S HISTORY OF ROME.

THE PROVINCES OF THE ROMAN EMPIRE. From Cæsar to Diocletian. By THEODOR MOMMSEN. Translated with the author's sanction and additions, by William P. Dickson, D.D., LL.D. With ten maps, by Professor Kiepert. 2 vols., 8vo, \$6.00.

CONTENTS: The Northern Frontier of Italy—Spain—The Gallic Provinces—Roman Germany and the Free Germans—Britain—The Danubian Lands and the Wars on the Danube—Greek Europe—Asia Minor—The Euphrates Frontier and the Parthians—Syria and the Land of the Nabatæans—Judea and the Jews—Egypt—The African Provinces.

N. Y. SUN.—“Professor Mommsen's work goes further than any other extant, or now looked for, to provide us with a key to the mediæval history of the Mediterranean world.”

PROF. W. A. PACKARD, in *Presbyterian Review*.—“The author draws the wonderfully rich and varied picture of the conquest and administration of that great circle of peoples and lands which formed the empire of Rome outside of Italy, their agriculture, trade, and manufactures, their artistic and scientific life, through all degrees of civilization, with such detail and completeness as could have come from no other hand than that of this great master of historical research in all its departments, guided by that gift of historical imagination, for which he is equally eminent.”

THE HISTORY OF GREECE. By Prof. Dr. ERNST CURTIUS. Translated by Adolphus William Ward, M. A., Fellow of St. Peter's College, Cambridge, Prof. of History in Owen's College, Manchester. Uniform with Mommsen's History of Rome. Five volumes, crown 8vo, gilt top. Price per set, \$10.00.

LONDON ATHENÆUM.—“Professor Curtius' eminent scholarship is a sufficient guarantee for the trustworthiness of his history, while the skill with which he groups his facts, and his effective mode of narrating them, combine to render it no less readable than sound. Prof. Curtius everywhere maintains the true dignity and impartiality of history, and it is evident his sympathies are on the side of justice, humanity, and progress.”

LONDON SPECTATOR.—“We cannot express our opinion of Dr. Curtius' book better than by saying that it may be fitly ranked with Theodor Mommsen's great work.”

N. Y. DAILY TRIBUNE.—“As an introduction to the study of Grecian history, no previous work is comparable to the present for vivacity and picturesque beauty, while in sound learning and accuracy of statement it is not inferior to the elaborate productions which enrich the literature of the age.”
